Charles T. Rubin

The Eclipse of Darwinism Peter J. Bowler, 1983 In this pioneering study of the first major challenges to Darwinism, Peter J. Bowler examines the competing theories of evolution, identifies their intellectual origins, and describes the process by which the modern concept of evolution emerged. Describing the variety of influences that drove scientists to challenge Darwin's conclusions, Bowler reevaluates the influence of social forces on the scientific community and explores the broad philosophical, ideological, and social implications of scientific theories.

Evolution and "the Sex Problem" Bert Bender, 2004 A noteworthy investigation of the Darwinian element in American fiction from the realist through the Freudian eras. theories of sexual selection and of the emotions are essential elements in American fiction from the late 1800s through the 1950s, particularly during the Freudian era and the years surrounding the Scopes trial. the Sex Problem, and what resulted was a great diversity of American narratives aligned with either Darwinian or a number of anti-Darwinian theories of evolution. Included are intriguing discussions of works by Frank Norris, Jack London, Stephen Crane, Theodore Dreiser, Gertrude Stein, Willa Cather, Sherwood Anderson, F. Scott Fitzgerald, five writers of the Harlem Renaissance, John Steinbeck, and Ernest Hemingway. Among the ideas explored are Darwin's theory of common descent; the question of man's place in nature; the possibility of evolutionary progress; the issues of heredity and eugenics; the Darwinian basis of Freud's theory of sexual repression; the quandary of male violence and the role of female choice in sexual selection; the power of and the problems of racial and sexual selection; the power of and the problems of racial and sexual difference; and the ecological problems that arose directly from Darwin's theory of evolution. America's major narratives of human life and love and will be appreciated by literary scholars and readers interested in Darwinism and culture.

Eclipse Miracle , 2017-05-15 Did you know that the Sun and the Moon appear the same size in the sky? That's because the Sun is 400 times bigger than the Moon, but also 400 times farther away. It's been called the great coincidence, but is it just coincidence? Watch as they line up to show us the amazing eclipse miracle! An all-ages scientific and spiritual book.

Emerging Technologies for the Evolution and Maintenance of Software Models Rech, Jörg, 2011-12-31 Model-driven software development drastically alters the software development process, which is characterized by a high degree of innovation and productivity. Emerging Technologies for the Evolution and Maintenance of Software Models contains original academic work about current research and research projects related to all aspects affecting the maintenance, evolution, and reengineering (MER), as well as long-term management, of software models. The mission of this book is to present a comprehensive and central overview of new and emerging trends in software model research and to provide concrete results from ongoing developments in the field.

Emergent Evolution David Blitz, 2013-03-09 Emergent evolution combines three separate but related claims, whose background, origin, and development I trace in this work: firstly, that evolution is a universal process of change, one which is productive of qualitative novelties; secondly, that qualitative novelty is the emergence in a system of a property not possessed by any of its parts; and thirdly, that reality can be analyzed into levels, each consisting of systems characterized by significant emergent properties. In part one I consider the background to emergence in the 19th century discussion of the philosophy of evolution among its leading exponents in England - Charles Darwin, Herbert Spencer, T. H. Huxley, Alfred Russel Wallace, and G. J. Romanes. Unlike the scientific aspect of the debate which aimed to determine the factors and causal mechanism of biological evolution, this aspect of the debate centered on more general problems which form what I call the philosophical framework for evolutionary theory. This considers the status of continuity and discontinuity in evolution, the role of qualitative and quantitative factors in change, the relation between the organic and the inorganic, the relation between the natural and the supernatural, the mind-body problem, and the scope of evolution, including its extension to ethics and morals.

Eclipse Leslie Welch, 2014-11-19 Sometimes the glory can be concealed or hidden for a certain length of time. Each generation is supposed to surpass the previous generation. With the promise of restoration, prosperity, and revival the latter should be greater than the former. The promise of the spiritual outpouring and increased knowledge will cause this generation to exceed other generations. Eclipse was inspired by the Word of GOD and is a disclosure of divine truth about various topics. Each reader will find new insights to go beyond the norm and be taken on a journey into new territory. Each believer will walk in a new level of authority. Leslie Black Phoenix Welch is also the author of The Great Awakening series, The Enigma: Mystery of Christ, Evolution: Rise of Christian Nation, Rogue, and Revolution: War and Peace. He is the organizer of the March on Racism & Poverty Washington DC Rally 2012. He has a bachelors degree from Texas Southern University. This author draws from hometown experiences and years of biblical study. He is a native of Mobile, Alabama.

