Advances in Medicine and Biology Leon V. Berhardt,2018-08-24 The eyes are highly diversified photosensitive structures. In all vertebrates, eyes resemble in molecular composition and are predominantly composed of extracellular matrix (ECM). *Advances in Medicine and Biology*. Volume 134 explores the dual role of ECM in ocular homeostasis and diseases and discusses how this duality can be used to treat such diseases. The view on ECM biology offered by this work is translational and address concepts of basic science and clinical-surgical issues. Following this, the authors aim to provide information about the mechanisms of oxidative stress-mediated apoptosis, to provide updates for previous studies update and some of the current paradigms discussed and to provide a basis for future studies. This review highlights the elementary value of apoptosis, including its effect on tissue homeostasis and cellular stress. The aim of the subsequent study was to investigate microcirculation peculiarities of the covering tissues of the limbs and body in patients with orthopedic pathology and in track-and-field athletes having reached high sport mastership. Spontaneous cerebrospinal fluid (CSF) leaks are a clinical entity in which CSF rhinorrhea occurs in the absence of any inciting event. Spontaneous CSF leaks are associated with elevated intracranial pressure (ICP) or underlying idiopathic intracranial hypertension (IIH). The authors report on a cohort of patients who have undergone nasal endoscopic repair for spontaneous CSF leaks. Wound healing is a widespread feature of multicellular organisms. Evidence illustrates that apoptosis has very important roles in the various phases of the wound healing process. As such, the authors maintain the importance of keeping up-to-date with studies on apoptosis and its associated mechanisms highlighted in the wound healing process, providing a systematic analysis of recent molecular research in wound healing applications. Despite enormous improvements in supportive and standard care, septic shock and liver failure remain major causes of morbidity and mortality in critically ill patients. Plasma separation via centrifugation is a common method for therapeutic plasma exchange in patients with liver failure and septic shock. The authors suggest that the use of a centrifugal approach rather than regular plasma filtration enables the transfer of larger particles into the resulting plasma fraction. The possible advantages of using centrifugation in comparison to hemofiltration in blood cleaning techniques are currently hypothetical. The most commonly used staging classification of the classical form of Kaposi sarcoma was presented by Brambilla et al. in 2003. The authors distinguished four stages of the disease based on the morphology of the cutaneous lesions, location of the skin changes, presence of complications and internal organ involvement. The clinical presentation, diagnosis and management of classical Kaposi sarcoma will be discussed in the closing chapter.

Ion Channels James N. C. Kew, Ceri H. Davies, 2010 Ion channels are intimately involved in the everyday physiological functions that enable us to live a full and varied life. When disease strikes, malfunction of ion channels or their dependent is often involved, either as the cause or the effect of the illness. Thus, billions of dollars have been, and still are being, invested in research to understand the physiological and pathophysiological functions of ion channels in an attempt to develop novel therapeutic treatments for a wide range of diseases. This book provides a comprehensive overview of ion channel structure and function. It comprises two major parts. Part one is an introductory overview of the ion channel superfamily and the generic aspects of ion channel function. This part also reviews the methodologies by which ion channel function can be studied from the perspective of performing detailed biophysical characterization through to the deployment of high throughput approaches for identifying novel ion channel ligands. Part two of the book provides an in-depth review of the individual ion channel subfamilies and, as such, is subdivided into four broad sections: Voltage-Gated Ion Channels, Extracellular Ligand-Gated Ion Channels, Intracellular Ligand-Gated Ion Channels, and Polymodal-Gated Ion Channels, with each chapter focused on specific family members. These chapters have been written by world leading experts and provide a detailed overview of the structure, biophysics, localization, pharmacology, physiology, and disease relevance of each particular ion channel subfamily.

Reviewing both the basic principles of ion channel function and providing a detailed up-to-date review of the physiological and pharmacological aspects of individual ion channel sub-families, this book constitutes both an excellent introduction to the field for non-specialists, as well as a highly valuable reference text for experienced researchers already working in the ion channel area.

Parkinson's Disease Dr. Stewart A. Factor, DO,Dr. William Weiner, MD,2007-12-15 Parkinson's disease (PD) is the second most common neurodegenerative disease in the world. Still the only major text on the subject, the completely revised and updated second edition of Parkinson's Disease: Diagnosis and Clinical Management comes at a time when specialists have made important advances in our understanding of the etiology, pathogenesis, investigation, and management of Parkinson's disease. The book includes 23 completely new chapters, and has updated information on: Genetics Pathology Biomarkers Pathogenesis Impulse control disorders in Parkinson's disease Updated outcome measures Complementary and alternative medicine for the treatment of Parkinson's disease Together the chapters form a comprehensive review of the many issues facing PD physicians today. Lucid and easily readable from beginning to end, each chapter may also stand on its own as a scholarly review of the individual subject. Each one is concisely written and heavily referenced for this purpose. The second edition of Parkinson's Disease: Diagnosis and Clinical Management provides a state-of-the-art review of where we've been, where we are now, and where we are going in treating this disease.

Tables of Characteristic Functions for Solving Boundary-value Problems of the Wave Equation with Application to Supersonic

Interference Jack Norman Nielsen,1957 Tables are presented containing 69,000 values of a set of characteristic functions which first arose in problems of supersonic wing-body interference. The tables are useful in problems of supersonic flow involving aerodynamic shapes which are wholly or in part quasi-cylinders of nearly circular cross section. A number of uses are described in the aerodynamics of bodies alone, body-body or shock-body interference, wing-body interference, the vortex-panel interference. Three illustrative examples are worked out in detail. First, the pressure field due to fuselage indentation is calculated and presented in a form independent of Mach number. Secondly, the tables are applied to a problem involving a previously unpublished solution to the Navier-Stokes equations; namely, the boundary-layer profiles of a circular cylinder moved impulsively with a constant axial force in a viscous incompressible fluid. In the final example, the wave drag of corrugated circular cylinders is calculated as a function of the number of corrugations and their wave length. Several nonaerodynamic applications are pointed out in the fields of acoustics and heat conduction. Generally speaking, the tables are applicable to boundary-value problems of the second kind involving the wave equation in three dimensions with approximately circular cylindrical boundaries or involving the unsteady heat-conduction equation in two space dimensions with nearly circular boundaries.

