Sports Cardiology Casebook Antonio Pelliccia,2009-07-21 Comparatively little is known about the risk of sudden death associated with exercise in young competitive athletes, and whether the benefits of sports activity outweigh

the hazards of exercise-related fatal events is a clinical dilemma. This is only a small part of the story, however, as there are considerable effects of exercise whether it be at a competitive level or on a ‘leisure’ level on patients of all ages. This in itself is of massive importance to the cardiac patient population as exercise is a key component of effective recovery and recommended as central in the prevention of much cardiac disease.

A Handbook of Global Freshwater Invasive Species Robert A. Francis,2012-03-12 Invasive non-native species are a major threat to global biodiversity. Often introduced accidentally through international travel or trade, they invade and colonize new habitats, often with devastating consequences for the local flora and fauna. Their environmental impacts can range from damage to resource production (e.g. agriculture and forestry) and infrastructure (e.g. buildings, road and water supply), to human health. They consequently can have major economic impacts. It is a priority to prevent their introduction and spread, as well as to control them. Freshwater ecosystems are particularly at risk from invasions and are landscape corridors that facilitate the spread of invasives. This book reviews the current state of knowledge of the most notable global invasive freshwater species or groups, based on their severity of economic impact, geographic distribution outside of their native range, extent of research, and recognition of the ecological severity of the impact of the species by the IUCN. As well as some of the very well-known species, the book also covers some invasives that are emerging as serious threats. Examples covered include a range of aquatic and riparian plants, insects, molluscs, crustacea, fish, amphibians, reptiles and mammals, as well as some major pathogens of aquatic organisms. The book also includes overview chapters synthesizing the ecological impact of invasive species in fresh water and summarizing practical implications for the management of rivers and other freshwater habitats.

If you love Jo Nesbo and Samuel Bjork, you'll love Mons Kallentoft. Praise for the Malin Fors series: 'One of the best-realised female heroines I've read by a male writer.' Guardian 'Kallentoft's books have been called beautiful, exquisite and original. I can see why.' Literary Review 'This is a worthy successor to Larsson's Millennium trilogy.' Booklist Starred Review In the early hours of the morning, the naked body of a young man is discovered in a ditch next to Gota Kanal. The cause of death is mysterious; the body bears no visible traces of violence. The man is soon identified as Peder Akerlund, a former Swedish politician, excluded from his party for racism but since reformed. Then sixteen-year-old Nadja Lundin is reported missing, possibly abducted, the same evening, and there are signs that suggest the two cases might be connected. But what do the victims have in common? And why were they chosen? Gradually, Malin Fors realises that they are dealing with someone who is playing a game with them, who speaks through murders and who will not be silenced. What is he or she trying to say? Desperate to find Nadja alive, the team race against the clock to find an answer before it's too late...
