Handbook of Sport Neuroscience and Psychophysiology Roland Carlstedt,2018-10-09 Out of the broad arena of sport science and sport psychology, Roland A. Carlstedt presents a comprehensive collection on the neuroscience and associated psychophysiology that underlies and drives sport performance. Featuring sections ranging from the basics and foundations (anatomy and physiology) to the applied (assessment during competition, training, and mental training), *Handbook of Sport Neuroscience and Psychophysiology* is the first volume to provide students, researchers, practitioners, and coaches the latest knowledge on the brain, mind-body processes, and psychophysiological responding in the context of sport performance.

Eye-Tracking Technology Applications in Educational Research Was, Christopher,Sansosti, Frank,Morris, Bradley,2016-09-29 Since its inception, eye-tracking technology has evolved into a critical device in psychological and sociological settings. By tracking eye movement, one can conduct lie detection, learn about neuropsychology, and measure reading response. Recently, these technologies have been implemented in Educational and School Psychology as a way to assess how students interact with content. *Eye-Tracking Technology Applications in Educational Research* enriches the current pool of educational research with cutting-edge applications of eye tracking in education. Seeking to advance this emergent, interdisciplinary field, this publication collects a diverse group of researchers exploring all aspects of this technology as an essential reference for educators, researchers, administrators, and advanced graduate students.

Strengthening the Eyes Bernarr Macfadden,2018-01-29 Excerpt from *Strengthening the Eyes: A New Course in Scientific Eye Training in 28 Lessons; Parts 2 and 3* The iris, which forms a thin curtain behind the cornea, gives the eye its special color and to a large extent its beauty. The color of the iris in newly born babies is blue, and the differing colors which come later in life are due to the addition of a greater or lesser amount of dark pigment. The color is usually more or less in uniformity with the general coloring of the individual. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Learning to see (better): improving visual deficits with perceptual learning Gianluca Campana,Marcello Maniglia,2015-07-09 Perceptual learning can be defined as a long lasting improvement in a perceptual skill following a systematic training, due to changes in brain plasticity at the level of sensory or perceptual areas. Its efficacy has been reported for a number of visual tasks, such as detection or discrimination of visual gratings (De Valois, 1977; Fiorentini & Berardi, 1980, 1981; Mayer, 1983), motion direction discrimination (Ball & Sekuler, 1982, 1987; Ball, Sekuler, & Machamer, 1983), orientation judgments (Fahle, 1997; Shiu & Pashler, 1992; Vogels & Orban, 1985), hyperacuity (Beard, Levi, & Reich, 1995; Bennett & Westheimer, 1991; Fahle, 1997; Fahle & Edelman, 1993; Kumar & Glaser, 1993; McKee & Westheimer, 1978; Saarinen & Levi, 1995), visual search tasks (Ahissar & Hochstein, 1996; Casco, Campana, & Gidiuli, 2001; Campana & Casco, 2003; Ellison & Walsh, 1998; Sireteanu & Rettenbach, 1995) or texture discrimination (Casco et al., 2004; Karni & Sagi, 1991, 1993). Perceptual learning is long-lasting and specific for basic stimulus features (orientation, retinal position, eye of presentation) suggesting a long-term modification at early stages of visual analysis, such as in the striate (Karni & Sagi, 1991; 1993; Saarinen & Levi, 1995; Pourtois et al., 2008) and extrastriate (Ahissar & Hochstein, 1996) visual cortex. Not confined to a basic research paradigm, perceptual learning has recently found application outside the laboratory environment, being used for clinical treatment of a series of visually impairing conditions such as amblyopia (Levi & Polat, 1996; Levi, 2005; Levi & Li, 2009, Polat et al., 2004; Zhou et al., 2006), myopia (Tan & Fong, 2008) or presbyopia (Polat, 2009). Different authors adopted different paradigms and stimuli in order to improve malfunctioning visual abilities, such as Vernier Acuity (Levi, Polat & Hu, 1997), Gratings detection (Zhou et al., 2006), oculomotor training (Rosengarth et al., 2013) and lateral interactions (Polat et al., 2004). The common result of these studies is that a specific training produces not only improvements in trained functions, but also in other, untrained and higher-level visual functions, such as visual acuity, contrast sensitivity and reading speed (Levi et al, 1997a, 1997b; Polat et al., 2004; Polat, 2009; Tan & Fong, 2008). More recently (Maniglia et al. 2011), perceptual learning with the lateral interactions paradigm has been successfully used for improving peripheral vision in normal people (by improving contrast sensitivity and reducing crowding, the interference in target discrimination due to the presence of close elements), offering fascinating new perspectives in the rehabilitation of people who suffer of central vision loss, such as maculopathy patients, partially overcoming the structural differences between fovea and periphery that limit the vision outside the fovea. One of the strongest point, and a distinguishing feature of perceptual learning, is that it does not just improve the subject's performance, but produces changes in brain's connectivity and efficiency, resulting in long-lasting, enduring neural changes. By tailoring the

