Player and Avatar David Owen, 2017-06-19 Do you make small leaps in your chair while attempting challenging jumps in Tomb Raider? Do you say Ouch! when a giant hits you with a club in Skyrim? Have you had dreams of being inside the underwater city of Rapture? Videogames cast the player as protagonist in an unfolding narrative. Like actors in front of a camera, gamers' proprioception, or body awareness, can extend to onscreen characters, thus placing them physically within the virtual world. Players may even identify with characters' ideological motivations. The author explores concepts central to the design and enjoyment of videogames--affect, immersion, liveness, presence, agency, narrative, ideology and the player's virtual surrogate: the avatar. Gamer and avatar are analyzed as a cybernetic coupling that suggests fulfillment of Atonin Artaud's vision of the body without organs.

Fundamental Planetary Science Jack J. Lissauer, Imke de Pater, 2019-07-04 A quantitative introduction to the Solar System and planetary systems science for advanced undergraduate students, this engaging textbook explains the wide variety of physical, chemical and geological processes that govern the motions and properties of planets. The authors provide an overview of our current knowledge and discuss some of the unanswered questions at the forefront of research in planetary science and astrobiology today. This updated edition contains the latest data, new references and planetary images and an extensively rewritten chapter on current research on exoplanets. The text concludes with an introduction to the fundamental properties of living organisms and the relationship that life has to its host planet. With more than 200 exercises to help students learn how to apply the concepts covered, this textbook is ideal for a one-semester or two-quarter course for undergraduate students.

Frontiers Of Space And Ground-Based Astronomy Willem Wamsteker, Malcolm S. Longair, Y. Kondo, 1994-08-31 ROSAT Observations G. HASINGER Max-Planck-Institut für extraterrestrische Physik, D-85740 Garching, Germany Abstract. This review describes the most recent advances in the study of the extragalactic soft X-ray background and what we can learn about its constituents. The deepest pointed observations with the ROSAT PSPC are discussed. The logN-logS relation is presented, which reaches to the faintest X-ray fluxes and to the highest AGN surface densities ever achieved. The N(>S) relation shows a 2 density in excess of 400 deg⁻² at the faintest fluxes and a flattening below the Einstein Deep Survey limit. About 60% of the extragalactic background has been resolved in the deepest field. Detailed source spectra and first optical and radio identifications will be discussed. The results are put into perspective of the higher energy X-ray background. Key words: X-rays, background radiations, active galactic nuclei. 1. Introduction The extragalactic X-ray background (XRB), discovered about 30 years ago, has been studied extensively with many X-ray experiments, in particular with the satellites HEAO I and II (see e.g. Boldt 1987) and with ROSAT (e.g. Hasinger et al., 1993). Figure 1 shows a compilation of some of the most recent spectral measurements for the X-ray background. Over the energy range from 3 to about 100 keV its spectrum can be well approximated by an optically thin thermal bremsstrahlung model with kT ~ 40 keV, while at lower X-ray energies a steepening into a new component has been observed (e.g.

The European Network for the development of Advanced

Models to interpret Optical Remote Sensing data over terrestrial environments (ENAMORS) is a consortium of academic and research institutions involved in methodological research and in applications of remote sensing techniques for Earth Observation. It was supported initially through a Concerted Action from the Environment and Climate Research and Technology Development Program in the 4th Framework Program of the European Commission. Its activities include the organization of international scientific conferences, the first of which took place in Tuusula, Finland, from September 17 to 19, 1997. This book contains the proceedings of that conference and effectively summarizes the discussions and conclusions reached by the participants. The title of this meeting was 'Optical Remote Sensing of Terrestrial Surfaces: New Sensors, Advanced Algorithms, and the Opportunity for Novel Applications'. It aimed at assembling representatives from the policy maker, remote sensing research and end-user communities, as well as from national and international space agencies and aerospace industries. Together, they discussed the need for R&D support, as well as the contents and priorities of such a program in this economic sector during the period covered by the 5th Framework Program (1999-2002).

The Cluster and Phoenix Missions C.P. Escoubet, R. Schmidt, C.T. Russell, 2012-12-06 Cluster was one of the two missions - the other being the Solar and Heliospheric Observatory (SOHO) - constituting the Solar Terrestrial Science Programme (STSP), the first 'cornerstone' of ESA's Horizon 2000 Programme. After the catastrophic Ariane-5 accident on 4 June 1996 which destroyed the four Cluster spacecraft, the European Space Agency Science Programme Committee gave approval to refurbish the spare Cluster spacecraft and make it ready for flight. This new spacecraft, considered to be the first of a new fleet, is called Phoenix. In the meantime various options to repeat

the Cluster four-point measurements are being studied. Since Phoenix, as the fifth Cluster spacecraft, will be equipped with the spare Cluster experiments, the instrumentation articles in this book are still appropriate to the new mission. Furthermore, the objectives of the recovery mission, the ground systems, the ground observation program and the theory and modelling efforts all remain unchanged. Thus this series of articles will continue to be essential to the Cluster community and to the general scientific community as the recovery mission is implemented.

Asia's Space Race James Clay Moltz, 2011-12-13 In contrast to the close cooperation practiced among European states, space relations among Asian states have become increasingly tense. If current trends continue, the Asian civilian space competition could become a military race. To better understand these emerging dynamics, James Clay Moltz conducts the first in-depth policy analysis of Asia's fourteen leading space programs, concentrating especially on developments in China, Japan, India, and South Korea. Moltz isolates the domestic motivations driving Asia's space actors, revisiting critical events such as China's 2007 antisatellite weapons test and manned flights, Japan's successful Kaguya lunar mission and Kibo module for the International Space Station (ISS), India's Chandrayaan lunar mission, and South Korea's astronaut visit to the ISS, along with plans to establish independent space-launch capability. He investigates these nations' divergent space goals and their tendency to focus on national solutions and self-reliance rather than regionwide cooperation and multilateral initiatives. He concludes with recommendations for improved intra-Asian space cooperation and regional conflict prevention. Moltz also considers America's efforts to engage Asia's space programs in joint activities and the prospects for future U.S. space leadership. He extends his analysis to the relationship between space programs and economic development in Australia, Indonesia, Malaysia, North Korea, Pakistan, the Philippines, Singapore, Taiwan, Thailand, and Vietnam, making this a key text for international relations and Asian studies scholars.

Ready Player Juan Carlos Gabriel Kelly González, 2023 This book fuses Latinx studies and video game studies to document how Latinx masculinities are portrayed in high-budget action-adventure video games. Developing an original approach to video game experiences, the author theorizes video games as border crossings, and defines a new concept--digital mestizaje--that pushes players, readers, and scholars to deploy a Latinx way of seeing constructive as well as destructive qualities.
