Fiscal Accountability and Population Aging Robert L. Clark, YoungWook Lee, Andrew Mason, 2021-04-30 Focusing on the developing economic challenges confronting Korea and the US in response to the aging of their populations, this timely book examines how public policies are evolving in light of demographic changes, the impact of aging on governmental expenditures, and transitions in the labor force associated with aging.

Interventions for inclusive and efficient value chains: Insights from CGIAR research de Brauw, Alan, Bulte, Erwin, 2021-12-31 Efforts to promote the development of agricultural value chains are a common element of strategies to stimulate economic growth in low-income countries. Since the world food price crisis in 2007-2008, developing country governments, international donor agencies, and development practitioners have placed additional emphasis on making agricultural value chains work better for the poor. As value chains evolve to serve new markets, they tend to become less inclusive. For example, if a market for high quality rice arises within an economy, it is inherently easier for traders who sell rice to retailers to source that high quality rice from larger farms that are better able to control its quality than from dozens of smallholder farms. As a result, the normal path of value chain evolution can be biased against smallholders; hence, it is important to understand what types of interventions can make value chains more inclusive while also making them more efficient. In this brief, we summarize studies on five types of value chain interventions that were supported by the CGIAR's Research Program on Policies, Institutions, and Markets (PIM) through its Flagship 3 on Inclusive and Effective Value Chains. Figure 1 illustrates a "typical" agricultural value chain, including the five intervention types (in orange). These include interventions that attempt to deal with multiple production constraints; certification; contract farming; public-private partnerships; and "other" services related to trading and marketing agricultural products. Apart from the last category, these interventions all involve production. This reflects the fact that smallholder producers can be considered, in some ways, the weakest link in evolving agricultural value chains (de Brauw and Bulte 2021). Hence, it is sensible to target interventions either at or close to smallholders. However, in some cases, the best way to overcome smallholder constraints may be to help actors at other points in the value chain overcome constraints. Many interventions share a focus on reducing transaction costs to promote smallholder market integration. Ideally, interventions increase both efficiency and inclusion, but we observe that such win-win outcomes are rare. Trade-offs appear to be more common than synergies, and some value chain interventions involve clear winners and losers.

Improving Public Investment Efficiency in the G-20 International Monetary Fund. Fiscal Affairs Dept., 2015-01-09 Through the provision of both social and economic infrastructure, public investment can serve as an important catalyst for economic growth. A significant body of theoretical and empirical research underscores the positive relationship between investment in high-quality public infrastructure and economy-wide productivity.¹ Against the background of a steady decline in public investment as a share of GDP in advanced economies, evidence of infrastructure bottlenecks in emerging economies, and the sluggish global economic recovery, the G-20 has called for ramping up public investment to raise long-run economic growth (G-20,

2014).² However, the economic and social impact of public investment crucially depends on its efficiency. Despite anecdotal evidence of projects plagued by time delays, cost overruns, and inadequate maintenance, there are few robust empirical studies of the determinants of public investment efficiency. This paper explores the link between public investment management (PIM) institutions and the efficiency of public investment for the G-20 countries. Based on the analysis from a recent IMF study, the paper finds that better PIM enhances public infrastructure quality, and pinpoints key institutional reforms needs to boost public investment efficiency (IMF 2015). These findings and recommendations are based on a comprehensive data set on investment, infrastructure and capital stocks, and two analytical innovations: (i) a new cross-country Public Investment Efficiency Index (PIE-X); and (ii) a new Public Investment Management Assessment (PIMA) which is applied to G-20 countries.

From Mines and Wells to Well-Built Minds Bénédicte de la Brière, Deon Filmer, Dena Ringold, Dominic Rohner, Anastasiya Denisova, 2017-05-17 Sub-Saharan Africa's natural resource-rich countries have poor human development. Children in these countries are more likely to die before their first birthday, more likely to be stunted, and less likely to attend school than children in other countries with similar income. Despite the current price downturn, extractives will remain an important part of Sub-Saharan Africa's growth story—using resource rents wisely remains a long term challenge. Governments must choose how to allocate resource rents between spending, investing in human or physical capital, or investing in global financial assets. The return to investing in physical and human capital will be high in countries where the capital stock is low. Moreover, higher levels of human capital make investments in physical capital more productive, which suggests that the optimal portfolio will involve investing in both. Human capital should be prioritized in many of Sub-Saharan Africa's resource-rich countries because of the low starting point. Investing effectively in human capital is hard because it involves delivering services, which means coordinating a large number of actors and activities. Three dimensions of governance are key: institutions, incentives and information. Decentralization and leveraging the private sector are entry points to reforming institutional structures. Revenues from natural resources can fund financial incentives to strengthen performance or demand. Producing information, making it available, and increasing social accountability helps citizens understand their rights and hold governments and providers accountable. Improving the quality of education and health services is central to improving human capital. Two additional areas are promising. First, early child development—mother and newborn health, and early child nutrition, care, and education—improves outcomes in childhood and later on. Second, cash transfers—either conditional or unconditional—reduce poverty, increase household investments in child education, nutrition, and health, and increase the investment in productive assets which foster further income generation.