paradigms on each subject's needs, perceptual learning could become the treatment of choice for the rehabilitation of visual functions, emerging as a simple procedure that doesn't need expensive equipment.

Psychological Dynamics of Sport and Exercise Diane L. Gill, Lavon Williams, Erin J. Reifsteck, 2017-06-23 Psychological Dynamics of Sport and Exercise, Fourth Edition, reflects the latest developments in the field of sport and exercise psychology and presents various applications in a range of physical activity settings. The text emphasizes practical theory, which allows students pursuing careers in teaching, coaching, consulting, exercise instruction and leadership, sports medicine, rehabilitation, and athletic training environments to enhance physical activity experiences for all based on the best available knowledge. With emphasis on practical application, readers can incorporate sport and exercise psychology into both their professional and personal experiences. Authors Diane L. Gill, Lavon Williams, and Erin J. Reifsteck highlight key theoretical work and research to provide guidelines for using sport and exercise psychology in professional practice and personal physical activities. The fourth edition of Psychological Dynamics of Sport and Exercise includes reorganized, revised content and relevant, up-to-date research to emphasize the areas of change and growth in the field in recent years. Specific updates to this edition include the following: • Part IV on emotion is now expanded to include two in-depth chapters—one focusing on emotion and performance and one on physical activity and mental health—as well as a third chapter on stress management • Part III on the popular topic of motivation is reorganized to emphasize contemporary research and connections to professional practice. • The chapter on aggression and social development now includes more current research on prosocial and antisocial behavior as well as an expanded section on positive youth development. • In-class and out-of-class lab activities replace case studies to provide scenario-based, experiential activities for a more applied learning experience. • Updated end-of-chapter summaries, review questions, and recommended readings reinforce key concepts and encourage further study. • Application Point sidebars have been updated to cover a wide variety of professions in order to connect the content with real-world application. • A newly added image bank helps instructors prepare class lectures. Content is organized into five parts representing major topics that are found in sport and exercise psychology curriculums. Part I provides an orientation, with chapters covering the scope, historical development, and current approaches to sport and exercise psychology. Part II focuses on the individual, with chapters on personality, attention and cognitive skills, and self-perceptions. Part III covers the broad topic of motivation, addressing the why question of physical activity behavior. Part IV looks at emotion, including the relationship between physical activity and emotion as well as stress management. Part V considers social processes in chapters on social influence, social development, and group dynamics, as well as cultural diversity. With more in-depth coverage than introductory-level texts, Psychological Dynamics of Sport and Exercise, Fourth Edition, brings sport and exercise psychology to life for students as they prepare for their professional lives. Emphasis is placed on sport and exercise psychology concepts as they apply to three key areas of kinesiology professions: physical education teaching, coaching, and consulting; exercise instruction and fitness leadership; and sports medicine, rehabilitation, and athletic training. By focusing on these professional settings, readers will understand how psychology concepts are integral to real-world situations outside of the classroom.

Psychological Dynamics of Sport and Exercise-4th Edition Gill, Diane, Williams, Lavon, Reifsteck, Erin, 2017-05-05 Psychological Dynamics of Sport and Exercise, Fourth Edition, reflects the latest developments in the field of sport and exercise psychology and presents various applications in a range of physical activity settings.

Neural basis of social learning, social deciding, and other-regarding preferences Steve W C Chang, Masaki Isoda, 2015-03-02 Humans and many other social animals decide, or learn when necessary, what to do in a given social situation by assessing a range of variables related to social states (e.g., competitive or cooperative), others' overt behavior (e.g., response choices and outcomes), others' covert mental states (e.g., beliefs, intentions and desires), and one's own interpersonal inclination (e.g. other-regarding preferences and generosity). Recent studies in social neuroscience have begun to uncover how such social variables are processed, encoded, and integrated in the brain. The goal of the current Research Topic is to promote a better understanding of neural basis of social learning, social decision-making, and other-regarding preferences.
