Agricultural Land Use and Natural Gas Extraction Conflicts Madeline Taylor,Tina Hunter,2018-11-02 Onshore unconventional gas operations, in most jurisdictions, operate on the legal principle that all activities during exploration and extraction are 'temporary' in nature. The concept that the onshore unconventional gas industry has a temporary effect on the land on which it operates creates a regulatory paradox. On one hand, unconventional gas activities create energy security, national wealth and a burgeoning export industry. On the other, agricultural land and agriculturalists may be significantly disadvantaged by unconventional gas activities potentially producing permanent damage to non-renewable fertile soils and spoiling the underground water tables. Thus, threatening future food security and food sovereignty. This book explores the socio-regulatory dimensions of coexistence between agricultural and onshore unconventional gas land uses in the jurisdictions with the highest concentration of proven unconventional gas reserves - Australia, Canada, the USA, the UK, France, Poland and China. In exploring the differing regulatory standpoints of unconventional gas land uses on productive farming land in the chosen jurisdictions, this book provides an original three-part categorisation of regulatory approaches addressing the coexistence of agricultural land and unconventional gas namely: adaptive management, precautionary and, finally, statism. It offers a timely and topical approach to socio-legal natural resource governance theory based on the participation, transparency and empowerment for agricultural landholders, examining how differing frameworks such as the collective bargaining framework can create equitable and sustainable contractual arrangements with unconventional gas companies.

The Human Rights Fundaments of Conservation in the Context of the Extraction of Energy Resources María Augusta León

Moreta,2015 English summary: Energy is the driving force of human development and economic growth. The ceaseless demand for energy resources has triggered the development of extraction projects around the world. This, in turn, has exerted a significant pressure on natural resources as well as on the environment. Since the performance of human rights depends on the environment and on access to natural resources, this Study aims to show the extent to which the negative environmental impact arising from extraction operations prevents the effective realization of human rights. The analysis of substantive and procedural human rights in the light of the case law of international human rights courts provides all stakeholders involved in an energy extraction project with the tools and mechanisms to prevent environmental damage and to ensure the protection of human rights. German description: Energie ist ein entscheidender Faktor für das Wirtschaftswachstum. Die unaufhörliche Nachfrage nach Energieressourcen hat die Entwicklung von

Förderprojekten in der ganzen Welt ausgelöst. Dies wiederum hat sowohl einen erheblichen Druck auf die natürlichen Quellen als auch auf die Umwelt ausgeübt. Da die effektive Verwirklichung der Menschenrechte von einer sauberen und gesunden Umwelt abhängt, bezweckt diese Arbeit anhand unterschiedlicher Beispiele zu belegen, dass die Energierohstoffgewinnung sich negativ auf wichtige ökologische Voraussetzungen für die effektive Ausübung der Menschenrechte auswirkt. Im Lichte der Rechtsprechung internationaler Menschenrechtsgerichte zeigt diese Arbeit, dass die Gerichte auf Umweltgrundsätze und -normen zurückgegriffen haben, um Umweltschaden zu verhindern und den Schutz der Menschenrechte zu gewährleisten.

Diversified Agri-food Production Systems for Nutritional Security Anup Das, Subhash Babu, Jayanta Layek, Raghavendra Singh, Saurav Saha, 2024-01-16 Nutritional security and ecosystem sustainability are the biggest challenges of the 21st century. Globally ~ 2.3 billion people suffer from malnutrition. According to estimates by the World Bank, malnutrition globally costs ~ \$ 3.5 trillion per year. On the other hand, the production and availability of staple food is the major emphasis for conventional farming in developing and underdeveloped countries for assured food security. These staple foods are high in carbohydrates and energy availability but low in nutritional value, such as concerning micronutrient, phytochemical, and vitamin contents. Apart from adequate food, there should be consistent access, availability, and affordability of foods and beverages that are nutrient-dense, promote well-being, and minimize diseases. From the experience of the recent COVID-19 crisis, the importance of adequate dietary habits has been emphasized globally since food nutrients are considered inherent sources of immunomodulation.

The Ecotourism-Extraction Nexus Bram Büscher, Veronica Davidov, 2013-08-15 Ecotourism and natural resource extraction may be seen as contradictory pursuits, yet in reality they often take place side by side, sometimes even supported by the same institutions. Existing academic and policy literatures generally overlook the phenomenon of ecotourism in areas concurrently affected by extraction industries, but such a scenario is in fact increasingly common in resource-rich developing nations. This edited volume conceptualises and empirically analyses the 'ecotourism-extraction nexus' within the context of broader rural and livelihood changes in the places where these activities occur. The volume's central premise is that these seemingly contradictory activities are empirically and conceptually more alike than often imagined, and that they share common ground in ethnographic lived experiences in rural settings and broader political economic structures of power and control. The book offers theoretical reflections on why ecotourism and natural resource extraction are systematically decoupled, and epistemologically and analytically re-links them through ethnographic case studies drawing on research from around the world. It should be of interest to students and professionals engaged in the disciplines of geography, anthropology and development studies.