The Effect of Calorie Restriction and Intermittent Fasting on Health and Disease Hae-Young Chung,2021-01-29 Recent biochemical studies indicate that calorie restriction (CR) is a widely accepted method for anti-aging intervention. CR and intermittent fasting (IF), which involves reduced calories but proper nutritional intake during specific periods, are interventions that can consistently promote health benefits, delay biological aging, and extend both average and maximal lifespan. Furthermore, CR can modulate age-related diseases such as Alzheimer's disease, atherosclerosis, diabetes, obesity, cancer, and others. Advances in omics technologies have provided a technical breakthrough that enabled the investigation of DNA, RNA, proteins, and other cellular molecules and their comprehensive interactions in a biological context. Nowadays, it is possible to analyze and integrate biological processes that occur in aging systems at the molecular level using state-of-the-art techniques such as next-generation sequencing (NGS), proteomics, lipidomics, metabolomics, and epigenomics. Omics technology and systems gerontology provide predictive information on CR effects, molecular mechanisms, and pathways underlying the anti-aging actions of CR and IF. This Special Issue, "The effects of calorie restriction and intermittent fasting on health and disease", focuses on the effects of calorie restriction and intermittent fasting on age-related inflammation, autophagy, metabolism, longevity, mitochondrial function, and age-related diseases.

Recent Advances in Anionic Polymerization T.E. Hogen-Esch,J. Smid,2012-12-06 Over the years the field of anionic polymerization has attracted numerous outstanding scientists, and today it still is being pursued by many researchers all over the world. The exciting discovery of termination-less polymerization processes and living polymers culminating in the development of narrow molecular weight polymers, star polymers, and tailor-made block and graft copolymers, contributed immensely to the rapid expansion of polymer science. Areas of active research in anionic polymerization presently include the structure of ion pairs and their role in regulating polymer structure, ring opening polymerization of heterocyclic monomers, synthesis of well-defined block and graft copolymers including the application of macromers in such systems, telechelic polymers with functional end groups, and other topics. New developments in the organic chemistry of carbanions such as dipolar carbanions impinge on the field of anionic polymerization. More sophisticated characterization techniques have been instrumental in obtaining better correlations between the structure of polymers and that of intermediates leading to their formation. This book contains the proceedings of the international symposium on Recent Advances in Anionic Polymerization and Related Processes which was held at the 1986 spring meeting of the American Chemical Society. It was the first Polymer Division-sponsored meeting exclusively devoted to anionic polymerization since the Houston ACS meeting in the spring of 1980. The proceedings of that meeting were published in the book *Anionic Polymerization*, ACS Symposium Series No. 166, edited by Dr. J. E. McGrath.

Mediterranean-Type Ecosystems F.J. Kruger,D.T. Mitchell,J.U.M. Jarvis,2012-12-06 The theory of ecological convergence underlies the biogeographers' maps of world biome-types. It also determines the degree to which ecological principles, derived from research on particular populations, communities or ecosystems, are generally valid, and hence also to what extent resource management principles are general. To quote Di Castri and Mooney (1973): In effect, in order to assess the transfer of technology, it is essential to know to what extent information acquired from studying one particular ecosystem is applicable to another ecosystem of the same type but situated in a different location. The five relatively small, isolated, mediterranean-climate zones of the earth, each with its distinct fauna and flora, have provided the ideal testing grounds for this theory. A heritage of precisely focused ecosystems research has resulted, beginning with the international comparative analyses conducted by Specht (1969a, b) but with antecedents in earlier studies in South Australia (Specht and Rayson 1957, Specht 1973). Cody and Mooney (1978) reviewed the

information available at the time for the four zones excepting Australia and concluded that the arrays of strategy-types to be found among the different biotas were so similar that they could be explained only in terms of the convergence hypothesis; nevertheless, evident differences in community organization and dynamics, especially phenology, required closer study of resource availability and resource-use patterns to better explain relations between form and function overall, and to assess the degree of convergence at higher levels of organization than the population.

Neurological Practice: An Indian Perspective Wadia, 2005 The book presents an exhaustive exposition of the prevalence and management of neurological disorders in India. It comprehensively covers various infections viral, bacterial, prions and parasitic. It also covers epilepsy, vascular diseases, degenerative and environmental diseases, nutritional deficiency disorders, paediatric neurology, imaging of CNS infections, and other disorders of the nervous system. Each chapter begins with a short historical account of the disease, followed by a critical evaluation of the epidemiological and/or hospital based data. This is then compared with the data of other global populations. A clinical description of the disease is then presented and variations in India from the standard description are highlighted. The chapter then discusses the related pathology, basic mechanism and patient management, and suitably emphasizes the specific variations in India. About the Author : - Noshir H. Wadia, MD, FRCP (London), FNA, FA Sc, FAMS, D Sc (Honoris Causa) is currently serving as Research, Jaslok Hospital and Research Centre, Mumbai. He was the Professor of Neurology at the Grant Medical College and JJ Hospitals, Bombay and is now designated Consultant Neurologist for Life at the same two institutions. He is also Consultant Neurologist to several other hospitals and institutions.