Binary and Multiple Stars as Tracers of Stellar Evolution Zdenek Kopal, Jürgen H. Rahe, 2012-12-06 Proceedings of the 69th Colloquium of the International Astronomical Union held in Bamberg, F.R.G., August 31-September 3, 1981

Eclipse of Man Charles T. Rubin, 2014-09-02 Tomorrow has never looked better. Breakthroughs in fields like genetic engineering and nanotechnology promise to give us unprecedented power to redesign our bodies and our world. Futurists and activists tell us that we are drawing ever closer to a day when we will be as smart as computers, will be able to link our minds telepathically, and will live for centuries—or maybe forever. The perfection of a “post-human” future awaits us. Or so the story goes. In reality, the rush toward a post-human destiny amounts to an ideology of human extinction, an ideology that sees little of value in humanity except the raw material for producing whatever might come next. In *Eclipse of Man*, Charles T. Rubin traces the intellectual origins of the movement to perfect and replace the human race. He shows how today's advocates of radical enhancement are—like their forebears—deeply dissatisfied with given human nature and fixated on grand visions of a future shaped by technological progress. Moreover, Rubin argues that this myopic vision of the future is not confined to charlatans and cheerleaders promoting this or that technology: it also runs through much of modern science and contemporary progressivism. By exploring and criticizing the dreams of post humanity, Rubin defends a more modest vision of the future, one that takes seriously both the limitations and the inherent dignity of our given nature.

Proceedings of COOP 2010 Myriam Lewkowicz, Parina Hassanaly, Markus Rohde, Volker Wulf, 2017-02-20 COOP 2010 is the 9th edition of the International Conference on Designing Cooperative Systems, being the second European conference in the field of Computer Supported Cooperative Work after ECSCW. The conference brings together researchers who contribute to the analysis and design of cooperative systems and their integration in organizational community,

public and other settings, and their implications for policy and decision making. Cooperative systems design requires a deep understanding of collective activities, involving both artifacts and social practices. Contributions are solicited from a wide range of domains contributing to the fields of cooperative systems design and evaluation: CSCW, HCI, Information Systems, Knowledge Engineering, Multi-agents, organizational and management sciences, sociology, psychology, anthropology, ergonomics, linguistics.

The Rough Guide to Evolution Mark Pallen, Rough Guides, 2011-09-01 Have you ever wondered what Charles Darwin would have had on his iPod? Or exactly how Cartman from South Park fits into the Theory of Evolution? The Rough Guide to Evolution delves into all of this and more, from the life and works of the eminent scientist to the impact of evolutionary thinking on modern times. Read about the evolutionary history of life on Earth, the stark evidence for evolution - including feathered dinosaurs - and how Darwin's breakthrough is still denied by creationists, who have repeatedly tried to ban evolution from the classroom. Providing a complete and authoritative overview of one of the most controversial topics of our age, the guide is an accessible one-stop-shop for all things Darwinian, while listing resources for those keen to dig deeper into our murky beginnings. Find out exactly how Charles Darwin and *The Origin of Species* have affected human life in the 150 years since its publication - everything from Darwinian tourism to the evolution of *The Simpsons* - as well as some new angles that make *The Rough Guide to Evolution* a must-have for die-hard Darwin fans. Rediscover Darwin's earth-shattering explanation for the diversity of life with *The Rough Guide to Evolution*.

Giants of Eclipse: The ζ Aurigae Stars and Other Binary Systems Thomas B. Ake, Elizabeth Griffin, 2014-12-30 The zeta Aurigae stars are the rare but illustrious sub-group of binary stars that undergo the dramatic phenomenon of chromospheric eclipse. This book provides detailed descriptions of the ten known systems, illustrates them richly with examples of new spectra, and places them in the context of stellar structure and evolution. Comprised of a large cool giant plus a small hot dwarf, these key eclipsing binaries reveal fascinating changes in their spectra very close to total eclipse, when the hot star shines through differing heights of the chromosphere, or outer atmosphere, of the giant star. The phenomenon provides astrophysics with the means of analyzing the outer atmosphere of a giant star and how that material is shed into space. The physics of these critical events can be explained qualitatively, but it is more challenging to extract hard facts from the observations, and tough to model the chromosphere in any detail. The book offers current thinking on mechanisms for heating a star's chromosphere and on how a star loses mass, and relates this science synergistically to studies of other stars and binaries, and to the increasing relevance of contributions from new techniques in interferometry and asteroseismology. It also includes a detailed discussion of the enigmatic star epsilon Aurigae, which had recently undergone one of its very infrequent and very baffling eclipses. Though not a zeta Aurigae system, epsilon Aurigae is a true Giant among eclipsing stars. The 7 chapters of this book, written by a group of experts, have been carefully edited to form a coherent volume that offers a thorough overview of the subject to both professional and student.

