CAD/CAM Robotics and Factories of the Future
Birendra Prasad,2012-12-06 This volume is about automation - automation in design, automation in manufacturing, and automation in production. Automation is essential for increased productivity of quality products at reduced costs. That even partial or piecemeal automation of a production facility can deliver dramatic improvements in productivity has been amply demonstrated in many a real-life situation. Hence,

currently, great efforts are being devoted to research and development of general as well as special methodologies and tools for automation. This volume reports on some of these methodologies and tools. In general terms, methodologies for automation can be divided into two groups. There are situations where a process, whether open-loop or closed-loop, is fairly clearly understood. In such a situation, it is possible to create a mathematical model and to prescribe a mathematical procedure to optimize the output. If such mathematical models and procedures are computationally tractable, we call the corresponding automation - algorithmic or parametric programming. There is, however, a second set of situations which include processes that are not well understood and the available mathematical models are only approximate and discrete. While there are others for which mathematical procedures are so complex and disjoint that they are computationally intractable. These are the situations for which heuristics are quite suitable for automation. We choose to call such automation, knowledge-based automation or heuristic programming.

Computational Intelligence Methods for Super-Resolution in Image Processing Applications Anand Deshpande, Vania V. Estrela, Navid

Razmjoo, 2021-05-28 This book explores the application of deep learning techniques within a particularly difficult computational type of computer vision (CV) problem – super-resolution (SR). The authors present and discuss ways to apply computational intelligence (CI) methods to SR. The volume also explores the possibility of using different kinds of CV techniques to develop and enhance the tools/processes related to SR. The application areas covered include biomedical engineering, healthcare applications, medicine, histology, and material science. The book will be a valuable reference for anyone concerned with multiple multimodal images, especially professionals working in remote sensing, nanotechnology and immunology at research institutes, healthcare facilities, biotechnology institutions, agribusiness services, veterinary facilities, and universities.

New Work, Transformational and Virtual Leadership Marc Helmold, 2021-01-13 The increasing globalization, the battle for talents, and global trends are changing the work patterns in organisations around the globe. Enterprises are working across country and cultural borders alongside complex supply and demand networks. Global incidents such as the financial crisis in 2008 and the recent COVID-19 pandemic have forced global organizations to find innovative ways to continue to connect globally and maintain a competitive advantage. Therefore, innovative enterprises have established global and virtual organisations including members of the value chain on supply and demand side. This book outlines these new work and leadership styles, and agile organisations, which are necessary to work virtually and globally. It provides case studies and experiences from different global organizations in different industries and sectors with a focus on value-adding processes and services.

AS and A Level ICT Through Diagrams Alan Gardner, 2003-01-02 Oxford Revision Guides are highly effective for both individual revision and classroom summary work. The diagrammatic approach makes the key concepts and processes, and the links between them, easier to memorize. Comprehensive coverage Key topics are graphically presented on page spreads, making the books extremely easy to use. Additionally, this book features specification matching grids so that

you can feel confident that your specification is covered. Saves revision time Your students will save valuable revision time by using these notes instead of condensing their own. In fact many students are choosing to buy their own copies so that they can colour code or highlight them as they might do with their own revision notes.
