A Laser-Driven Pellet Accelerator for CTR Fuel Injection Jeffrey Craig Hoy, MASSACHUSETTS INST OF TECH CAMBRIDGE., 1977 The high-speed ballistic injection of a solid spherical pellet of deuterium-tritium ice into a magnetically confined thermonuclear reactor plasma has been suggested as a technique of controlled thermonuclear reactor fueling. This experiment is intended to be a preliminary test of the feasibility of accelerating macroscopic fuel pellets using a pulsed ruby laser operating in the conventional mode. Pellet velocities in the range of 1,000-10,000 m/sec are required to enable the pellets to penetrate and effectively refuel the reactor plasma. In this study, cellulose acetate pellets were used to simulate deuterium-tritium fuel. When placed in a vacuum enclosed tube, they were accelerated by the reaction to the laser induced ablation cloud from the exposed half of the pellet. Pellet velocities of over 200 m/sec were achieved. The velocities were measured by stroboscopic photography, and the pellets were weighed to determine the fraction ablated. (Author).

Reviews of Accelerator Science and Technology - Volume 3 Alex Chao, 2011 Each generation yielded growths in brightness and time resolution that were unimaginable just a few years earlier. In particular, the progression from the 3rd to 4th generation is a true revolution; the peak brilliance of coherent soft and hard x-rays has increased by 7-10 orders of magnitude, and the image resolution has reached the angstrom ($1 \text{ \AA} = 10^{-10}$ meters) and femto-second ($1 \text{ fs} = 10^{-15}$ second) scales. These impressive capabilities have fostered fundamental scientific advances and led to an explosion of numerous possibilities in many important research areas including material science, chemistry, molecular biology and the life sciences. Even more remarkably, this field of photon source invention and development shows no signs of slowing down. Studies have already been started on the next generation of x-ray sources, which would have a time resolution in the atto-second ($1 \text{ as} = 10^{-18}$ second) regime, comparable to the time of electron motion inside atoms.

Reviews of Accelerator Science and Technology Alexander W Chao, Weiren Chou, 2011-01-20 Over the last half century we have witnessed tremendous progress in the production of high-quality photons by electrons in accelerators. This dramatic evolution has seen four generations of accelerators as photon sources. The 1st generation used the electron storage rings built primarily for high-energy physics experiments, and the synchrotron radiation from the bending magnets was used parasitically. The 2nd generation involved rings dedicated to synchrotron radiation applications, with the radiation again from the bending magnets. The 3rd generation, currently the workhorse of these photon sources, is dedicated advanced storage rings that employ not only bending magnets but also insertion devices (wigglers and undulators) as the source of the radiation. The 4th generation, which is now entering operation, is photon sources based on the free electron laser (FEL), an invention made in the early 1970s. Each generation yielded growths in brightness and time resolution that were unimaginable just a few years earlier. In particular, the progression from the 3rd to 4th generation is a true revolution; the peak brilliance of coherent soft and hard x-rays has increased by 7-10 orders of magnitude, and the image resolution has reached the angstrom ($1 \text{ \AA} = 10^{-10}$ meters) and femto-second ($1 \text{ fs} = 10^{-15}$ second) scales. These impressive capabilities have fostered fundamental scientific advances and led to an explosion of numerous possibilities in many important research areas including material science, chemistry, molecular biology and the life sciences. Even more remarkably, this field of photon source invention and development shows no signs of slowing down. Studies have already been started on the next generation of x-ray sources, which would have a time resolution in the atto-

second (1 as = 10⁻¹⁸ second) regime, comparable to the time of electron motion inside atoms. It can be fully expected that these photon sources will stand out among the most powerful future science research tools. The physics community as well as the entire scientific community will hear of many pioneering and groundbreaking research results using these sources in the coming years. This volume contains fifteen articles, all written by leading scientists in their respective fields. It is aimed at the designers, builders and users of accelerator-based photon sources as well as general audience who are interested in this topic. Contents: Invention of the Free Electron Laser (J M J Madey) Photon Science at Accelerator-Based Light Sources (J R Schneider) Electromagnetic Radiation in Accelerator Physics (G Stupakov) Storage Ring Light Sources (Z T Zhao) Low-Gain Free Electron Lasers (N Vinokurov) Soft and Hard X-Ray SASE Free Electron Lasers (S Schreiber) Energy Recovery Linacs for Light Sources (R Hajima) Compton Sources of Electromagnetic Radiation (G A Krafft & G Priebe) Accelerator-Based Sources of Infrared and Terahertz Radiation (A-S Müller) The Next Generation of X-Ray Sources (C Pellegrini) Undulators and Other Insertion Devices (E Levichev & N Vinokurov) High Performance Electron Injectors (M Ferrario & T Shintake) Electron-Beam-Based Sources of Ultra-Short X-Ray Pulses (A Zholents) The Large Hadron Collider from Conception to Commissioning: A Personal Recollection (L Evans) G I Budker: Brilliant Physicist, Great Scientific Leader (A N Skrinsky) Readership: Physicists and engineers in accelerator science. Balanced Scorecards and Operational Dashboards with Microsoft Excel Ron Person, 2013-01-09 Learn to maintain and update scorecards and dashboards with Excel. Balanced Scorecards and operational dashboards measure organizational performance and Microsoft Excel is the tool used worldwide to create these scorecards and dashboards. This book covers time-proven step-by-step processes on how to guide executive teams and managers in creating scorecards and dashboards. It then shows Excel developers how to create those scorecards and dashboards. This is the only book that converts theory into practice. The author addresses the people and processes you need to identify strategy and operational metrics and then implement them in dashboards in three versions of Excel. You'll learn how balanced scorecards help organizations translate strategy into action and the ways that performance dashboards enable managers monitor operations. Covers Excel 2010 back to Excel 2003 Shows how to develop consensus on strategy and operational plans with the executive teams Details steps in creating tactical action plans Gives step-by-step guidance in creating the most powerful management dashboards Puts over ten years of experience in one book. **Balanced Scorecards & Operational Dashboards with Microsoft Excel, Second Edition** is the ultimate resource for enhancing your strategic and operational performance.

Reviews Of Accelerator Science And Technology - Volume 9: Technology And Applications Of Advanced Accelerator Concepts Chao Alexander Wu, Chou Weiren, 2017-02-20 Since its invention in the 1920s, particle accelerators have made tremendous progress in accelerator science,

technology and applications. However, the fundamental acceleration principle, namely, to apply an external radiofrequency (RF) electric field to accelerate charged particles, remains unchanged. As this method (either room temperature RF or superconducting RF) is approaching its intrinsic limitation in acceleration gradient (measured in MeV/m), it becomes apparent that new methods with much higher acceleration gradient (measured in GeV/m) must be found for future very high energy accelerators as well as future compact (table-top or room-size) accelerators. This volume introduces a number of advanced accelerator concepts (AAC) — their principles, technologies and potential applications. For the time being, none of them stands out as a definitive direction in which to go. But these novel ideas are in hot pursuit and look promising. Furthermore, some AAC requires a high power laser system. This has the implication of bringing two different communities — accelerator and laser — to join forces and work together. It will have profound impact on the future of our field. Also included are two special articles, one on Particle Accelerators in China' which gives a comprehensive overview of the rapidly growing accelerator community in China. The other features the person-of-the-issue who was well-known nuclear physicist Jerome Lewis Duggan, a pioneer and founder of a huge community of industrial and medical accelerators in the US.