The Evolution Controversy in America George E. Webb, 2021-05-11 A comprehensive intellectual history of America's century-old debate over teaching evolution in public schools. For well over a century, the United States has witnessed a prolonged debate over the teaching of organic evolution in the nation's public schools. The controversy that began with the publication of Darwin's *Origin of the Species* had by the 1920s expanded to include theologians, politicians, and educators. The Scopes trial of 1925 provided the growing antievolution movement with significant publicity and led to a decline in the teaching of evolution. In *The Evolution Crisis in America*, George E. Webb details how efforts to improve science education in the wake of Sputnik resurrected antievolution sentiment and led to the emergence of "creation science" as the most recent expression of that sentiment. Creationists continue to demand "balanced treatment" of theories of creation and evolution in public schools, even though their efforts have been declared unconstitutional in a series of federal court cases. Their battles have been much more successful at the grassroots level, garnering support from local politicians and educators. Webb attributes the success of creationists primarily to the lack of scientific literacy among the American public.

Picturing Evolution and Extinction Fae Brauer, 2015-10-05 With the increasing loss of biological diversity in this Sixth Age of Mass Extinction, it is timely to show that devolutionary paranoia is not new, but rather stretches back to the time of Charles Darwin. It is also an opportune moment to show how human-driven extinction, as designated by the term, Anthropocene, has long been acknowledged. The halcyon days of European industrial progress, colonial expansion and scientific revolution trumpeted from the Great Exhibition of 1851 until the Dresden International Hygiene Exhibition of 1930 were constantly marred by fears of rampant degeneration, depopulation, national decline, environmental devastation and racial extinction. This is demonstrated by the discourses of catastrophism charted in this book that percolated across Europe in response to the theories of Darwin and Jean Baptiste Lamarck, as well as Marcellin Berthelot, Camille Flammarion, Ernst Haeckel, Louis Landouzy, Félix Le Dantec, Cesare Lombroso, Thomas Huxley, Bénédict-Augustin Morel, Louis Pasteur, Élisée Reclus, Rudolf Steiner and Wilhelm Wundt, among others. This book presents pioneering explorations of the interrelationship between these discourses and modern visual cultures and the ways in which the "picturing of evolution and extinction" by artists as diverse as Roger Broders, Albert Besnard, Fernand Cormon, Hélène Dufau, Émile Gallé, František Kupka, Pablo Picasso, Carles Mani y Roig, Sophie Taeuber and Vasilii Vatagin betrayed anxieties subliminally festering over degeneration alongside latent hopes of regeneration. Following Darwin's concept of evolution as Janus-faced, the dialectical interplay of evolution and extinction and degeneration and regeneration is explored in modern visual cultures in Australia, America, Britain, France, Germany, Russia, Spain and Switzerland at significant spatio-temporal junctures between 1860 and 1930. By unravelling the "picturing" of the dread of alcoholism, cholera, dysentery, tuberculosis, typhoid and rabies, alongside phobias of animalism, criminality, hysteria, impotency and ecological disaster, each chapter makes an original contribution to this new field of scholarship. By locating these discourses and visual cultures within the "golden age of Neo-Lamarckism", they also reveal how regeneration was pictured as the Janus-face of degeneration able to facilitate evolution through the inheritance of beneficial characteristics in propitious environments. In striking such an uplifting note amidst the dissonant cacophony of catastrophism, this book reveals why the art and science of Transformism proved so appealing in France as elsewhere, and why visual cultures of regeneration became as dominant in the twentieth century as the picturing of degeneration had been in the nineteenth century. It also illuminates the paradoxical inversion that occurred in the twentieth century when devolution became equivalent to evolution for many Modernists. Hence, whilst this book opens with the picturing of indigenous people in Australia and North America as "doomed races" by the first publication of Darwin's *On The Origin of Species*, it closes with the quest

by 1930 for a regenerative suntan as dark as the skin of those indigenous people.

