**Databases and Information Systems V** Hele-Mai Haav, Ahto Kalja, 2009 The Eighth International Baltic Conference on Databases and Information Systems took place on June 2-5 2008 in Tallinn, Estonia. This conference is continuing a series of successful bi-annual Baltic conferences on databases and information systems (IS). The aim is to provide a wide international forum for academics and practitioners in the field of databases and modern information systems for exchanging their achievements in this area. The original research results presented in Databases and Information Systems V mostly belong to novel fields of IS and database research such as database technology and the semantic web, ontology-based IS, IS and AI technologies and IS integration. The contribution of Dr. Jari Palomäki showed how different ontological commitments affect the way we are modeling the world when creating an information system. As semantic technologies have been gaining more attention recently, a special session on semantic interoperability of IS was organized. The invited talks from each Baltic State gave a good insight how semantic interoperability initiatives are developing in each of the Baltic States and how they relate to the European semantic interoperability framework.

**The Starfish and the Spider** Ori Brafman, Rod A. Beckstrom, 2006 After five years of

groundbreaking research, Ori Brafman and Rod A. Beckstrom share some gripping stories. The *Starfish and the Spider* argues that organizations fall into two categories: traditional spiders, which have a rigid hierarchy and top-down leadership, and revolutionary starfish, which rely on the power of peer relationships. This book explores what happens when starfish take on spiders (such as the music industry vs. Napster, Kazaa, and the P2P services that followed). It reveals how established companies and institutions, from IBM to Intuit to the U.S. government, are also learning how to incorporate starfish principles to achieve success.--BOOK JACKET.

**Internet Daemons** Fenwick McKelvey,2018-10-30 A complete history and theory of internet daemons brings these little-known—but very consequential—programs into the spotlight We're used to talking about how tech giants like Google, Facebook, and Amazon rule the internet, but what about daemons? Ubiquitous programs that have colonized the Net's infrastructure—as well as the devices we use to access it—daemons are little known. Fenwick McKelvey weaves together history, theory, and policy to give a full account of where daemons come from and how they influence our lives—including their role in hot-button issues like network neutrality. Going back to Victorian times and the popular thought experiment Maxwell's Demon, McKelvey charts how daemons evolved from concept to reality, eventually blossoming into the pandemonium of code-based creatures that today orchestrates our internet. Digging into real-life examples like sluggish connection speeds, Comcast's efforts to control peer-to-peer networking, and Pirate Bay's attempts to elude daemon control (and skirt copyright), McKelvey shows how daemons have been central to the internet, greatly influencing everyday users. *Internet Daemons* asks important questions about how much control is being handed over to these automated, autonomous programs, and the consequences for transparency and oversight.
