**From Pixels to Features** Jean Claude Simon,1989 Proceedings of a workshop held at Bonas, France, 22-27 August, 1988. The focus of the 35 contributions is on the interpretation and conversion of iconic data (pixels) into features. However, as this problem cannot be isolated from the recognition problem as a whole, several other related problems are also treated, such as the coding and compression.

Practical Computer Vision with SimpleCV Kurt Demaagd,Anthony Oliver,Nathan Oostendorp,Katherine Scott,2012 Learn how to build your own computer vision (CV) applications quickly and easily with SimpleCV, an open source framework written in Python. Through examples of real-world applications, this hands-on guide introduces you to basic CV techniques for collecting, processing, and analyzing streaming digital images. You'll then learn how to apply these methods with SimpleCV, using sample Python code. All you need to get started is a Windows, Mac, or Linux system, and a willingness to put CV to work in a variety of ways. Programming experience is optional. Capture images from several sources, including webcams, smartphones, and Kinect Filter image input so your application processes only necessary information Manipulate images by performing basic arithmetic on pixel values Use feature detection techniques to focus on interesting parts of an image Work with several features in a single image, using the NumPy and SciPy Python libraries Learn about optical flow to identify objects that change between two image frames Use SimpleCV's command line and code editor to run examples and test techniques

*Oracle Data Warehouse Tuning for 10g* Gavin JT Powell,2011-04-08 "This book should satisfy those who want a different perspective than the official Oracle documentation. It will cover all important aspects of a data warehouse while giving the necessary examples to make the reading a lively experience. - Tim Donar, Author and Systems Architect for Enterprise Data Warehouses Tuning a data warehouse database focuses on large transactions, mostly requiring what is known as throughput. Throughput is the passing of large amounts of information through a server, network and Internet environment, backwards and forwards, constantly! The ultimate objective of a data warehouse is the production of meaningful and useful reporting, from historical and archived data. The trick is to make the reports print within an acceptable time frame. A data model contains tables and relationships between tables. Tuning a data model involves Normalization and Denormalization. Different approaches are required depending on the application, such as OLTP or a Data Warehouse. Inappropriate database design can make SQL code impossible to tune. Poor data modeling can have a most profound effect on database performance since all SQL code is constructed from the data model. \* Takes users beyond

basics to critical issues in running most efficient data warehouse applications \* Illustrates how to keep data going in and out in the most productive way possible \* Focus is placed on Data Warehouse performance tuning

**SQL Tuning** Dan Tow,2003-11-19 A poorly performing database application not only costs users time, but also has an impact on other applications running on the same computer or the same network. SQL Tuning provides an essential next step for SQL developers and database administrators who want to extend their SQL tuning expertise and get the most from their database applications. There are two basic issues to focus on when tuning SQL: how to find and interpret the execution plan of an SQL statement and how to change SQL to get a specific alternate execution plan. SQL Tuning provides answers to these questions and addresses a third issue that's even more important: how to find the optimal execution plan for the query to use. Author Dan Tow outlines a timesaving method he's developed for finding the optimum execution plan--rapidly and systematically--regardless of the complexity of the SQL or the database platform being used. You'll learn how to understand and control SQL execution plans and how to diagram SQL queries to deduce the best execution plan for a query. Key chapters in the book include exercises to reinforce the concepts you've learned. SQL Tuning concludes by addressing special concerns and unique solutions to unsolvable problems. Whether you are a programmer who develops SQL-based applications or a database administrator or other who troubleshoots poorly tuned applications, SQL Tuning will arm you with a reliable and deterministic method for tuning your SQL queries to gain optimal performance.

**Content-Based Image Classification** Rik Das, 2020-12-22 Content-Based Image Classification: Efficient Machine Learning Using Robust Feature Extraction Techniques is a comprehensive guide to research with invaluable image data. Social Science Research Network has revealed that 65% of people are visual learners. Research data provided by Hyerle (2000) has clearly shown 90% of information in the human brain is visual. Thus, it is no wonder that visual information processing in the brain is 60,000 times faster than text-based information (3M Corporation, 2001). Recently, we have witnessed a significant surge in conversing with images due to the popularity of social networking platforms. The other reason for embracing usage of image data is the mass availability of high-resolution cellphone cameras. Wide usage of image data in diversified application areas including medical science, media, sports, remote sensing, and so on, has spurred the need for further research in optimizing archival, maintenance, and retrieval of appropriate image content to leverage data-driven decision-making. This book demonstrates several techniques of image processing to represent image data in a desired format for information identification. It discusses the application of machine learning and deep learning for identifying and categorizing appropriate image data helpful in designing automated decision support systems. The book offers comprehensive coverage of the most essential topics, including: Image feature extraction with novel handcrafted techniques (traditional feature extraction) Image feature extraction with automated techniques (representation learning with CNNs) Significance of fusion-based approaches in enhancing classification accuracy MATLAB® codes for implementing the techniques Use of the Open Access data mining tool WEKA for multiple tasks The book is intended for budding researchers, technocrats, engineering students, and machine learning/deep learning enthusiasts who are willing to start their computer vision journey with content-based image recognition. The readers will get a clear picture of the essentials for transforming the image data into valuable means for insight generation. Readers will learn coding techniques necessary to propose novel mechanisms and disruptive approaches. The WEKA guide provided is beneficial for those uncomfortable coding for machine learning algorithms. The WEKA tool assists the learner in implementing machine learning algorithms with the click of a button. Thus, this book will be a stepping-stone for your machine learning journey. Indian Americans (Part-I) Pradeep Thakur, 2009 Anand G. Mahindra, one of the most successful business men of India Inc., recently added another feather to his cap--Satyam Computer Services Ltd, which was counted as the fourth largest Information Technology (IT) services firm of India until the revelation of a financial fraud by its founder chairman. It was a risk that even the top three Indian IT companies of India avoided, but Anand Mahindra went ahead with the calculated risk of bidding for Satyam that turned out to be--historical and game changer-- in his own words. Venturbay Consultants Pvt Ltd, a subsidiary of Tech Mahindra Ltd., India's sixth largest software exporter outbid the diversified conglomerate Larsen & Toubro Ltd, U.S. based Cognizant Technology Solutions and American investor Wilbur Ross to acquire a controlling stake in Satyam Computer. Anand Mahindra was among those business heads at the helm of family owned businesses who acknowledged that ownership should be separate from management. The professionalism has paid off well and his flagship firm Mahindra & Mahindra Ltd, one of India's leading automotive manufacturers known for its tractors, has carved out a niche space in the passenger vehicles space also with successful sports utility vehicle (SUV) models such as Scorpio and Xylo. The Scorpio, developed from scratch for just \$120 million, became a case study at the Harvard Business School. Another group

company Mahindra Holidays and Resorts has just ended a four-month long drought at India's initial public offering (IPO) market. When Anand Mahindra joined the family business in early 1980s, he had to struggle to change the work culture at the grass root level. Then he focused on diversifying the business and the Group has now significant presence in sectors such as automobiles, financial services, trade and logistics, hospitality, automotive components, information technology and infrastructure development. Mahindra, India's top multi-utility vehicle maker and the world's fourth-largest tractor maker, has about 30% of the Indian tractor's market share, the world's largest by volume. Mahindra also has strong presence in urban and foreign markets like Russia, Brazil, Columbia and Africa. Mahindra was a co-founder of Kotak Mahindra Finance Ltd., which in 2003 was converted into a bank.
