## **Cranial and Postcranial Skeletal Remains from Easter Island**

Rupert Ivan Murrill, 1968-07-12 Cranial and Postcranial Skeletal Remains from Easter Island was first published in 1968. Minnesota Archive Editions uses digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions. An archaeological expedition to Easter Island and the East Pacific was organized and financed by Thor Heyerdahl, the Norwegian anthropologist of Kon-Tiki fame, in 1955 -1956. Although Professor Murrill was not a member of the expedition, he was asked to study and analyze, from the standpoint of physical anthropology, the human skeletal material which was found by the expedition in excavations on Easter Island. Professor Murrill conducted a detailed examination of the remains, using such methods as metrical measurements, morphological observations, and analyses of blood group gene frequencies. In this book he presents the factual data resulting from his study, much of it in the form of comprehensive tables, and his conclusions. The findings throw significant light on the question of where the prehistoric Easter Islanders came from. Contrary to theories favored by Mr. Heyerdahl and others that these people

and their culture derived from prehistoric settlements on the west coast of South America, Professor Murrill concludes that the Easter Island people were Polynesian in origin and that they may have come from the Marquesas Islands. He finds it unlikely that a Negroid migration (possibly from Melanesia) antedated a Polynesian one to Easter Island and, on the basis of his evaluation of blood group systems, he suggests that the Polynesian and the American Indian types may be derived from the same gene pool in East Asia. The book is illustrated with photographs, drawings, and maps, and there is a substantial bibliography.

### **20 Fun Facts About Easter Island Heather Moore**

Niver,1900-01-01 On an island in the Pacific Ocean more than 1,000 miles from the nearest habitable location, ancient people constructed hundreds of enormous stone heads. No one is sure exactly how they moved the giant statues into place. In fact, no one really knows how people got there in the first place! Readers are sure to enjoy learning about the mystery surrounding Easter Island. Colorful images of the moai, flora, fauna, and more help transport readers to this amazing world wonder.

The Statues that Walked Terry Hunt,Carl Lipo,2011-06-21 The monumental statues of Easter Island, both so magisterial and so

forlorn, gazing out in their imposing rows over the island's barren landscape, have been the source of great mystery ever since the island was first discovered by Europeans on Easter Sunday 1722. How could the ancient people who inhabited this tiny speck of land, the most remote in the vast expanse of the Pacific islands, have built such monumental works? No such astonishing numbers of massive statues are found anywhere else in the Pacific. How could the islanders possibly have moved so many multi-ton monoliths from the quarry inland, where they were carved, to their posts along the coastline? And most intriguing and vexing of all, if the island once boasted a culture developed and sophisticated enough to have produced such marvelous edifices, what happened to that culture? Why was the island the Europeans encountered a sparsely populated wasteland? The prevailing accounts of the island's history tell a story of self-inflicted devastation: a glaring case of eco-suicide. The island was dominated by a powerful chiefdom that promulgated a cult of statue making, exercising a ruthless hold on the island's people and rapaciously destroying the environment, cutting down a lush palm forest that once blanketed the island in order to construct contraptions for moving more and more statues, which grew larger and larger. As the population

swelled in order to sustain the statue cult, growing well beyond the island's agricultural capacity, a vicious cycle of warfare broke out between opposing groups, and the culture ultimately suffered a dramatic collapse. When Terry Hunt and Carl Lipo began carrying out archaeological studies on the island in 2001, they fully expected to find evidence supporting these accounts. Instead, revelation after revelation uncovered a very different truth. In this lively and fascinating account of Hunt and Lipo's definitive solution to the mystery of what really happened on the island, they introduce the striking series of archaeological discoveries they made, and the path-breaking findings of others, which led them to compelling new answers to the most perplexing questions about the history of the island. Far from irresponsible environmental destroyers, they show, the Easter Islanders were remarkably inventive environmental stewards, devising ingenious methods to enhance the island's agricultural capacity. They did not devastate the palm forest, and the culture did not descend into brutal violence. Perhaps most surprising of all, the making and moving of their enormous statutes did not require a bloated population or tax their precious resources; their statue building was actually integral to their ability to achieve a delicate balance of sustainability. The

Easter Islanders, it turns out, offer us an impressive record of masterful environmental management rich with lessons for confronting the daunting environmental challenges of our own time. Shattering the conventional wisdom, Hunt and Lipo's ironclad case for a radically different understanding of the story of this most mysterious place is scientific discovery at its very best.

