Beginning Access 2002 VBA Robert Smith, Dave Sussman, Ian Blackburn, John Colby, Mark Horner, Martin Reid, Paul Turley, Helmut

Watson,2004-08-18 What is this book about? Access 2002 is the core database application within the OfficeXP suite. Using VBA (Visual Basic for Applications), the user can create his or her own programs in what is essentially a subset of the Visual Basic programming language. Using VBA with Access is a tremendously powerful technique, as it allows you to create great user interfaces (like forms or reports) as a front end to actual data storage and manipulation within the database itself. What does this book cover? This book is a revision of the best-selling *Beginning Access2000 VBA*, reworked to provide a rich tutorial to programming Access 2002 with VBA. New material covers the enhanced options in Access 2002 for publishing data to the Web, handling XML, integrating with SQL Server Desktop Engine, and so on. Who is this book for? This book is for the Access user who already has a knowledge of databases and the basic objects of an Access database, and who now wants to learn how to program with VBA. No prior knowledge of programming is required.

Refusals to License Intellectual Property Ian Eagles, Louise Longdin, 2011-12-15 Economic analysis rarely appears on the judicial horizon in intellectual property litigation. In competition cases, by contrast, economists are familiar figures in the courtroom and the language of economics is scattered throughout the judgments of even the highest courts. One might expect, therefore, that refusals to license intellectual property would generate the same fruitful symbiosis between law and economics when those refusals surface in competition proceedings. This however, has not been how the law on this subject has developed in most jurisdictions. Courts and enforcement agencies faced with a unilateral refusal to license have instead tended to retreat into sketchily articulated black letter rules and presumptions which then have to be fenced off from the rest of competition law by economically irrelevant qualifications and distinctions based on private law categorisations of, and rationales for,

individual intellectual property rights. This bypassing of case-by-case analysis in favour of more traditional modes of legal reasoning is not entirely the fault of lawyers. Economists have contributed to this state of affairs by urging judges and regulators to convert empirically undernourished theories about the proper role of intellectual property in a market economy into rules of law and evidentiary presumptions intended to be binding in future cases. How this came about and what it means for the future of effective competition enforcement globally are the twin concerns of this book.
