Crash Course in eBooks Michele McGraw,Gail Mueller Schultz,2016-10-11 Everything you need to know about eBooks is explained in this holistic guide to a new world of reading—from selection and curation of an eBook collection to training and support for staff and patrons. EBooks are a must for today's libraries, making this introduction indispensable for those who have yet to delve into the ever-expanding universe of downloadable material. This crash course is an easy-to-use, hands-on approach that will simplify the decision and implementation processes. It introduces you to eBooks and eReading and covers the many issues surrounding eBooks in circulating libraries including technology, acquisition, and training. You'll learn how to launch a program, what to buy, how to let your public know you've added eBooks to your collection, and how to circulate the materials. The guide will also help you with decisions like vendor selection, how many eBooks to purchase, which delivery platforms to employ, how best to offer access, and licensing agreements. Chapters can be consulted as stand-alone overviews of key areas, or the book can be used as a source of holistic instruction. While it will be especially useful to small or rural circulating libraries, including public libraries, school libraries, and specialty libraries that may have a small staff responsible for all aspects of library service, tips on things like promoting an eBook collection are pertinent to enhancing any collection.

Semantic Digital Libraries Sebastian Ryszard Kruk,Bill McDaniel,2008-10-08 Libraries have always been an inspiration for the standards and technologies developed by semantic web activities. However, except for the Dublin Core specification, semantic web and social networking technologies have not been widely adopted and further developed by major digital library initiatives and projects. Yet semantic technologies offer a new level of flexibility, interoperability, and relationships for digital repositories. Kruk and McDaniel present semantic web-related aspects of current digital library activities, and introduce their functionality; they show examples ranging from general architectural descriptions to detailed usages of specific ontologies, and thus stimulate the awareness of researchers, engineers, and potential users of those technologies. Their presentation is completed by chapters on existing prototype systems such as JeromeDL, BRICKS, and Greenstone, as well as a look into the possible future of semantic digital libraries. This book is aimed at researchers and graduate students in areas like digital libraries, the semantic web, social networks, and information retrieval. This audience will benefit from detailed descriptions of both today's possibilities and also the shortcomings of applying semantic web technologies to large digital repositories of often unstructured data.
