German Northern Theater of Operations 1940-1945

[Illustrated Edition] Earl Ziemke, 2015-11-06 [Includes 23 maps and 31 illustrations] This volume describes two campaigns that the Germans conducted in their Northern Theater of Operations. The first they launched, on 9 April 1940, against Denmark and

Norway. The second they conducted out of Finland in partnership with the Finns against the Soviet Union. The latter campaign began on 22 June 1941 and ended in the winter of 1944-45 after the Finnish Government had sued for peace. The scene of these campaigns by the end of 1941 stretched from the North Sea to the Arctic Ocean and from Bergen on the west coast of Norway, to Petrozavodsk, the former capital of the Karelo-Finnish Soviet Socialist Republic. It faced east into the Soviet Union on a 700-mile-long front, and west on a 1,300-mile sea frontier. Hitler regarded this theater as the keystone of his empire, and, after 1941, maintained in it two armies totaling over a half million men. In spite of its vast area and the effort and worry which Hitler lavished on it, the Northern Theater throughout most of the war constituted something of a military backwater. The major operations which took place in the theater were overshadowed by events on other fronts, and public attention focused on the theaters in which the strategically decisive operations were expected to take place. Remoteness, German security measures, and the Russians' well-known penchant for secrecy combined to keep information concerning the Northern Theater down to a mere trickle, much of that inaccurate. Since the war, through official and private publications, a great deal more has become known. The present volume is based in the main on the greatest remaining source of unexploited information, the captured German military and naval records. In addition a number of the participants on the German side have very generously contributed from their personal knowledge and experience.

Wireless Communications, Networking and Applications

Qing-An Zeng, 2015-10-28 This book is based on a series of conferences on Wireless Communications, Networking and Applications that have been held on December 27-28, 2014 in Shenzhen, China. The meetings themselves were a response to technological developments in the areas of wireless communications, networking and applications and facilitate

researchers, engineers and students to share the latest research results and the advanced research methods of the field. The broad variety of disciplines involved in this research and the differences in approaching the basic problems are probably typical of a developing field of interdisciplinary research. However, some main areas of research and development in the emerging areas of wireless communication technology can now be identified. The contributions to this book are mainly selected from the papers of the conference on wireless communications, networking and applications and reflect the main areas of interest: Section 1 - Emerging Topics in Wireless and Mobile Computing and Communications; Section 2 - Internet of Things and Long Term Evolution Engineering; Section 3 - Resource Allocation and Interference Management; Section 4 - Communication Architecture, Algorithms, Modeling and Evaluation; Section 5 - Security, Privacy, and Trust; and Section 6 - Routing, Position Management and Network Topologies.

Thinking about Deterrence Air Univeristy Press,2014-09-01

With many scholars and analysts questioning the relevance of deterrence as a valid strategic concept, this volume moves beyond Cold War nuclear deterrence to show the many ways in which deterrence is applicable to contemporary security. It examines the possibility of applying deterrence theory and practice to space, to cyberspace, and against non-state actors. It also examines the role of nuclear deterrence in the twenty-first century and reaches surprising conclusions.

A Commentary on Apollonius Rhodius *Argonautica* III, 1-471 Malcolm Campbell, 2018-07-17 This is a commentary on the third book of Apollonius' *Argonautica*, one of the most influential and admired products of the Hellenistic era. The author sets out to deal comprehensively with all important aspects of the work; in particular, proper attention is paid for the first time to the poet's constant manipulation of the two Homeric epics; many thorny problems of text and interpretation are examined afresh; and a wealth of hitherto unadduced illustrative material drawn from Greek and Roman poetry of various genres and periods is used to shed light on a number of issues. The volume closes with a series of detailed digressive indexes dealing with diction, models and imitations, language and style, metre, transmission, mythology, religion, geography, ethnography and aetiology.

The Form of Cities Alexander R. Cuthbert, 2008-04-15 The Form of Cities offers readers a considered theoretical introduction to the art of designing cities. Demonstrates that cities are replete with symbolic values, collective memory, association and conflict. Proposes a new theoretical understanding of urban design, based in political economy. Demonstrates different ways of conceptualising the city, whether

through aesthetics or the prism of gender, for example. Written in an engaging and jargon-free style, but retains a sophisticated interpretative edge. Complements *Designing Cities* by the same author (Blackwell, 2003).
