Iron Chelation Therapy Chaim Hershko,2012-12-06 Within the last few years, iron research has yielded exciting new insights into the understanding of normal iron homeostasis. However, normal iron physiology offers little protection from the toxic effects of pathological iron accumulation, because nature did not equip us with effective mechanisms of iron excretion. Excess iron may be effectively removed by phlebotomy in hereditary hemochromatosis, but this method cannot be applied to chronic anemias associated with iron overload. In these diseases, iron chelating therapy is the only method available for preventing early death caused mainly by myocardial and hepatic iron toxicity. Iron chelating therapy has changed the quality of life and life expectancy of thalassemic patients. However, the high cost and rigorous requirements of deferoxamine therapy, and the significant toxicity of deferiprone underline the need for the continued development of new and improved orally effective iron chelators. Such development, and the evolution of improved strategies of iron chelating therapy require better understanding of the pathophysiology of iron toxicity and the mechanism of action of iron chelating drugs. The timeliness of the present volume is underlined by several significant developments in recent years. New insights have been gained into the molecular basis of aberrant iron handling in hereditary disorders and the pathophysiology of iron overload (Chapters 1-5).

Ovid's Lovers Victoria Rimell,2006-06-15 A compelling investigation of the question of the male/female relationship, which is central to Ovid's works.

Guardianship of the Elderly George H. Zimny,1998 Readers receive a basic explanation of guardianship of elderly persons and the process by which it takes place. Through contributions by geriatric psychiatrists, psychologists, attorneys, and judges, this volume provides an understanding of what can occur before, during, and after guardianship. The editors review all aspects of the guardianship process and provide new insights to ensure that the provisions of guardianship are applied in humane and effective ways.

Cell Division Machinery and Disease Monica Gotta,Patrick Meraldi,2017-06-09 This book critically evaluates the causal link between cell division machinery and disease. Further, it identifies key open questions in the field and the means for exploring them. Throughout the various chapters, internationally known contributors present the evidence for and against a causal link between key elements of the cell division machinery and diseases such as cancer, neuropathologies, aging, and infertility. A more clinically oriented chapter further discusses the current and future applications of anti-mitotic drugs in these diseases. *Cell Division Machinery and Disease* is essential reading for graduate or advanced graduate students, researchers or scientists working on cell division as well as clinicians interested in the molecular mechanisms of the discussed diseases.

Anthocyanins from Natural Sources Marianne Su-Ling Brooks,Giovana B Celli,2019-02-11 Interest in anthocyanins has increased in the past few years, due to their potential health-promoting properties as dietary antioxidants. Previously they were known as an important class of natural colorant, orange-red to blue-violet, found in fruits such as berries and in vegetables. This book discusses ways of targeting the delivery of these compounds, through manipulation of exploitation mechanisms. It addresses all aspects from extraction of anthocyanins from natural sources, their health benefits and metabolism to specialized controlled release applications. It will serve as a unique reference for those specializing in the fate of anthocyanins in the body (pharmacokinetics) and the research related to controlled release systems. It will provide an insight for pharmaceutical scientists, food engineers, food scientists and those interested in human health and nutrition.

Maritime Risk Management Phillip Hellwege,Guido Rossi,2021-04-21 Insurance is a legal, an actuarial and a financial product, and it is one out of many risk management strategies. It follows that its history can only be studied in the broader context of the development of such strategies, applying an interdisciplinary approach. The theme of the present volume is maritime risk management. After an overview over the history of insurance, the contributions to the present volume examine different maritime risk management strategies by adopting a variety of methodological approaches. Some contributions focus on normative provisions, others contrast practice with legal scholarship, or focus on the emergence of insurance companies as opposed to individual insurers. Again, other contributions give insights in marine insurance practice in specific cities or analyse insurance practice through the lens of specific insurance litigation. As to the time frame, the different contributions span from antiquity to the nineteenth century.

Wine Chemistry and Biochemistry M. Victoria Moreno-Arribas, Carmen Polo, 2008-11-06 The aim of this book is to describe chemical and biochemical aspects of winemaking that are currently being researched. The authors have selected the very best experts for each of the areas. The first part of the book summarizes the most important aspects of winemaking technology and microbiology. The second most extensive part deals with the different groups of compounds, how these are modified during the various steps of the production process, and how they affect the wine quality, sensorial aspects, and physiological activity, etc. The third section describes undesirable alterations of wines, including those affecting quality and food safety. Finally, the treatment of data will be considered, an aspect which has not yet been tackled in any other book on enology. In this chapter, the authors not only explain the tools available for analytical data processing, but also indicate the most appropriate treatment to apply, depending on the information required, illustrating with examples throughout the chapter from enological literature.
