Greening Our Built World Greg Kats,2013-03-05 “Green” buildings—buildings that use fewer resources to build and to sustain—are commonly thought to be too expensive to attract builders and buyers. But are they? The answer to this question has enormous consequences, since residential and commercial buildings together account for nearly 50% of American energy consumption—including at least 75% of electricity usage—according to recent government statistics. This eye-opening book reports the results of a large-scale study based on extensive financial and technical analyses of more than 150 green buildings in the U.S. and ten other countries. It provides detailed findings on the costs and financial benefits of building green. According to the study, green buildings cost roughly 2% more to build than conventional buildings—far less than previously assumed—and provide a wide range of financial, health and social benefits. In addition, green buildings reduce energy use by an average of 33%, resulting in significant cost savings. *Greening Our Built World* also evaluates the cost effectiveness of “green community development” and presents the results of the first-ever survey of green buildings constructed by faith-based organizations. Throughout the book, leading practitioners in green design—including architects, developers, and property owners—share their own experiences in building green. A compelling combination of rock-solid facts and specific examples, this book proves that green design is both cost-effective and earth-friendly.

From the Manpower Revolution to the Activation Paradigm J. Timo Weishaupt,2011 This illuminating book examines the origins and evolution of labor market policy in Western Europe in three phases: a manpower revolution during the 1960s and 1970s; a phase of international disagreement about the causes of and remedies for unemployment, which triggered a variety of policy responses in the late 1970s and 1980s; and, finally, the emergence of an activation paradigm in the late 1990s, the influence of which continues to reverberate today. J. Timo Weishaupt contends that the evolution of labor market policy is determined not only by historical trajectories or coalitional struggles, but also by policy makers' changing normative and cognitive beliefs. Including case studies of Austria, Denmark, Germany, Ireland, Sweden, and the United Kingdom, this study will be of value to anyone interested in labor market policy and its governance.

Education and Skills for Inclusive Growth, Green Jobs and the Greening of Economies in Asia Rupert Maclean,Shanti Jagannathan,Brajesh Panth,2017-11-19 This book presents an overview of the main research findings and case studies concerning education and skills for inclusive growth, green jobs and the greening of economies. Focusing on India, Indonesia, Sri Lanka and Viet Nam, it discusses government and business sector responses to these issues and how Technical and Vocational Education and Training (TVET) systems and institutions are addressing both the renewal of curricula in the context of green growth dynamics, and patterns of training and skills development to meet demands. In addition, the book examines cross-country issues, concerns and prospects regarding education and skills for inclusive growth and green jobs for the four countries. These include critical themes and issues in the selected industry sectors triggering a demand for green jobs in the region; how industry is responding to those demands; areas impeding the transition from traditional to green practices; the importance of skills development; the role of TVET in addressing industry needs; and reasons for the slow response of TVET to green skills.While other studies conducted in Asia – and internationally - on the same topic have largely relied on secondary sources, this study conducted by the Asian Development Bank and the Education University of Hong Kong (ADB-EdUHK) is unique in that the findings, conclusions and recommendations reported on are based on primary data. As part of the study, TVET providers, business enterprises, policy makers and practitioners were surveyed using questionnaires and face-to-face interviews. In addition, workshops were held in each of the four countries to ascertain the views of key stakeholders in government, nongovernment organisations, members of the international development community, TVET providers and members of the business sector.The book also provides summaries of the case studies undertaken for India, Indonesia, Sri Lanka and Viet Nam.

Democratic Competences and Social Practices in Organizations Wolfgang Weber,Michael Thoma,Annette Ostendorf,Lynne Chisholm,2012-08-30 The contributions in this book address the question of how to develop and foster democratic competences. This may take place via school curricula, resource materials and teaching/learning methods; in workplaces by means of formalised arrangements that encourage self-direction and through the informal processes engendered by expansive working environments; and in personal and community life, including in the course of incidental learning in social networks. The studies and analyses are somewhat nonconformist in its thematic spread and its boundary-crossing between disciplines and perspectives that conventionally live separate lives.

A League of Airmen James A. Winnefeld,Preston Niblack,Dana J. Johnson,1994 This report examines the contributions and limitations of air power in the Persian Gulf War. The authors conclude that, for the first time in modern combat, air power was the equal partner of land and sea power, performing the critical enabling function that led to victory. The authors seek to moderate, however, certain claims made by airpower advocates after the war: they maintain that the war did not demonstrate that a strategic air campaign guarantees victory, but rather that air power, skillfully employed under the right conditions, can neutralize, if not completely destroy, a modern army in the field. Nor did the war display breakthroughs in weapon technology, but rather the prowess of well-trained and motivated airmen and their support crews in using maturing technology. Moreover, the authors maintain, the air war was not fought as jointly as many supposed. The sheer mass of available air power allowed it to be used inefficiently at times to cater to doctrinal preferences of the various services.