### **Skeletal Biology of the Ancient Rapanui (Easter Islanders)**

Vincent H. Stefan, George W. Gill, 2016-01-07 Disseminating what is currently known about the skeletal biology of the ancient Rapanui and placing it within the wider context of Polynesian skeletal variation, this volume is the culmination of over thirty years of research into the remotely inhabited Easter Island. Compiling osteological data deriving from Rapanui skeletal remains into one succinct analysis, this book demonstrates how the application of modern skeletal biology research techniques can effectively be employed to address questions of human population origins and microevolution. Craniometrics and DNA analysis are used to provide indications as to Rapanui ancestral lineage. Evidence is presented in a user-friendly manner to allow researchers and graduates to critically analyse the current knowledge of prehistoric

Rapanui skeletal variation. An important resource providing valuable evidence from human biology that modifies earlier archaeological and cultural anthropological views, this book will stimulate further research into the Rapanui.

**Second Growth** Robin L. Chazdon, 2014-05-23 For decades, conservation and research initiatives in tropical forests have focused almost exclusively on old-growth forests because scientists believed that these “pristine” ecosystems housed superior levels of biodiversity. With *Second Growth*, Robin L. Chazdon reveals those assumptions to be largely false, bringing to the fore the previously overlooked counterpart to old-growth forest: second growth. Even as human activities result in extensive fragmentation and deforestation, tropical forests demonstrate a great capacity for natural and human-aided regeneration. Although these damaged landscapes can take centuries to regain the characteristics of old growth, Chazdon shows here that regenerating—or second-

growth—forests are vital, dynamic reservoirs of biodiversity and environmental services. What is more, they always have been. With chapters on the roles these forests play in carbon and nutrient cycling, sustaining biodiversity, providing timber and non-timber products, and integrated agriculture, *Second Growth* not only offers a thorough and wide-ranging overview of successional and restoration pathways, but also underscores the need to conserve, and further study, regenerating tropical forests in an attempt to inspire a new age of local and global stewardship.

**The Influence of Teeth, Diet, and Habits on the Human Face** D. M. Davies, 2013-10-22 *The Influence of Teeth, Diet, and Habits on the Human Face* discusses the relation between dental health, diet, and habits to the facial characteristics of humans. The book is comprised of 12 chapters that cover the various aspects of the relationship of the said variables. The text first compares the facial traits of primitives and civilized peoples, and then proceeds to differentiating the characteristics of primitive and modern diets. The next chapter discusses disparity between meat and vegetable diet.

The next five chapters deal topics related to dental health, such as tooth diseases among primitive tribes, establishing racial links through analyzing teeth, and some unusual dental customs. The remaining three chapters present the conclusion, review of related literature, and methodology of the study. The book will be of great interest to dentists, physicians, anthropologists, and sociologists.

*Guns, Germs, and Steel: The Fates of Human Societies* Jared Diamond, 1999-04-17 Fascinating.... Lays a foundation for understanding human history.—Bill Gates In this artful, informative, and delightful (William H. McNeill, New York Review of Books) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and then developed religion --as well as nasty germs and potent weapons of war --and adventured on sea and land to conquer and decimate preliterate cultures. A major advance in our understanding of human societies, *Guns, Germs, and Steel* chronicles the way that the modern world came to be and stunningly dismantles racially based theories of human history. Winner of the Pulitzer Prize, the Phi Beta Kappa Award in Science, the Rhone-Poulenc Prize, and the Commonwealth club of California's Gold Medal.