Epigenetics and Public Policy Shea K. Robison, 2018-04-19 The exciting field of epigenetics offers novel and unanticipated science-based insights into human origins and development. This book presents one of the first detailed examinations of the political implications of epigenetics. Epigenetics—the study of internal and environmental factors that affect how genes are turned on or off and how cells read those genes—is a rapidly emerging science akin to genetics that introduces a number of novel and unexpected biological explanations of human origins and development. It also poses fundamental challenges to many of the assumptions of the prevailing science of genetics. When science changes, how does public policy respond? This book comprehensively considers the political implications of the emerging science of epigenetics in specific policy domains, addressing the intersections of epigenetics with cancer, obesity, the environment, and the law. Author Shea K. Robison carefully navigates the messy history of genetics and epigenetics in order to explore what changes in public policy might come in the age of a new scientific frontier. Readers will understand how new findings in epigenetic research and increased acceptance of epigenetic science may lead to paradigm shifts in cancer prevention and treatment, significantly different policy solutions for combating obesity, and revised statutes of limitations and laws regarding civil and corporate liability and wrongful life.

Physics of Binary Star Evolution Thomas M Tauris, Edward P.J. van den Heuvel, 2023-06-20 A graduate-level textbook on the astrophysics of binary star systems and their evolution Physics of Binary Star Evolution is an up-to-date textbook on the astrophysics and evolution of binary star systems. Theoretical astrophysicists Thomas Tauris and Edward van den Heuvel cover a wide range of phenomena and processes, including mass transfer and ejection, common envelopes, novae and supernovae, X-ray binaries, millisecond radio pulsars, and gravitational wave (GW) sources, and their links to stellar evolution. The authors walk through the observed properties and evolution of different types of binaries, with special emphasis on those containing compact objects (neutron stars, black holes, and white dwarfs). Attention is given to the formation mechanisms of GW sources—merging double neutron stars and black holes as well as ultra-compact GW binaries hosting white dwarfs—and to the progenitors of these sources and how they are observed with radio telescopes, X-ray satellites, and GW detectors (LIGO, Virgo, KAGRA, Einstein Telescope, Cosmic Explorer, and LISA). Supported by illustrations, equations, and exercises, Physics of Binary Star Evolution combines theory and observations to guide readers through the wonders of a field that will play a central role in modern astrophysics for decades to come. 465 equations, 47 tables, and 350+ figures More than 80 exercises (analytical, numerical, and computational) Over 2,500 extensive, up-to-date references

Open Source Systems: Integrating Communities Kevin Crowston, Imed Hammouda, Björn Lundell, Gregorio Robles, Jonas Gamalielsson, Juho Lindman, 2016-05-16 This book constitutes the refereed proceedings of the 12th International IFIP WG 2.13 International Conference on Open Source Systems, OSS 2016, held in Gothenburg, Sweden, in May/June 2016. The 13 revised full papers presented were carefully reviewed and selected from 38 submissions. The papers cover a wide range of topics related to free, libre, and open source software, including: organizational aspects of communities; organizational adoption; participation of women; software maintenance and evolution; open standards and open data; collaboration; hybrid communities; code reviews; and certification.

Understanding Evolution Kostas Kampourakis, 2014-04-03 Current books on evolutionary theory all seem to take for granted the fact that students find evolution easy to understand when actually, from a psychological perspective, it is a rather counterintuitive idea. Evolutionary theory, like all scientific theories, is a means to understanding the natural world. Understanding Evolution is intended for undergraduate students in the life sciences, biology teachers or anyone wanting a basic introduction to evolutionary theory. Covering core concepts and the structure of evolutionary explanations, it clarifies both what evolution is about and why so many people find it difficult to grasp. The book provides an introduction to the major concepts and conceptual obstacles to understanding evolution, including the development of Darwin's theory, and a detailed presentation of the most important evolutionary concepts. Bridging the gap between the concepts and conceptual obstacles, Understanding Evolution presents evolutionary theory with a clarity and vision students will quickly appreciate.

Historicism and the Human Sciences in Victorian Britain Mark Bevir, 2017-03-10 This book studies the rise and nature of historicist approaches to life, race, character, language, political economy, and empire. Arguing that Victorians understood life and society as developing historically in a way that made history central to public culture, it will appeal to those interested in Victorian Britain, historiography, and intellectual history.

Eclipse Evolution Book Review: Unveiling the Magic of Language

In an electronic digital era where connections and knowledge reign supreme, the enchanting power of language has been more apparent than ever. Its power to stir emotions, provoke thought, and instigate transformation is really remarkable. This extraordinary book, aptly titled "**Eclipse Evolution**," compiled by a very acclaimed author, immerses readers in a captivating exploration of the significance of language and its profound impact on our existence. Throughout this critique, we will delve to the book's central themes, evaluate its unique writing style, and assess its overall influence on its readership.
