Arrhythmia Induction in the EP Lab Gabriel Cismaru, 2019-01-04 This book focuses on how to induce clinical arrhythmias in the electrophysiology (EP) laboratory, a procedure that is indispensable for analyzing the underlying mechanisms, and identifying the most effective treatment of the arrhythmia. In the main part of the book, the authors share their own experiences with 13 different medications that can be injected or infused for arrhythmia induction – ranging from isoprenaline and atropine to ephedrine – all of which can be easily found in any cardiology department. Each chapter begins with a description of the drug's chemical structure and mechanism of actions, then illustrates the infusion preparation, dosage and side effects and lastly analyzes its electrophysiological properties and highlights the most important clinical studies on it. For each drug the authors list – in dedicated tables – administration protocols from their own hospital. This book is of interest to postgraduate students, cardiology residents, cardiologists and pediatric cardiologists with special interest in arrhythmias, as well as to trainees, technicians and nurses involved in the EP lab.

The Euro Joseph E Stiglitz, 2017-11-28 The Nobel Prize-winning economist and best-selling author explains why saving Europe may mean abandoning the euro. When Nobel Prize-winning economist Joseph E. Stiglitz posed this question in the original edition of *The Euro*, he lent much-needed clarity to a global debate that continues to this day. The euro was supposed to unify Europe and promote prosperity; in fact, it has done just the opposite. To save the European project, the euro may have to be abandoned. Since 2010, many of the 19 countries of Europe that share the euro currency—the eurozone—have been rocked by debt crises and mired in lasting stagnation, and the divergence between stronger and weaker economies has accelerated. In *The Euro*, Joseph E. Stiglitz explains precisely why the eurozone has performed so poorly, so different from the expectations at its launch: at the core of the failure is the structure of the eurozone itself, the rules by which it is governed. Stiglitz reveals three potential paths forward: drastic structural reforms, not of the individual countries, but of the eurozone; a well-managed dissolution of the euro; or a bold new system dubbed the “flexible euro.” With trenchant analysis—and brand new material on Brexit—*The Euro* is urgent and timely reading.

Foresight for Science, Technology and Innovation Ian Miles, Ozcan Saritas, Alexander Sokolov, 2016-08-29 □Decision-makers at all levels are being confronted with novel complexities and uncertainties and face long-term challenges which require foresight about long-term future prospects, assumptions, and strategies. This book explores how foresight studies can be systematically undertaken and used in this context. It explicates why and how methods like horizon scanning, scenario planning, and roadmapping should be applied when dealing with high levels of uncertainty. The scope of the book moves beyond “narrow” technology foresight, towards addressing systemic interrelations between social, technological, economic, environmental, and political systems. Applications of foresight tools to such fields as energy, cities, health, transportation, education, and sustainability are considered as well as enabling technologies including nano-, bio-, and information technologies and cognitive sciences. The approaches will be illustrated with specific actual cases.

Environmental Remediation Technologies for Metal-Contaminated Soils Hiroshi Hasegawa, Ismail Md. Mofizur Rahman, Mohammad Azizur Rahman, 2015-09-28 This book presents a comprehensive and detailed description of remediation techniques for metal-contaminated soils derived from both natural processes and anthropogenic activities. Using a methodical, step-by-step presentation, the book starts by overviewing the origin of toxicants and the correlated comparative extent of contamination to the environment. The legal provisions as proposed or applied in different countries are then discussed to explain the global regulatory situation regarding soil contamination and the extent of consequent concern. The core part of this publication describes the major techniques for in situ or ex situ treatment of the contaminated soil to meet the regulatory limits. Finally, risk evaluation is incorporated, giving special attention to possible impacts during or after implementation of the remediation strategies. The intrusion of metals in soils mostly occurs from various anthropogenic activities, e.g., agricultural practices, industrial activities, and municipal waste disposal. The volumes of metal-contaminated soil are becoming greater than before and are ever-increasing due to rapid urbanization, intensified industrialization, and/or population booms in certain parts of the world. Hence, the options previously proposed, such as isolation of the contaminated site or movement of the contaminated mass to a secure disposal site after excavation, are becoming unsuitable from the economic point of view, and instead, decontamination alternatives are preferred. This book will help readers such as scientists and regulators to understand the details of the remediation techniques available to deal with the soils contaminated by toxic metals.

