Organ Donation Institute of Medicine, Board on Health Sciences Policy, Committee on Increasing Rates of Organ Donation, 2006-08-24 Rates of organ donation lag far behind the increasing need. At the start of 2006, more than 90,000 people were waiting to receive a solid organ (kidney, liver, lung, pancreas, heart, or intestine). *Organ Donation* examines a wide range of proposals to increase organ donation, including policies that presume consent for donation as well as the use of financial incentives such as direct payments, coverage of funeral expenses, and charitable contributions. This book urges federal agencies, nonprofit groups, and others to boost opportunities for people to record their decisions to donate, strengthen efforts to educate the public about the benefits of organ donation, and continue to improve donation systems. *Organ Donation* also supports initiatives to increase donations from people whose deaths are the result of irreversible cardiac failure. This book emphasizes that all members of society have a stake in an adequate supply of organs for patients in need, because each individual is a potential recipient as well as a potential donor.

Clinical Xenotransplantation David K. C. Cooper, Guerard Byrne, 2020-09-08 This title provides an illuminating examination of the current state of xenotransplantation – grafting or transplanting organs or tissues between members of different species – and how it might move forward into the clinic. To be sure, this is a critical topic, as a major problem that remains worldwide is an inadequate supply of organs from deceased human donors, severely limiting the number of organ transplants that can be performed each year. Based on presentations given at a major conference on xenotransplantation, this title includes important views from many leading experts who were invited to present their data and opinions on how xenotransplantation can advance into the clinic. Attention was concentrated on pig kidney and heart transplantation as it is in regard to these organs that most progress has been made. Collectively, these chapters effectively highlight the many advantages of xenotransplantation to patients with end-stage organ failure, thereby encouraging the mapping of a concrete pathway to clinical xenotransplantation. The book is organized across 22 chapters, beginning with background information on clinical and experimental xenotransplantation. Following this are discussions addressing how pigs can be genetically engineered for their organs to be resistant to the human immune response through deletion of pig xenoantigens, and the insertion of ‘protective’ human transgenes. Subsequent chapters analyze complications that arise in practice, comparing allotransplant and xenotransplant rejection. The selection of the ideal patients for the first clinical trials is discussed. Finally, the book concludes with an analysis on the regulatory, economic, and

social aspects of this research, including FDA perspectives and the sensitive, psychosocial factors regarding allotransplantation and xenotransplantation. A major and timely addition to the literature, Clinical Xenotransplantation will be of great interest to all researchers, physicians, and academics from other disciplines with an interest in xenotransplantation.

Chronobiotechnology and Chronobiological Engineering L.E. Scheving, Franz

Halberg, Charles F. Ehret, 2012-12-06 High blood pressure (BP) (with fats and smoking) is one of the three roots of cardio-cerebro-renal disease affecting up to 25% of the adult population. Hence, high blood pressure should be recognized and treated, to reduce any complications and prolong life, as noted by Michael Weber of the Veterans Administration Hospital in Long Beach, California. He further emphasizes the need for monitoring before one starts the treatment of high blood pressure. Indeed, he refers to the results of the Australian study on mild hypertension with a large percentage of placebo responders and rightly suggests that many people are treated who should not be because of 'white-coat-associated high blood pressure'. He also points to the lack of standardization of techniques for data analysis and of methods of BP measurement. Ambulatory monitoring under usual conditions without concomitant recording of events does not allow even a qualitative assessment of the impact of varying stimuli, in Weber's opinion.
