Statistical Record of the Environment Arsen Darnay,1992 SRE covers a wide range of environment conditions, facts, and issues from a statistical point of vantage. The major categories (air and water pollution, solid waste generation and management, hazardous wastes and toxic substances) are covered from various perspectives. SRE also assembles information on special problems and wastes (oil spills, global warming, soil erosion), provides profiles of the pollution control industry and legislation, and presents background information of the sort required to place environmental information into a broader context. Thus SRE shows a good deal of data on industrial production in sectors that are major polluters, presents cost and budgetary information, trends in consumption, public opinion, and the like. Most of the materials included deal with the environment in North America. Certain subjects, however, such as oil spills and global warming, have an international focus.