Final Report of the Truth and Reconciliation Commission of Canada, Volume One: Summary Truth and Reconciliation Commission of Canada, 2015-07-22 This is the Final Report of Canada's Truth and Reconciliation Commission and its six-year investigation of the residential school system for Aboriginal youth and the legacy of these schools. This report, the summary volume, includes the history of residential schools, the legacy of that school system, and the full text of the Commission's 94 recommendations for action to address that legacy. This report lays bare a part of Canada's history that until recently was little-known to most non-Aboriginal

Canadians. The Commission discusses the logic of the colonization of Canada's territories, and why and how policy and practice developed to end the existence of distinct societies of Aboriginal peoples. Using brief excerpts from the powerful testimony heard from Survivors, this report documents the residential school system which forced children into institutions where they were forbidden to speak their language, required to discard their clothing in favour of institutional wear, given inadequate food, housed in inferior and fire-prone buildings, required to work when they should have been studying, and subjected to emotional, psychological and often physical abuse. In this setting, cruel punishments were all too common, as was sexual abuse. More than 30,000 Survivors have been compensated financially by the Government of Canada for their experiences in residential schools, but the legacy of this experience is ongoing today. This report explains the links to high rates of Aboriginal children being taken from their families, abuse of drugs and alcohol, and high rates of suicide. The report documents the drastic decline in the presence of Aboriginal languages, even as Survivors and others work to maintain their distinctive cultures, traditions, and governance. The report offers 94 calls to action on the part of governments, churches, public institutions and non-Aboriginal Canadians as a path to meaningful reconciliation of Canada today with Aboriginal citizens. Even though the historical experience of residential schools constituted an act of cultural genocide by Canadian government authorities, the United Nation's declaration of the rights of aboriginal peoples and the specific recommendations of the Commission offer a path to move from apology for these events to true reconciliation that can be embraced by all Canadians.

Environmental Epidemiology Roberto Bertollini, Michael D. Lebowitz, David A. Savitz, Rodolfo Saracci, 1995-11-16 Environmental Epidemiology: Exposure and Disease is a unique resource identifying priorities for public health research in selected areas of environmental epidemiology. Drawn from the proceedings of an international workshop on this topic, the book is a compilation of the specialized knowledge and opinions of environmental epidemiology experts. Organized by the Rome division of the World Health Organization (WHO) European Centre for Environment and Health, the goal of the 1993 workshop, Setting Priorities in Environmental Epidemiology, was to establish a consensus among the experts in the selected areas. The chapters in Environmental Epidemiology: Exposure and Disease cover environmental epidemiology from three different viewpoints: environmental exposures, major disease groups related to the environment, and epidemiological methodology. The environmental exposure categories examined for prioritizing are air contaminants, water contaminants, and ionizing and non-ionizing radiation exposure from human-caused disasters. The major disease groups covered are neoplastic diseases, lung cancer, and non-carcinogenic respiratory disease. Methods discussed in the book include small area studies, use of biochemical markers, exposure assessment, and training. To prioritize, the authors utilized a set of criteria based on exposure conditions, health effects, and the feasibility of human studies. Within the complex and rapidly growing field of environmental epidemiology, this compendium of international expertise provides essential guidance for research emphasis and the allocation of financial and technical resources.

Lessons Learned from the Fukushima Nuclear Accident for Improving Safety of U.S. Nuclear Plants National Research Council (U.S.). Committee on Lessons Learned from the Fukushima Nuclear Accident for Improving Safety and Security of U.S. Nuclear Plants, National Research Council, Nuclear and Radiation Studies Board, Division on Earth and Life Studies, 2014-10-29 The March 11, 2011, Great East Japan Earthquake and tsunami sparked a humanitarian disaster in northeastern Japan. They were responsible for more than 15,900 deaths and 2,600 missing persons as well as physical infrastructure damages exceeding \$200 billion. The earthquake and tsunami also initiated a severe nuclear accident at the Fukushima Daiichi Nuclear Power Station. Three of the six reactors at the plant sustained severe core damage and released hydrogen and radioactive materials. Explosion of the released hydrogen damaged three reactor buildings and impeded onsite emergency response efforts. The accident prompted widespread evacuations of local populations, large economic losses, and the eventual shutdown of all nuclear power plants in Japan. Lessons Learned from the Fukushima Nuclear Accident for Improving Safety and Security of U.S. Nuclear Plants is a study of the Fukushima Daiichi accident. This report examines the causes of the crisis, the performance of safety systems at the plant, and the responses of its operators following the earthquake and tsunami. The report then considers the lessons that can be learned and their implications for U.S. safety and storage of spent nuclear fuel and high-level waste, commercial nuclear reactor safety and security regulations, and design improvements. Lessons Learned makes recommendations to improve plant systems, resources, and operator training to enable effective ad hoc responses to severe accidents. This report's recommendations to incorporate modern risk concepts into safety regulations and improve the nuclear safety culture will help the industry prepare for events that could challenge the design of plant structures and lead to a loss of critical safety functions. In providing a broad-scope, high-level examination of the accident, Lessons Learned is meant to complement earlier evaluations by industry and regulators. This in-depth review will be an essential resource for the nuclear power industry, policy makers, and anyone interested in the state of U.S. preparedness and response in the face of crisis situations.
