*Advances in Visual Information Management* Hiroshi Arisawa,Tiziana Catarci,2013-03-20 Video segmentation is the most fundamental process for appropriate indexing and retrieval of video intervals. In general, video streams are composed of shots delimited by physical shot boundaries. Substantial work has been done on how to detect such shot boundaries automatically (Arman et al. , 1993) (Zhang et al. , 1993) (Zhang et al. , 1995) (Kobla et al. , 1997). Through the integration of technologies such as image processing, speech/character recognition and natural language understanding, keywords can be extracted and associated with these shots for indexing (Wactlar et al. , 1996). A single shot, however, rarely carries enough amount of information to be meaningful by itself. Usually, it is a semantically meaningful interval that most users are interested in retrieving. Generally, such meaningful intervals span several consecutive shots. There hardly exists any efficient and reliable technique, either automatic or manual, to identify all semantically meaningful intervals within a video stream. Works by (Smith and Davenport, 1992) (Oomoto and Tanaka, 1993) (Weiss et al. , 1995) (Hjelsvold et al. , 1996) suggest manually defining all such intervals in the database in advance. However, even an hour long video may have an indefinite number of meaningful intervals. Moreover, video data is multi interpretative. Therefore, given a query, what is a meaningful interval to an annotator may not be meaningful to the user who issues the query. In practice, manual indexing of meaningful intervals is labour intensive and inadequate.

**Economics, Management and Optimization in Sports** Sergiy Butenko,Jaime Gil-Lafuente,Panos M. Pardalos,2013-06-29 Ever since the first Olympic Games in Ancient Greece, sports have become an integral part of human civilization. The last decade has been commemorated by the centennial celebration of the modern Olympic movement. With great anticipation, the Olympics return to Athens, Greece, and we are once again reminded that we live in one of the most exciting periods in the history of sports. Reflecting back on my years of service as the International Olympic Committee president, I cannot overlook the remarkable changes that have taken place in the world of sports during these two decades. The technological development and consequent globalization of the world economy opened up a window of new opportunities for the sports industry. As a result, management, economics, and other sciences have become a significant part of modern

sports. It is my pleasure to introduce this volume comprising an interesting collection of papers dealing with various aspects of management, economics and optimization applied to sports. May this book serve as a valuable source of information to researchers and practitioners as well as to casual readers looking for a deeper insight into the magnificent world of sports.

Creating the Viewer Justin Wyatt, 2024-04-23 A study of the largely hidden world of primary media market research and the different methods used to understand how the viewer is pictured in the industry. The first book on the intersection between market research and media, *Creating the Viewer* takes a critical look at media companies' studies of television viewers, the assumptions behind these studies, and the images of the viewer that are constructed through them. Justin Wyatt examines various types of market research, including talent testing, pilot testing, series maintenance, brand studies, and new show "ideation," providing examples from a range of programming including news, sitcoms, reality shows, and dramas. He looks at brand studies for networks such as E!, and examines how the brands of individuals such as showrunner Ryan Murphy can be tested. Both an analytical and practical work, the book includes sample questionnaires and paths for study moderators and research analysts to follow. Drawn from over fifteen years of

experience in research departments at various media companies, Creating the Viewer looks toward the future of media viewership, discussing how the concept of the viewer has changed in the age of streaming, how services such as Netflix view market research, and how viewers themselves can shift the industry through their media choices, behaviors, and activities.

**Technologies for Intuition** Alaina Lemon, 2018 Cold War paranoia can only partly describe or explain the 20th century dreams of telepathy. The nightmare shades of mind control and crowd frenzy have long alternated with the pastels of love and collective effervescence. Both extremes materialized over time, along tangled circuits of wars, events and interactions staged across borders since at least the 19th century. The Cold War and its fences fed fascination with the workings and the failures of contact and communication. Opposed sides accused each other of jamming media and spinning propaganda even while they mirrored fantasies of connection. This book contrasts and connects Russian and American channels and means to check channels, with special attention to intersections of the telepathic with the theatrical. It theorizes links between historically layered struggles over technologies for intuition and dominant models of communication, commonsense or theoretical. It demonstrates that theories resting on models of individual sincerity and of dyadic communication warp understandings of the USSR and Russia--and thus of the USA, as well. It proposes that attention to the means of making and checking contact, that is, to the phatic functions in language, offers a way out of the impasses and paradoxes of paranoia--Provided by publisher.
