Learning Progressions in Geography Education Osvaldo Muñiz Solari, Michael Solem, Richard Boehm, 2016-07-30 This book informs an international audience of teachers, scholars and policymakers about the development of learning progressions for primary and secondary geography education in various countries and regions of the world. The book represents an important contribution to learning progressions research and practice. The different chapters explore how curriculum standards and frameworks in different countries portray progress and sophistication in the learning of geography. The book compares educational systems and how teachers and curriculum developers use the concept of “learning progression” to guide educational practices. As an approach to educational research, learning progressions offer considerable potential for understanding how children develop understanding of geographic concepts and practices across grade bands and in relation to national geography standards. The book analyzes the general conditions of learning progressions within the context of a globalized world. Important themes are addressed such as: knowledge acquisition in formal education; measuring learning progressions in informal settings; learning progressions for one curriculum standard or several standards; conditions to assess progression in the learning of facts, concepts, and skills; and multiple pathways for understanding or learning geography. The contributing authors are experienced scientists in the field from all around the world giving specific insights into the practices of their countries. The book appeals to K-12 teachers, school administrators, policymakers, researchers in geography education, professors and lecturers at universities around the world.

The comprehensive, rigorous coverage of these key issues, together with carefully annotated selected further reading, reflective questions and a range of specific web-based resources, will help support shape your own research and writing. *Debates in Geography Education* is a source of knowledge, experience and debate that will be essential reading for all students studying at Masters level, practising teachers who want to develop a better understanding of the issues that shape their practice, and Education Studies students considering in-depth subject teaching.

It is ideal for anyone beginning a career in teaching the subject in schools. The chapters are written by experienced teachers.

Geography in Secondary Schools Nick Hopwood, 2012-06-21 Gaining a better sense of how pupils conceive school geography is crucial if we are to understand the ways in which their ideas and values mediate learning processes. *Geography in Secondary Schools* explores how pupils experience geography lessons, what they think geography as a school subject is about, and what it means to them. School geography aims to help young people think about the world and their place in it in a distinctive - geographical - way. However very little is known about the kinds of thinking and values they associate with the subject. Researchers are increasingly taking young people's ideas seriously as important and worthy of investigation in their own right. In this book, Nick Hopwood takes such an approach to explore the relationships between pupils and geography as a school subject. He follows six pupils through their geography lessons for a period of three months, discussing their learning experiences in depth with them. Their participation in class, written work, and comments made in interviews form the basis for a detailed investigation of their ideas.

Handbook for Teaching and Learning in Geography Helen Walkington, Jennifer Hill, Sarah Dyer, 2019-12-27 This exemplary Handbook provides readers with a novel synthesis of international research, evidence-based practice and personal reflections to offer an overview of the current state of knowledge in the field of teaching geography in higher education. Chapters cover the three key transitions - into, through, and out of higher education - to present a thorough analysis of the topic.

Citizenship Through Secondary Geography David Lambert, Paul Machon, 2004-01-14 This book reveals the potential of geography to engage with citizenship. It provides: theoretical signposts in the form of short, digestible explanations for key ideas such as racism, values, identity, community and social exclusion a number of inset activities 'for further thinking' a critique of the discipline and the pitfalls to avoid in teaching citizenship through geography practical teaching suggestions. All the contributions to this valuable book point to the capacity of geography to engage with citizenship, values, education and people - environment decision-making, on scales that range from the local to the global. It offers positive and direct ways to become involved in the thinking that must underpin any worthwhile citizenship education, for all experienced teachers, student teachers, heads of department, curriculum managers, principals and policy-makers.

Geography 11 - 16 (1995) Bill Marsden, 2018-09-03 Published in 1995, this book seeks to show how geography teachers can meet the requirements of the National Curriculum at Key Stages 3 and 4 without abandoning principles of good practice. It considers geographical education in the contexts of geography itself, society and education. Deriving principles of good practice from these contexts, the author gives guidance on how to produce case studies (or curriculum units) that both reflect these principles and respond to the requirements of the National Curriculum following the Dearing Revised Order.

Teaching Human Geography Erin Hogan Fouberg, Janet Stuhrenberg Smith, 2023-03-02 This timely book examines advances in teaching and learning at undergraduate level from the disciplines of geography education, neuroscience and learning science. Connecting these disciplines, the chapters integrate research on how students learn and explain how to teach students to think geographically and develop a deeper understanding of their world.

Geography Education in the Digital World Nicola Walshe, Grace Healy, 2020-10-07 Geography Education in the Digital World draws on theory and practice to provide a critical exploration of the role and practice of geography education within the digital world. It considers how living within a digital world influences teacher identity and professionalism and is changing young people's lives. The book moves beyond the applied perspective of educational technology to engage with wider social and ethical issues of technology implementation and use of digital data within geography education. Situated at the intersection between research and practice, chapters draw on a wide range of theory to consider the role, adoption and potential challenges of a range of digital technologies in furthering geographical education for future generations. Bringing together academics from the fields of geography, geography education and teacher education, the book engages with four key themes within the digital world: Professional practice and personal identities. Geographical sources and connections. Geospatial technologies. Geographical fieldwork. This is a crucial read for geographers, geography educators and geography teacher educators, as well as those engaging with existing and new technologies to support geographical learning in the dynamic context of the digital world. It will also be of interest to any students, academics and policymakers wanting to better understand the impact of digital media on education.

Research and Debate in Primary Geography Simon Catling, 2017-10-02 This book brings together recent papers which make important contributions to understanding and developing primary geography. It considers primary teachers' and trainee teachers' knowledge of geography;

how the primary curriculum uses geography; teachers' planning of geography teaching; the way in which aspects of geography are taught; what high quality geography might look like; and children's geographical understanding and voices. Though geography curricula change quite often in countries around the world, the core matters noted above remain of constant and vital importance. The papers in this book either concern research with primary teachers and children, or consider key concerns in primary geography, providing important perspectives for thinking about future developments in geography teaching and curriculum initiatives in primary schools. This is a stimulating and enticing collection written by leading exponents of, and experts in, primary geography education. This book was originally published as a special issue of *Education 3-13*.
