Guide to Enterprise Telework and Remote Access Security (draft) Karen Ann Kent,2009 Many organizations employees and contractors use enterprise telework technologies to perform work from external locations. Most teleworkers use remote access technologies to interface with an organization's non-public computing resources. The nature of telework and remote access technologies permitting access to protected resources from external networks and often external hosts as well generally places them at higher risk than similar technologies only accessed from inside the organization, as well as increasing the risk to the internal resources made available to teleworkers through remote access. This publication provides information on security considerations for several types of remote access solutions, and it makes recommendations for securing a variety of telework and remote access technologies. It also gives advice on creating telework security policies.

Complete Book of Remote Access Victor Kasacavage,2002-12-10 As technology advances, the demand and necessity for seamless connectivity and stable access to servers and networks is increasing exponentially. NIST SP 800-46 R2 Enterprise Telework, Remote Access, and Bring Your Own Device National Institute National Institute of Standards and Technology,2016-07-29 NIST SP 800-46 R2 July 2016 For many organizations, their employees, contractors, business partners, vendors, and/or others use enterprise telework or remote access technologies to perform work from external locations. All components of these technologies, including organization-issued and bring your own device (BYOD) client devices, should be secured against expected threats as identified through threat models. This publication provides information on security considerations for several types of remote access solutions, and it makes recommendations for securing a variety of telework, remote access, and BYOD technologies. It also gives advice on creating related security policies. Why buy a book you can download for free? First you gotta find it and make sure it's the latest version (not always easy). Then you gotta print it using a network printer you share with 100 other people - and its outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use an ink jet printer, buying this book will save you money. It's much more cost-effective to just order the latest version from Amazon.com This book is published by 4th Watch Books and includes copyright material. We publish compact, tightly-bound, full-size books (8 1/2 by 11 inches), with glossy covers. 4th Watch Books is a Service Disabled Veteran-Owned Small Business (SDVOSB), and is not affiliated with the National Institute of Standards and Technology. Securing Citrix XenApp Server in the Enterprise Tariq Azad, 2008-08-08 Citrix Presentation Server allows remote users to work off a network server as if they weren't remote. That means: Incredibly fast access to data and applications for users, no third party VPN connection, and no latency issues. All of these features make Citrix Presentation Server a great tool for increasing access and productivity for remote users. Unfortunately, these same features make Citrix just as dangerous to the network it's running on. By definition, Citrix is granting remote users direct access to corporate servers?..achieving this type of access is also the holy grail for malicious hackers. To compromise a server running Citrix Presentation Server, a hacker need not penetrate a heavily defended corporate or government server. They can simply compromise the far more vulnerable laptop, remote office, or home office of any computer connected to that server by Citrix Presentation Server. All of this makes Citrix Presentation Server a high-value target for malicious hackers. And although it is a high-value target, Citrix Presentation Servers and remote workstations are often relatively easily hacked, because they are often times deployed by overworked system administrators who haven't even configured the most basic security features offered by Citrix. The problem, in other words, isn't a lack of options for securing Citrix instances; the problem is that administrators aren't using them. (eWeek, October 2007). In support of this assertion Security researcher Petko D. Petkov, aka pdp, said in an Oct. 4 posting that his recent testing of Citrix gateways led him to tons of wide-open Citrix instances, including 10 on government domains and four on military domains. The most comprehensive book published for system administrators providing step-by-step instructions for a secure Citrix Presentation Server Special chapter by Security researcher Petko D. Petkov'aka pdp detailing tactics used by malicious hackers to compromise Citrix Presentation Servers Companion Web site contains custom Citrix scripts for administrators to install, configure, and troubleshoot Citrix Presentation Server

Practical Internet Security John R. Vacca, 2007-01-10 As organizations today are linking their systems across enterprise-wide networks and VPNs as well as increasing their exposure to customers, competitors, browsers and hackers on the Internet, it becomes increasingly imperative for Web professionals to be trained in techniques for effectively protecting their sites from internal and external threats. Each connection magnifies the vulnerability to attack. With the increased connectivity to the Internet and the wide availability of automated cracking tools, organizations can no longer simply rely on operating system security to protect their valuable corporate data. Furthermore, the exploding use of Web technologies for corporate intranets and Internet sites has escalated security risks to corporate data and information systems. Practical Internet Security reveals how the Internet is paving the way for secure communications within organizations and on the public Internet. This book provides the fundamental knowledge needed to analyze risks to a system and to implement a security policy that protects information assets from potential intrusion, damage, or theft. It provides dozens of real-life scenarios and examples, as well as hands-on instruction in securing Web communications and sites. You will learn the common vulnerabilities of Web sites; as well as, how to carry out secure communications across unsecured networks. All system administrators and IT security managers will find this book an essential practical resource.
