*The Music of Bill Monroe* Neil V. Rosenberg,Charles K. Wolfe,2007 Spanning over 1,000 separate performances, The Music of Bill Monroe presents a complete chronological list of all of Bill Monroe's commercially released sound and visual recordings. Each chapter begins with a narrative describing Monroe's life and career at that point, bringing in producers, sidemen, and others as they become part of the story. The narratives read like a who's who of bluegrass, connecting Monroe to the music's larger history and containing many fascinating stories. The second part of each chapter presents the discography. Information here includes the session's place, date, time, and producer; master/matrix numbers, song/tune titles, composer credits, personnel, instruments, and vocals; and catalog/release numbers and reissue data. The only complete bio-discography of this American musical icon, The Music of Bill Monroe is the starting point for any study of Monroe's contributions as a composer, interpreter, and performer.

New Trends of Research in Ontologies and Lexical Resources Alessandro Oltramari,Piek Vossen,Lu Qin,Eduard Hovy,2013-02-01 In order to exchange knowledge, humans need to share a common lexicon of words as well as to access the world models underlying that lexicon. What is a natural process for a human turns out to be an extremely hard task for a machine: computers can't represent knowledge as effectively as humans do, which hampers, for example, meaning disambiguation and communication. Applied ontologies and NLP have been developed to face these challenges. Integrating ontologies with (possibly multilingual) lexical resources is an essential requirement to make human language understandable by machines, and also to enable interoperability and computability across information systems and, ultimately, in the Web. This book explores recent advances in the integration of ontologies and lexical resources, including questions such as building the required infrastructure (e.g., the Semantic Web) and different formalisms, methods and platforms for eliciting, analyzing and encoding knowledge contents (e.g., multimedia, emotions, events, etc.). The contributors look towards next-generation technologies, shifting the focus from the state of the art to the future of Ontologies and Lexical Resources. This work will be of interest to research scientists, graduate students, and professionals in the fields of knowledge engineering, computational linguistics, and semantic technologies.
