Narcotic Drugs Doris Clouet, 2012-12-06 The riddle of the biochemical nature of drug dependence of the opiate type has stimulated many studies directed toward understanding the molecular basis of the action of opiates, and, particularly, the phenomena of tolerance, physical dependence, and drug-seeking behavior-phenomena exhibited by man and experimental animals exposed persistently to these drugs. The results of these studies provided a substantial body of information which has been published in the scientific and medical literature. The purely pharmacological responses in man and animals to the opiates have been described and evaluated in many monographs and text-books of pharmacology. However, there is no single source for specific and detailed information on the responses of the body and its tissues to narcotic analgesic drugs at the level of biochemical pharmacology; that is, the molecular history of the drug in the body and the biochemical consequences of its presence in tissue. This volume has been prepared in an effort to repair the deficiency. Two factors have contributed a special urgency to making this information available in convenient form: (1) the current need for a better understanding of the biochemical mechanisms underlying addiction to narcotic drugs, and (2) the progress made in molecular biology which promises that

significant advances in the elucidation of fundamental processes in the central nervous system and their drug-induced aberrations may soon be possible.

Midea Gisela Walberg, 2007-12-30 Two-volume set of text and figures and plates This volume presents the 1994-1997 excavation of the Lower Terraces of the Mycenaean citadel of Midea in the Argolid Plain of Greece. It compliments the author's previous volume on the Lower Terraces of Midea, which was published in 1998. A shrine and megaron were discovered on Terraces 9 and 10. The stratigraphy, architecture, pottery, lithics, small finds, and human and faunal remains dating from the Final Neolithic through Byzantine periods are discussed and cataloged. Additionally, the continuous sequence of LH IIIB-LH IIIC strata on the Lower Terraces revealed the ground plan and expansion of the megaron complex.
