Analysis and Simulation of Electrical and Computer Systems Damian Mazur, Marek Gołębowski, Mariusz Korkosz, 2018-08-31 This book addresses selected topics in electrical engineering, electronics and mechatronics that have posed serious challenges for both the scientific and engineering communities in recent years. The topics covered range from mathematical models of electrical and electronic components and systems, to simulation

tools implemented for their analysis and further developments; and from multidisciplinary optimization, signal processing methods and numerical results, to control and diagnostic techniques. By bridging theory and practice in the modeling, design and optimization of electrical, electromechanical and electronic systems, and by adopting a multidisciplinary perspective, the book provides researchers and practitioners with timely and extensive information on the state of the art in the field – and a source of new, exciting ideas for further developments and collaborations. The book presents selected results of the XIII Scientific Conference on Selected Issues of Electrical Engineering and Electronics (WZEE 2016), held on May 04–08, 2016, in Rzeszów, Poland. The Conference was organized by the Rzeszów Division of Polish Association of Theoretical and Applied Electrical Engineering (PTETiS) in cooperation with the Faculty of Electrical and Computer Engineering of the Rzeszów University of Technology.

Aging Options (East King County) Rajiv Nagaich, 2013-05-01 Each day in the United States, 10,000 people become eligible to retire. For these individuals, and the thousands of others already retired, retirement issues loom large. Though visions of retirement for most start out as a joyous anticipation of being engaged in activities we did not have time for when working, re-engaging with friends and family, visiting new and exotic places and the like, these visions can be short-lived for many unprepared retirees. The primary reason? An episode with illness (such as a stroke, heart attack, cancer, or a diagnosis of Alzheimers, Parkinsons) can leave the whole family in chaos and render the ill person a huge burden on loved ones. Unplanned illness can lead to many undesirable outcomes, including: A forced and unwelcome move to an institutional care setting; Loss of assets to cover the high cost of care not covered by Medicare and other health insurance; and, A significant burden being placed on loved ones of the ill person. This reality is quite visible to aging Americans who harbor significant anxieties over these issues. For most, this will be the time when we will realize that Medicare does NOT cover long-term care needs in any meaningful fashion. All this leads to the fact that a bout with illness can quickly render traditional retirement planning ineffective in addressing the most critical retirement concerns aging Americans harbor; however, the good news is with proper planning these concerns can be addressed. So what is proper planning? It is coordinated and comprehensive planning around healthcare, housing, financial, and legal issues. It is planning that can help you: Avoid institutional care if that is at all possible; Locate the most appropriate housing alternative if aging at home is not possible Protect your assets not only from probate costs and estate taxes, but from uncovered long-term care and medical costs as well; and, Not become a burden on your loved ones in case of incapacity. The AgingOptions Guide is a primer on these issues and how to develop a plan to have a better retirement than might be possible.

Fundamentals of Heat Exchanger Design Shudhkar Mishra, 2015-08 Heat exchanger has increased immensely from the viewpoint of energy conservation, conversion, recovery, and successful implementation of new energy sources.

Its importance is also increasing from the stand-point of environmental concerns such as thermal pollution, air pollution, water pollution, and waste disposal. Heat exchangers are used in the process, power, transportation, air-conditioning and refrigeration, cryogenic, heat recovery; alternate fuels, and manufacturing industries, as well as being key components of many industrial products available in the marketplace. The heat exchanger design equation can be used to calculate the required heat transfer surface area for a variety of specified fluids, inlet and outlet temperatures and types and configurations of heat exchangers, including counterflow or parallel flow. A value is needed for the overall heat transfer coefficient for the given heat exchanger, fluids, and temperatures. Heat exchanger calculations could be made for the required heat transfer area, or the rate of heat transfer for a heat exchanger of given area.
