Multiphysics Modelling and Simulation for Systems Design and Monitoring Mohamed Haddar,Mohamed Slim Abbes,Jean-Yves Choley,Taoufik Boukharouba,Tamer Elnady,Andrei Kanaev,Mounir Ben Amar,Fakher Chaari,2015-01-03 This book reports on the state of the art in the field of multiphysics systems. It consists of accurately reviewed contributions to the MMSSD'2014 conference, which was held from December 17 to 19, 2004 in Hammamet, Tunisia. The different chapters, covering new theories, methods and a number of case studies, provide readers with an up-to-date picture of multiphysics modeling and simulation. They highlight the role played by high-performance computing and newly available

software in promoting the study of multiphysics coupling effects, and show how these technologies can be practically implemented to bring about significant improvements in the field of design, control and monitoring of machines. In addition to providing a detailed description of the methods and their applications, the book also identifies new research issues, challenges and opportunities, thus providing researchers and practitioners with both technical information to support their daily work and a new source of inspiration for their future research.

Education and Skills for Inclusive Growth, Green Jobs and the Greening of Economies in Asia Rupert Maclean, Shanti Jagannathan, Brajesh Panth, 2017-11-19 This book presents an overview of the main research findings and case studies concerning education and skills for inclusive growth, green jobs and the greening of economies. Focusing on India, Indonesia, Sri Lanka and Viet Nam, it discusses government and business sector responses to these issues and how Technical and Vocational Education and Training (TVET) systems and institutions are addressing both the renewal of curricula in the context of green growth dynamics, and patterns of training and skills development to meet demands. In addition, the book examines cross-country issues, concerns and prospects regarding education and skills for inclusive growth and green jobs for the four countries. These include critical themes and issues in the selected industry sectors triggering a demand for green jobs in

the region; how industry is responding to those demands; areas impeding the transition from traditional to green practices; the importance of skills development; the role of TVET in addressing industry needs; and reasons for the slow response of TVET to green skills. While other studies conducted in Asia - and internationally - on the same topic have largely relied on secondary sources, this study conducted by the Asian Development Bank and the Education University of Hong Kong (ADB-EdUHK) is unique in that the findings, conclusions and recommendations reported on are based on primary data. As part of the study, TVET providers, business enterprises, policy makers and practitioners were surveyed using questionnaires and face-to-face interviews. In addition, workshops were held in each of the four countries to ascertain the views of key stakeholders in government, nongovernment organisations, members of the international development community, TVET providers and members of the business sector. The book also provides summaries of the case studies undertaken for India, Indonesia, Sri Lanka and Viet Nam.

From the Manpower Revolution to the Activation

Paradigm J. Timo Weishaupt, 2011 This illuminating book examines the origins and evolution of labor market policy in Western Europe in three phases: a manpower revolution during the 1960s and 1970s; a phase of international disagreement about the causes of and remedies for unemployment, which triggered a variety of policy responses in the late 1970s and 1980s; and, finally, the emergence of an activation paradigm in the late 1990s, the influence of which continues to reverberate today. J. Timo Weishaupt contends that the evolution of labor market policy is determined not only by historical trajectories or coalitional struggles, but also by policy makers' changing normative and cognitive beliefs. Including case studies of Austria, Denmark, Germany, Ireland, Sweden, and the United Kingdom, this study will be of value to anyone interested in labor market

policy and its governance.

Cutaneous Drug Eruptions John C. Hall, Brian J.

Hall, 2015-08-21 The burden of cutaneous drug reactions is significant, in both outpatient and inpatient settings, and can result in morbidity and even mortality. This book is unique in its approach to this problem. This text is divided into basic principles, common drug reactions, skin conditions mimicked by drug reactions, drug reactions to the skin appendages, life-threatening drug reactions, less common drug reactions, and special groupings of drug reactions. For the clinician, the skin can only morphologically react in to many limited ways. This is also true for the pathologist. Combining these two forever linked specialties is a synergistic paradigm that greatly enhances diagnosis, and ultimately therapy, for these pernicious conditions. Drug reactions in the skin remain a common complication of therapy. True incidences of drug reactions are not available. For general discussion, the rule of 3% can be applied with reasonable assuredness. Approximately 3% of all hospitalized patients develop an adverse cutaneous drug reaction. Approximately 3% of these reactions are considered severe. Outpatient data is even more obscure, but at least 3% of dermatology clinic outpatient visits are due to a drug reaction. Cutaneous drug reactions compromise approximately 3% of all drug reactions. Even more challenging is the fact that the most vulnerable populations to drug reactions are increasing and include the elderly patients on prolonged drug therapy, and patients that use multiple drugs at the same time.