Cooperative Environments for Distributed Systems Engineering Khalil Drira, Andrea Martelli, Thierry Villemur, 2003-06-30 The engineering life cycle for complex systems design and development, where partners are dispersed in different locations, requires the set-up of adequate and controlled processes involving many different disciplines. The “design integration” and the final “system physical/functional integration and qualification” imply a high degree of cross-interaction among the partners. The - place technical information systems supporting the life cycle activities are specialized with respect to the needs of each actor in the process chain and are highly heterogeneous between them. To globally innovate in-place processes, specialists must be able to work as a unique team, in a virtual enterprise model. To this aim, it is necessary to make interoperable the different technical information systems and to define co-operative engineering processes, which take into account “distributed roles”, “shared activities”, and “distributed process controls”. In this frame an innovative study, aimed at addressing this process with the goal of identifying proper solutions - in terms of design, implementation, and deployment - has been carried out with the support of the European Community and the participation of major industrial companies and research centers.

Smoothed Point Interpolation Methods G R Liu, G Y Zhang, 2013-08-16 Based on the widely used finite element method (FEM) and the latest

Meshfree methods, a next generation of numerical method called Smoothed Point Interpolation Method (S-PIM) has been recently developed. The S-PIM is an innovative and effective combination of the FEM and the meshfree methods, and enables automation in computation, modeling and simulations — one of the most important features of the next generation methods. This important book describes the various S-PIM models in a systematic, concise and easy-to-understand manner. The underlying principles for the next generation of computational methods, G space theory, novel weakened weak (W2) formulations, techniques for shape functions, formulation procedures, and implementation strategies are presented in detail. Numerous examples are provided to demonstrate the efficiency and accuracy of the S-PIM solutions in comparison with the FEM and other existing methods. Effective techniques to compute solution bounds employing both S-PIM and FEM are highlighted to obtain certified solutions with both upper and lower bounds. The book also presents a systematically way to conduct adaptive analysis for solutions of desired accuracy using these bound properties, which is another key feature of the next generation of computational methods. This will benefit researchers, engineers and students who are venturing into new areas of research and computer code development. Middleware Solutions for Wireless Internet of Things Paolo Bellavista, Carlo Giannelli, Sajal K. Das, Jiannong Cao, 2019-07-15 The proliferation of powerful but cheap devices, together with the availability of a plethora of wireless technologies, has pushed for the spread of the Wireless Internet of Things (WIoT), which is typically much more heterogeneous, dynamic, and general-purpose if compared with the traditional IoT. The WIoT is characterized by the dynamic interaction of traditional infrastructure-side devices, e.g., sensors and actuators, provided by municipalities in Smart City infrastructures, and other portable and more opportunistic ones, such as mobile smartphones, opportunistically integrated to dynamically extend and enhance the WIoT environment. A key enabler of this vision is the advancement of software and middleware technologies in various mobile-related sectors, ranging from the effective synergic management of wireless communications to mobility/adaptivity support in operating systems and differentiated integration and management of devices with heterogeneous capabilities in middleware, from horizontal support to crowdsourcing in

different application domains to dynamic offloading to cloud resources, only to mention a few. The book presents state-of-the-art contributions in the articulated WIoT area by providing novel insights about the development and adoption of middleware solutions to enable the WIoT vision in a wide spectrum of heterogeneous scenarios, ranging from industrial environments to educational devices. The presented solutions provide readers with differentiated point of views, by demonstrating how the WIoT vision can be applied to several aspects of our daily life in a pervasive manner.

