Learner Choice, Learner Voice Ryan L Schaaf,Becky Zayas,Ian Jukes,2022-06-15 Learner Choice, Learner Voice offers fresh, forward-thinking supports for teachers creating an empowered, student-centered classroom. Learner agency is a major topic in today's schools, but what does it mean in practice, and how do these practices give students skills and opportunities they will need to thrive as citizens, parents, and workers in our ever-shifting climate? Showcasing authentic activities and classrooms, this book is full of diverse instructional experiences that will motivate your students to take an agile, adaptable role in their own learning. This wealth of pedagogical ideas — from specific to open-ended, low-tech to digital, self-expressive to collaborative, creative to critical — will help you discover the transformative effects of providing students with ownership, agency, and choice in their learning journeys.

Building Competences for Spatial Planners Anastassios Perdicoulis,2011-03-22 Spatial planning is a process. The focus of this book is on the sequence of key tasks that constitute the process and on special techniques that are suitable to conduct these tasks. Spatial planners require a number of skills to manage this process in an efficient manner, select the necessary tasks for each specific planning context, as well as the appropriate techniques for each task — always considering the people with whom and for whom they plan. Rather than recommending options, or 'recipes', this book stimulates critical thinking and questioning: What do we want to achieve? How can we do that? What options do we have? Which option is the best for our case? This book contains enough planning theory to discuss the function of the planner and the alternative approaches, as well as to provide the background for defining a core set of planning tasks. Building Competences for Spatial Planners is ideal for both planning students and newly qualified planners who are rapidly accumulating knowledge and experience. Perdicoulis uses practice examples, diagrams and thought provoking chapter questions to help planners develop high-level skills such as efficient organization, communication and thinking. His engaging style carries the reader through areas such as team functions, how to define the planning problem, organizing timings and how to use charts and diagrams to help planners and their clients.   Interactive Collaborative Learning Michael E. Auer,David Guralnick,James Uhomoibhi,2017-01-07 This book presents the proceedings of the 19th International Conference on Interactive Collaborative Learning, held 21-23 September 2016 at Clayton Hotel in Belfast, UK. We are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of developments in both technology and the global markets, and the growing need for flexibility and agility are essential and challenging elements of this process that have to be addressed in general, but especially in the context of engineering education. To face these topical and very real challenges, higher education is called upon to find innovative responses. Since being founded in 1998, this conference has consistently been devoted to finding new approaches to learning, with a focus on collaborative learning. Today the ICL conferences have established themselves as a vital forum for the exchange of information on key trends and findings, and of practical lessons learned while developing and testing elements of new technologies and pedagogies in learning.

  Techniques and Sample Outputs that Drive Business Excellence H. James Harrington,Chuck Mignosa,2015-01-06 Many organizations are looking for that magic tool or methodology that will suddenly transform them into outstanding organizations. Unfortunately, there is no one right answer for all organizations or even for a single organization. Successful organizations skillfully integrate the appropriate improvement approaches with honesty, commitment, and constancy of purpose across all levels of management. This book, part of The Little Big Book series, discusses the most common set of tools and methodologies used in managerial, strategic planning, project selection, and organizational improvement projects that are referred to throughout The Little Big Book series. It presents, in a concise no-nonsense format, the concepts and techniques that must be mastered by project managers and anyone tasked with managing an improvement project. The tools covered in this book include affinity diagrams, brainstorming, cause-and-effect diagrams, the Kano model, organizational process improvement, Pareto analysis, project management, risk management, root cause analysis, storyboarding, value propositions, and workflow diagrams. Because of the large number of tools and techniques covered, the book supplies concise operating guidance for each tool that is adequate to prepare readers to understand and use that tool. It also includes examples of how the tools are used. The book provides a basic understanding of the tools you need to

improve the processes you are currently using to manage your organization and, ultimately, to improve the quality, productivity, and agility of the products or services you are delivering to your customers. The tools presented in this book are the essential tools that all organizations should be using. By understanding and using the tools covered in this book, you will possess a better overall understanding of the way your organization needs to function in today's increasingly competitive environment. This book is designed to supplement and provide additional direction in the use of the methodologies defined in the other books in The Little Big Book series
