Vaccines for Older Adults Birgit Weinberger,2020 Many infectious diseases are more frequent and are associated with high morbidity and mortality in older adults. Vaccination is the most efficient strategy to prevent infections, and older adults are an important target population for vaccination in order to promote health in this age group. Age-related changes in the immune system as well as other factors, such as comorbidities, obesity or frailty, influence vaccine-induced immune responses in old age. Awareness that vaccines developed for children might not be optimal for adults, and particularly for the older population, has only arisen in the recent past. Vaccination against influenza, pneumococcal disease, and herpes zoster is specifically recommended for older adults in many countries, and various strategies have been pursued in order to optimize these vaccines. However, there are still many pathogens, which severely affect the older population, but for which no vaccines are currently available. Extensive research and development are ongoing to further improve existing vaccines and to design novel vaccines in order to provide protection for this vulnerable age group. In order to exploit the full protective potential of vaccines it is essential to improve vaccine uptake and overcome vaccine hesitancy by providing information and education to stakeholders, health care professionals, and the general public. This book is relevant for researchers working on age-related changes in the immune system or on vaccine development, for health care professionals treating older patients, and for the stakeholders and decision makers involved in vaccination recommendations and implementation.

Microbes and the Mind C.S.M. Cowan,B.E. Leonard,2021-05-06 Interest in the mind-body connection has grown in recent years, with accumulating evidence showing that the gut microbiome can alter behavioral, neural, and psychological outcomes. This publication brings together a group of international experts who are investigating the microbiome and its potential to contribute to the causes and treatment of mental illness. The contributions are not aimed solely at specialists in clinical and experimental neuroscience. They cover a range of key topics, including the role of the microbiome in mental health and specific psychiatric disorders that occur across the lifespan, interactions with the immune system, diet, and pharmacological interventions. Furthermore, the microbial metabolite production and the potential for psychobiotic interventions that target the microbiome to improve mental health outcomes are discussed. This book is unique in its focus on the mechanisms and consequences of the activities of gut microorganisms in mental health and illness, providing expert insight into the current state of the art and important future directions for this emerging area of research. Additionally, it provides an excellent knowledge base for newcomers and a refresher for researchers and clinicians working in the fields of neuroscience, psychology, or psychiatry.

Practical UML Statecharts in C/C++ Miro Samek,2008-10-03 Practical UML Statecharts in C/C++ Second Edition bridges the gap between high-level abstract concepts of the Unified Modeling Language (UML) and the actual programming aspects of modern hierarchical state machines (UML statecharts). The book describes a lightweight, open source, event-driven infrastructure, called QP that enables direct manual coding UML statecharts and concurrent event-driven applications in C or C++ without big tools. This book is presented in two parts. In Part I, you get a practical description of the relevant state machine concepts starting from traditional finite state automata to modern UML state machines followed by state machine coding techniques and state-machine design patterns, all illustrated with executable examples. In Part II, you find a detailed design study of a generic real-time framework indispensable for combining concurrent, event-driven state machines into robust applications. Part II begins with a clear explanation of the key event-driven programming concepts such as inversion of control (Hollywood Principle), blocking versus non-blocking code, run-to-completion (RTC) execution semantics, the importance of event queues, dealing with time, and the role of state machines to maintain the context from one event to the next. This background is designed to help software developers in making the transition from the traditional sequential to the modern event-driven programming, which can be one of the trickiest paradigm shifts. The lightweight QP event-driven infrastructure goes several steps beyond the traditional real-time operating system (RTOS). In the simplest configuration, QP runs on bare-metal microprocessor, microcontroller, or DSP completely replacing the RTOS. QP can also work with almost any OS/RTOS to take advantage of the existing device drivers, communication stacks, and other middleware. The accompanying website to this book contains complete open source code for QP, ports to popular processors and operating systems, including 80x86, ARM Cortex-M3, MSP430, and Linux, as well as all examples described in the book.

Radicalization, Terrorism, and Conflict Rachel Monaghan,Tali Walters,2013-07-26 Radicalization, Terrorism, and Conflict is a collection of scholarly works, authored by international researchers and leading thinkers, addressing contemporary, history-making issues in international security and terrorism from an interdisciplinary perspective. Contributors to this edited volume represent global perspectives, ideas, analysis, and research. Radicalization, Terrorism, and Conflict transmits relevant findings, theory, and policy ideas for scholars of security and terrorism studies, for policy makers, and to the general public who are interested in keeping up with this global area of concern. It provides a jumping-off point for conversation and collaboration that can lead to new knowledge and broader understanding. As an interdisciplinary collection of manuscripts, this book integrates and synthesizes theory, research, and public policy analysis in an effort to solve the complex questions and problems presented by this topic. Recognition of the need to approach the problems of radicalization, terrorism, and interpersonal conflict from an interdisciplinary perspective is gaining strength within academic settings, policy institutes, and global conferences. Unlike most recent edited books on the subject that are on the market at this time, Radicalization, Terrorism, and Conflict provides an interdisciplinary approach to understanding related current issues. This approach encourages a broader perspective and thought process, trans-discipline and global collaboration and cooperation, and an integrated synthesis of knowledge. Radicalization, Terrorism, and Conflict opens with an analysis of the ongoing phenomenon of the Arab Spring. In Section 1, contributors look at how players in the theatres of local and international terror become radicalized. Section 2 analyzes how terrorism becomes manifest in the global theatre and how governments and their actors attempt to prevent it. Section 3 presents research to bring understanding to the actors' behavior and provide settings for future collaboration in understanding these phenomena.

Post Memes Daniel Bristow,Alfie Bown,2019 Art-form, send-up, farce, ironic disarticulation, pastiche, propaganda, trololololol, mode of critique, mode of production, means of politicisation, even of subjectivation - memes are the inner currency of the internet's circulatory system. Independent of any one set value, memes are famously the mode of conveyance for the alt-right, the irony left, and the apoliticals alike, and they are impervious to many economic valuations: the

attempts made in co-opting their discourse in advertising and big business have made little headway, and have usually been derailed by retaliative meming. POST MEMES: SEIZING THE MEMES OF PRODUCTION takes advantage of the meme's subversive adaptability and ripeness for a focused, in-depth study. Pulling together the interrogative forces of a raft of thinkers at the forefront of tech theory and media dissection, this collection of essays paves a way to articulating the semiotic fabric of the early 21st century's most prevalent means of content posting, and aims at the very seizing of the memes of production for the imagining and creation of new political horizons. With contributions from Scott and McKenzie Wark, Patricia Reed, Jay Owens, Thomas Hobson and Kaajal Modi, Dominic Pettman, Bogna M. Konior, and Eric Wilson, among others, this essay volume offers the freshest approaches available in the field of memes studies and inaugurates a new kind of writing about the newest manifestations of the written online. The book aims to become the go-to resource for all students and scholars of memes, and will be of the utmost interest to anyone interested in the internet's most viral phenomenon.
