Multicomputers and Image Processing Kendall Preston,1982-01-01
Multicomputers and Image Processing: Algorithms and Programs is the second of
a set presenting papers from the third meeting held in Madison, Wisconsin on
May 27-30, 1981. The workshop explores the large and powerful multicomputer
arrays and networks, with particular emphasis on the related aspects of
developing algorithms and programs for multicomputer architectures.
Separating 33 papers into chapters, this book reflects the three major
aspects of the problem: user algorithms and programs; higher level languages;
and multicomputer architectures. The first chapters present specific, larger
structure, as well as whole program algorithms and their respective
applications. Other chapters describe the important high-level programming of
Fortran-based language for the massively parallel processors and the set-
theory-based language for expressing the structural image processing and

perceptual operations effected by Cytocomputer and other cellular-array-motivated architectures. The concluding chapters examine several major types of computer architectures that are being developed for large parallel-serial multicomputer systems. This book is of great value to computer programmers and scientists.

  David Busch's Canon EOS R10 Guide to Digital Photography David D. Busch,2023-02-01 David Busch's Canon EOS R10 Guide to Digital Photography is your all-in-one comprehensive resource and reference for the highly-affordable APS-C format Canon EOS R10. Beginners and budding enthusiasts alike will appreciate this 24-megapixel camera's action-friendly 23 frames-per second continuous shooting capabilities.
