Maria Langer

*Creating Spreadsheets and Charts in Excel* Maria Langer, 2005 Excel can be daunting: that empty grid just stares you in the face when you start the program, challenging you to fill in the cells with the numbers you need to crunch. How do you start? What do you do? *Creating Spreadsheets and Charts in Excel: Visual QuickProject Guide* answers those questions and puts you on the straight track to getting the job done. This new addition to Peachpit's Visual QuickProject Guide series by Excel guru Maria Langer uses full color screen shots and numbered steps to walk you through the process of creating an Excel workbook file. You'll learn how to build a worksheet from the ground up, enter data, write formulas, and copy cell contents. You'll then see how to duplicate and modify worksheets to fine-tune them for your needs. The project's steps also include creating a consolidation worksheet, formatting all worksheets, creating a colorful pie chart, and setting options for printing your work. There's no time wasted in this book; Maria shows you the quickest and most efficient way to perform each task and doesn't waste paper with lengthy explanations or alternative methods. This slim book is all you'll need to get started creating spreadsheets and charts with Excel.

Residential rental real estate is one way, but what if you already work too many hours and aren't handy around the house? And what about those horror stories about unclogging toilets at 3 a.m.? In *Real Estate Rebel*, Ken lays out a number of strategies that can work for nearly anyone. Single family homes, duplexes, multi-family complexes and syndication. He also reveals some simple but game changing money and debt management techniques that can make you richer without doing any extra work. Ken is an ardent student of the 80/20 Rule which states that 80% of our results tend to come from about 20% of our efforts. And that's what this book is really about ... *Recurrent Events Data Analysis for Product Repairs, Disease Recurrences, and Other Applications* Wayne B. Nelson, 2003-01-01 Survival data consist of a single event for each population unit, namely, end of life, which is modeled with a life distribution. In contrast, many applications involve repeated-events data, where a unit may accumulate any number of events over time. Examples include the number and cost of repairs of products, the number and treatment costs of recurrent disease episodes in patients, and the number of childbirths to statisticians. This applied book provides practitioners with basic nonparametric methods for such data, particularly the plot of the estimate of the population mean cumulative function (MCF), which yields most of the information sought. *Recurrent Events Data Analysis for Product Repairs, Disease Recurrences, and Other Applications* is the first book to present a simple, unified theory that includes data on costs or other values of discrete events, not just the number of events. It surveys computer programs that calculate and plot the MCF estimate with confidence limits, shows their output, and explains how to interpret such plots. Many such calculations can be easily done with a pocket calculator or spreadsheet program. Also, the book introduces basic Poisson and Cox regression models and parametric models, including homogeneous and nonhomogeneous Poisson processes and renewal processes.