Public Investment Management Reference Guide Jay-Hyung Kim, Jonas Arp Fallov, Simon Groom, 2020-03-03 The Public Investment Management (PIM) Reference Guide aims to convey country experiences and good international practices as a basis for decisions on how to address a country-specific PIM reform agenda. The country references are drawn largely from previous diagnostics and technical assistance reports of the World Bank. The application of country diagnostics and assessments has revealed a need to address the following issues when undertaking a country reform in PIM:

- Clarification of the definition and scope of public investment and public investment management
- Establishment of a sound legal, regulatory, and institutional setting for PIM, making sure it is linked to the budget process
- Allocation of roles and responsibilities for key players in PIM across government
- Strengthening of guidance on project preappraisal, appraisal, and selection-prioritization procedures and deepening of project appraisal methodologies
- Integration of strategic planning, project appraisal-selection, and capital budgeting
- Management of multiyear capital budget allocations and commitments
- Efforts to address effective implementation, procurement, and monitoring of projects
- Strengthening of asset management and ex post evaluation
- Integration of PIM and public-private partnership (PPP) in a unified framework
- Rationalization and prioritization of the existing PIM project portfolio
- Development of a PIM database and information technology in the form of a PIM information system.

The PIM Reference Guide does not seek to provide definitive answers or standard guidance for the common PIM issues facing countries. Nor does it seek to provide a detailed template for replication across countries: this would be impossible given the diversity of country situations. Instead, each chapter begins with an overview of the specific reform issue, lists approaches and experiences from different countries, and summarizes the references and good practices to be considered in designing country-specific reform actions.

Membrane Technologies for Water Treatment Alberto Figoli, Jan Hoinkis, Jochen Bundschuh, 2016-02-18 Focuses on the application of membrane technologies in removing toxic metals\metalloids from water. Particular attention is devoted to the removal of arsenic, uranium, and fluoride. These compounds are all existing in the earth's crust at levels between two and five thousands micrograms per kg (parts per million) on average and these compounds can be considered highly toxic to humans, who are exposed to them primarily from air, food and water. In order to comply with the new maximum contaminant level, numerous studies have been undertaken to improve established treatments or to develop novel treatment technologies for removing toxic metals from contaminated surface and groundwater. Among the technologies available, applicable for water treatment, membrane technology has been identified as a promising technology to remove such toxic metals from water. The book describes both pressure driven (traditional processes, such as Nanofiltration, Reverse Osmosis, Ultrafiltration, etc) and more advanced membrane processes (such as forward osmosis, membrane distillation, and membrane bio-reactors) employed in the application of interest. Key aspect of this book is to provide information on both the basics of membrane technologies and on the results depending on the type of technology employed.

Republic of Iraq Public Expenditure Review The World Bank, 2014-08-22 This Public Expenditure Review (PER) provides an integrated perspective on Iraq's need to provide better public service delivery, while maintaining macroeconomic stability and fiscal discipline. The achievement of these objectives unfolds within a challenging context of revenue volatility, the need to diversify the economy, weak accountability mechanisms, and residual conflict. Reflecting these challenges, key socio-economic developmental indicators are stalled or even declining despite rapid growth in public spending. Indeed, the review shows that growth in spending has not been matched by absorptive capacity, let alone improved outcomes. The difficult

task of constructing the fiscal institutions to embed the practices of good economic management remains a work-in-progress. The PER is one component of World Bank assistance to the government to improve public expenditure policy and management. The challenge for the Iraqi authorities in the years ahead will be to turn oil revenues into sustained welfare improvements. Macroeconomic stability alone is not enough to address social and economic development issues and to avoid a resource curse. Iraq's oil wealth alone cannot generate sustainably high living standards for the majority of its population. Economic diversification is an imperative—both to create jobs and to promote income-generating opportunities for the Iraqi population. The key challenges for the authorities therefore are (i) to remove constraints to non-hydrocarbon economic activities; (ii) to ensure the efficient use of oil revenue; and (iii) to restrain the growth of current spending (in particular wage bill and subsidies) to free up resources for public investment, while maintaining essential safety nets and social support for the poor and disadvantaged. Public investment management is a crosscutting capability that is needed to meet Iraq's development objectives. The government has the opportunity to take concrete steps now. The PER proposes approaches and actions to better use Iraq's oil revenues by shifting to a save and invest via curbing inefficient spending and redirecting resources to public investment and basic services. As economic growth prospects are favorable in the medium-term, the Iraqi government has the opportunity to lay the foundations of a broadly diversified economy, with a reasonable footprint that provides decent public services and security while facilitating adequate economic freedom. Senior policy makers at the Ministry of Finance, Ministry of Planning and line ministries are the primary audience of this work.
