**Framing Global Mathematics** Norbert Schappacher, 2022-06-15 This open access book is about the shaping of international relations in mathematics over the last two hundred years. It focusses on institutions and organizations that were created to frame the international dimension of mathematical research. Today, striking evidence of globalized mathematics is provided by countless international meetings and the worldwide repository ArXiv. The text follows the sinuous path that was taken to reach this state, from the long nineteenth century, through the two wars, to the present day. International cooperation in mathematics was well established by 1900, centered in Europe. The first International Mathematical Union, IMU, founded in 1920 and disbanded in 1932, reflected above all the trauma of WW I. Since 1950 the current IMU has played an increasing role in defining mathematical excellence, as is shown both in the historical narrative and by analyzing data about the International Congresses of Mathematicians. For each of the three periods discussed, interactions are explored between world politics, the advancement of scientific infrastructures, and the inner evolution of mathematics. Readers will thus take a new look at the place of mathematics in world culture, and how international organizations can make a difference. Aimed at mathematicians, historians of science, scientists, and the scientifically inclined general public, the book will be valuable to anyone interested in the history of science on an international level.

The Future of Nursing 2020-2030 National Academies of Sciences Engineering and Medicine, Committee on the Future of Nursing 2020-2030, 2021-09-30 The decade ahead will test the nation's nearly 4 million nurses in new and complex ways. Nurses live and work at the intersection of health, education, and communities. Nurses work in a wide array of settings and practice at a range of professional levels. They are often the first and most frequent line of contact with people of all backgrounds and experiences seeking care and they represent the largest of the health care professions. A nation cannot fully thrive until everyone - no matter who they are, where they live, or how much money they make - can live their healthiest possible life, and helping people live their healthiest life is and has always been the essential role of nurses. Nurses have a critical role to play in achieving the goal of health equity, but they need robust education, supportive work environments, and autonomy. Accordingly, at the request of the Robert Wood Johnson Foundation, on behalf of the National Academy of Medicine, an ad hoc committee under the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and

health care systems that are designed to work for everyone. The Future of Nursing 2020-2030: Charting a Path to Achieve Health Equity explores how nurses can work to reduce health disparities and promote equity, while keeping costs at bay, utilizing technology, and maintaining patient and family-focused care into 2030. This work builds on the foundation set out by The Future of Nursing: Leading Change, Advancing Health (2011) report.

*Decarcerating Correctional Facilities during COVID-19* National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Committee on Law and Justice, Committee on the Best Practices for Implementing Decarceration as a Strategy to Mitigate the Spread of COVID-19 in Correctional Facilities, 2021-01-18 The conditions and characteristics of correctional facilities - overcrowded with rapid population turnover, often in old and poorly ventilated structures, a spatially concentrated pattern of releases and admissions in low-income communities of color, and a health care system that is siloed from community public health - accelerates transmission of the novel coronavirus (SARS-CoV-2) responsible for COVID-19. Such conditions increase the risk of coming into contact with the virus for incarcerated people, correctional staff, and their families and communities. Relative to the general public, moreover, incarcerated individuals have a higher prevalence of chronic health conditions such as asthma, hypertension, and cardiovascular disease, making

them susceptible to complications should they become infected. Indeed, cumulative COVID-19 case rates among incarcerated people and correctional staff have grown steadily higher than case rates in the general population. Decarcerating Correctional Facilities during COVID-19 offers guidance on efforts to decarcerate, or reduce the incarcerated population, as a response to COVID-19 pandemic. This report examines best practices for implementing decarceration as a response to the pandemic and the conditions that support safe and successful reentry of those decarcerated.

**Global Purchasing and Supply Management** Victor H. Pooler,David J.

Pooler,Samuel D. Farney,2007-05-08 Achieving the promise of e-business Two divergent approaches exist in purchasing and supply management organizations today, which give at least the perception of conflicting direction: 1. Some organizations, counseled by consultants and e-procurement software suppliers, but without a clear understanding of current actual procurement processes, have implemented expensive systems with the expectations of tremendous savings and spectacular supply chain improvements. The results often haven't

lived up to the claims. 2. Many buyers and purchasing managers, failing to grasp the potential benefits from e-procurement, have resisted change, and not given their full support to system improvements. Those who have delayed have missed the opportunities of vastly improved processes and supplier contributions. Both have valid viewpoints, but neither has delivered on the true promise of supply chain improvements, so the lessons of this book should benefit both. Active supporters of e-procurement can benefit from understanding the “nuts and bolts” approach to the fundamental supply management processes in a global context. Moreover, buyers and their managers with a better vision of the future will be better prepared to adapt to and support the needed changes.

*The Future of Nursing* Institute of Medicine,Committee on the Robert Wood Johnson Foundation Initiative on the Future of Nursing, at the Institute of Medicine,2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable

insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Motivating Students to Learn Kathryn R. Wentzel, 2014-02-18 Written specifically for teachers, Motivating Students to Learn offers a wealth of research-based principles on the subject of student motivation for use by classroom teachers. Now in its fourth edition, this book discusses specific classroom strategies by tying these principles to the realities of contemporary schools, curriculum goals, and classroom dynamics. The authors lay out effective extrinsic and intrinsic strategies to guide teachers in their day-to-day practice, provide guidelines for adapting to group and individual differences, and discuss ways to reach students who have become

discouraged or disaffected learners. This edition features new material on the roles that classroom goal setting, developing students' interest, and teacher-student and peer relationships play in student motivation. It has been reorganized to address six key questions that combine to explain why students may or may not be motivated to learn. By focusing more closely on the teacher as the motivator, this text presents a wide range of motivational methods to help students see value in the curriculum and lessons taught in the classroom.