Greening Our Built World Greg Kats,2013-03-05 “Green” buildings—buildings that use fewer resources to build and to sustain—are commonly thought to be too expensive to attract builders and buyers. But are they? The answer to this question has enormous consequences, since residential and commercial buildings together account for nearly 50% of American energy consumption—including at least 75% of electricity usage—according to recent government statistics. This eye-

opening book reports the results of a large-scale study based on extensive financial and technical analyses of more than 150 green buildings in the U.S. and ten other countries. It provides detailed findings on the costs and financial benefits of building green. According to the study, green buildings cost roughly 2% more to build than conventional buildings—far less than previously assumed—and provide a wide range of financial, health and social benefits. In addition, green buildings reduce energy use by an average of 33%, resulting in significant cost savings. Greening Our Built World also evaluates the cost effectiveness of “green community development” and presents the results of the first-ever survey of green buildings constructed by faith-based organizations. Throughout the book, leading practitioners in green design—including architects, developers, and property owners—share their own experiences in building green. A compelling combination of rock-solid facts and specific examples, this book proves that green design is both cost-effective and earth-friendly.

Radiological Imaging of the Neonatal Chest V.

Donoghue, 2013-06-29 As outlined by Dr. V. Donoghue in her preface, recent advances in the therapeutic management of neonates with low gestational age have resulted in a significantly higher survival rate and better outcome for these newborns. Lung and heart malformations or acquired diseases represent a major part of the life threatening conditions in this group of critically ill patients, and radiological imaging is one of the main tools to define the appropriate therapeutic approach. This book not only provides an excellent update on the embryological and anatomical aspects of neonatal chest conditions but also offers a unique and comprehensive overview of our current knowledge and of recent progress in imaging techniques of the neonatal chest. Dr. Donoghue has been successful in engaging a number of outstandingly qualified international experts to contribute to this work, and I would like to congratulate her on the excellent

coordination and editing of this book. I am confident that this outstanding volume will meet with great interest not only from general as well as specialised paediatric radiologists but also from neonatologists and paediatricians. I hope it will enjoy the same success as many previous volumes in this series. Leuven

ALBERT 1. BAERT Preface In the past two decades there have been extraordinary advances in the treatment of critically ill neonates, resulting in improvements in their survival and a significant decrease in morbidity. Infants of very low gestational ages are now surviving.

Spectroscopic Methods for Nanomaterials Characterization

Sabu Thomas, Raju Thomas, Ajesh K Zachariah, Raghvendra Kumar Mishra, 2017-05-19 Nanomaterials Characterization Techniques, Volume Two, part of an ongoing series, offers a detailed analysis of the different types of spectroscopic methods currently being used in nanocharacterization. These include, for example, the Raman spectroscopic method for the characterization of carbon nanotubes (CNTs). This book outlines the different kinds of spectroscopic tools being used for the characterization of nanomaterials and discusses under what conditions each should be used. The book is intended to cover all the major spectroscopic techniques for nanocharacterization, making it an important resource for both the academic community at the research level and the industrial community involved in nanomanufacturing. Explores how spectroscopy and X-ray-based nanocharacterization techniques are applied in modern industry Analyzes all the major spectroscopy and X-ray-based nanocharacterization techniques,

allowing the reader to choose the best for their situation Presents a method-orientated approach that explains how to successfully use each technique

Democratic Competences and Social Practices in Organizations Wolfgang Weber, Michael Thoma, Annette Ostendorf, Lynne Chisholm, 2012-08-30 The contributions in this book address the question of how to develop and foster democratic competences. This may take place via school curricula, resource materials and teaching/learning methods; in workplaces by means of formalised arrangements that encourage self-direction and through the informal processes engendered by expansive working environments; and in personal and community life, including in the course of incidental learning in social networks. The studies and analyses are somewhat nonconformist in its thematic spread and its boundary-crossing between disciplines and perspectives that conventionally live separate lives.
