Facing the Other: Novel Theories and Methods in Face Perception Research Davide Rivolta, Aina Puce, Mark A Williams, 2016-04-08 We rely heavily on faces during social interactions. Humans possess the ability to recognise thousands of people very quickly and accurately without effort. The serious social difficulties that follow abnormalities of the face recognition system (i.e., prosopagnosia) strongly underline the importance of typical face skills in our everyday life. Over the last fifty years, research on prosopagnosia, along with research in the healthy population, has provided insights into the cognitive and neural features behind typical face recognition. This has also been achieved thanks to non-invasive neuroimaging techniques such as functional Magnetic Resonance Imaging (fMRI), Electroencephalography (EEG), Magnetoencephalography (MEG), Diffusion Tensor Imaging (DTI) and Transcranial Magnetic Stimulation (TMS). However, there is still much debate about the cognitive and neural mechanisms of face perception. In the current “Research Topic” we plan to gather experimental works, opinions, commentaries, mini-reviews and reviews that focus on new or novel theories and methods in face perception research. Where is the field at the moment? Do we need to re-think the experimental procedures we have adopted so far? Again, what kind of techniques (or combination of them) and analysis methods will be important in the future? From the experimental point of view we encourage both behavioural and neuroimaging contributions (e.g., fMRI, EEG, MEG, DTI and TMS). Despite the main emphasis on face perception, memory and identification, we will also consider original works that focus on other aspects of face processing, such as expression recognition, attractiveness judgments and face imagery. In addition, animal investigations and experimental manipulations that alter face recognition abilities in typical human subjects (e.g., hypnosis) are also welcome. Overall, we are proposing a Research Topic that looks at face processing using different perspectives and welcome contributions from different domains such as psychology, neurology, neuroscience, cognitive science and philosophy. The current “Research Topic” evolved over the desire to acknowledge the relatively recent loss of three giants in the field: Drs. Shlomo Bentin, Truett Allison and Andy Calder. We dedicate this “Research Topic” to them and their pioneering studies.

Reimagining Characters with Unreal Engine's MetaHuman Creator Brian Rossney, 2022-12-29 Discover the power of Unreal Engine 5 and the MetaHuman Creator in this illustrated guide to develop realistic digital characters, infusing them with full body and facial animation Key Features Create realistic characters using the MetaHuman Creator using a mixture of preset and custom tools Import your character into Unreal Engine 5 to access more editing options and begin animating it Combine face and body motion capturing to fully animate your digital humans Book Description MetaHuman Creator (MHC) is an online, user-friendly 3D design tool for creating highly realistic digital humans that can be animated within Unreal Engine (UE) and enhanced with motion capture technology. This means that filmmakers and game developers now have access to a high quality, affordable solution that was previously only available to specialist studios. This book will focus on using UE5 and MHC from a filmmaker angle. Firstly, you'll understand how to use the online MHC to create a digital character, changing its facial structure, body type, and clothing. After that, you'll learn all the necessary steps to bring the character into UE5 and set it up for animation. Then, using an iPhone and a webcam to capture face and body movements, you'll mix these motion capture files, refine the animations using the MetaHuman Control Rig, and save these takes to be reused and edited again within the Level Sequencer. On top of that, you'll learn how to create a rendered video file for film production using both the Level Sequencer and a VR Cinematic

Camera. By the end of this book, you'll have created your own MetaHuman character, as well as face and body motion capture data, and learned the necessary skills to give your future projects further realism and creative control. What you will learn

- Create your own bespoke character using MHC
- Develop custom faces based on real people
- Utilize Blueprints to take control of your digital character
- Retarget animations using the Unreal Mannequin
- Use DeepMotion and Live Link for complete body and face animation
- Use the Control Rig to refine animations
- Export and render your character

Who this book is for This book is for filmmakers and hobbyists who are planning to make a film using Unreal Engine for the first time, having worked in live action or purely digital media previously, either professionally or as a hobby. No experience with Unreal Engine is required, however it is useful to have some knowledge of 3D development applications and concepts like wireframes, skin weights, transform tools, and motion capture. It is recommended that you have access to an iPhone X (or a later model). Alternatively, you can use a free or paid version of Faceware, along with a basic webcam.

302 Professional Skincare, Studio Care Guide Richard Huber, 2015-01-01 For many practitioners studio care is key to successful work with their clients. An outstanding facial or other treatment that provides visible results will generate high loyalty and lead directly to home care product choices by the client. Your techniques are part of your personality as much as they are practical methods of problem solving. You are performing and you will be judged by how you present yourself, the cleanliness of your room and the organization of your equipment. The appearance of the products you use and all the necessary tools should reflect very high standards of cleanliness and organization. A haphazard workplace inspires zero confidence and sets a poor impression. Meticulous attention to details is the hallmark of every successful practice. In this guide, we provide skin development techniques that require the use of 302 Skincare products. If you intend to mix products from other lines you risk an unexpected reaction.
