Materials in Extreme Environments: Volume 929 Daryush Ila, Christian Mailhiot, Premkumar B. Saganti, 2006-09-15 This book investigates the fundamental properties and response of materials in extreme environments such as static and dynamic high pressure, high strain and high strain-rates, high radiation and electromagnetic fields, high and low temperatures, corrosive conditions, environments causing embrittlement, and environments containing atomic oxygen. This is an extremely active and vibrant field of research, in particular because it is now possible to create laboratory conditions similar in pressure, temperature and radiation to those found in planetary interiors and in space. In addition, advanced simulation methods, coupled with high-performance computing platforms, now afford predictions - on a first-principles basis - of the properties of materials in extreme environments. Scientists from a broad spectrum of fields are represented, including space science, planetary science, high-pressure research, shock physics, ultrafast science, and energetic materials research.

Chemical-Mechanical Planarization: Volume 867 A. Kumar, 2005-07-19
Technology requirements associated with the progressive scaling of devices for future technology nodes, coupled with the aggressive introduction of new materials, places tremendous demands on chemical-mechanical polishing. The goal of this 2005 book, which is part of a popular series from MRS, is to bring together experts from a broad spectrum of research and technology groups currently working on CMP, to review advances made, and to offer a comprehensive discussion of future challenges that must be overcome. The book shows trends in the development of consumables, process modules, tool designs, process integration, modeling, defect characterization, and metrology. Topics include: planarization processes and applications;

consumables -CMP pads and slurries; CMP equipment and metrology; and CMP modeling and simulation.

<u>Solid-State Chemistry of Inorganic Materials V: Volume 848 Materials</u> Research Society. Meeting, 2005-07-18 Solid-state chemistry continues to span and to spawn multiple materials research areas, attracting investigators from chemistry, condensed-matter physics, materials science and engineering, ceramics, chemical engineering, and mineralogy/geology, to name a few. The common challenge is to understand and to predict structures and properties of new materials. As with earlier volumes in this series from the Materials Research Society, the presentations here represent interdisciplinary research from around the world and explore not only recent advances in the solid-state chemistry of inorganic materials, but also their impact on commercial applications. The book covers a broad range of topics, including synthesis and characterization of novel functional materials; design and fabrication of nanostructures and nanomaterials; crystal and structural chemistry; catalysis; gas separation and storage; and magnetic and optical applications. Both theoretical and computational studies of solid-state inorganic materials are featured. Joint presentations with solid-state ionics are also particularly fruitful.

Organic/Inorganic Hybrid Materials - 2004: Volume 847 Clément Sanchez, 2005-07-29 Interest in hybrid materials has accelerated recently, in particular because tailoring materials properties through organization of organic/inorganic composites at nanometer length scales is now an important focus for numerous diverse research domains. This book's objective here is to create a communal forum for researchers involved in all areas of organic/inorganic hybrid materials to share perspectives, to learn about leading-edge science and engineering occurring around the world, and to develop new ideas. The book is divided into focus areas that address synthesis and characterization methods, functional hybrid materials, hybrid materials influenced by biology, structured mesoporous materials and materials with multiscale organization. Topics include: methods of patterning hybrid materials; hybrid materials for photonic applications; mesoporous films and monoliths; biofunctional materials; layered hybrid materials; applications-oriented hybrid materials; hybrid materials for electronics, optoelectronics and semiconductor applications; methods of characterizing hybrid materials; and novel synthetic methods.

Group-IV Semiconductor Nanostructures: Volume 832 Materials Research Society. Meeting,2005-05-24 Broad interest and steady progress in the area of Group-IV (Si:Ge:C) semiconductor nanostructures, including quantum dots, wires and wells, has produced a new class of functional materials and devices with characteristic dimensions less than 50nm. This volume brings together scientists from different disciplines to discuss fabrication and characterization techniques and optical and transport properties, as well as applications of Group-IV semiconductor nanostructures. Fields such as photonic systems, nanocrystal memories, light-emitting and THz devices, nanowire-based interconnections and transistors are addressed. Topics

include: nanoscale silicon-based photonic systems; Si/SiGe/SiN heterostructures and devices; Si/SiGe quantum cascade laser for terahertz; three-dimensional Si/SiGe nanostructures; Si nanocrystals and porous Si-light-emitting properties; Si nanocrystals and porous Si - other properties; Group-IV semiconductor nanowires; and rare-earth-doped Group-IV semiconductor nanostructures.
