

Fast Lotto Combinations Generator

Kasey Henricks,David G. Embrick

Matters Computational Jörg Arndt, 2010-10-01 This book provides algorithms and ideas for computationalists. Subjects treated include low-level algorithms, bit wizardry, combinatorial generation, fast transforms like the Fourier transform, and fast arithmetic for both real numbers and finite fields. Various optimization techniques are described and the actual performance of many given implementations is examined. The focus is on material that does not usually appear in textbooks on algorithms. The implementations are done in C++ and the GP language, written for POSIX-compliant platforms such as the Linux and BSD operating systems.

State Lotteries Kasey Henricks, David G. Embrick, 2016-08-12 Fifty years ago, familiar images of the lottery would have been strange, as no state lottery existed then. Few researchers have uncovered the obscure role lotteries play in the changing composition of American taxation. Even less is known about what role race plays in this process. More than simply taxing those on the social margins, the emergence of state lotteries in contemporary American history represents something much more fundamental about state fiscal policy. This book not only uncovers the underlying racial factors that contextualize lottery proliferation in the U.S., but also reveals the racial consequences that lotteries have in terms of redistributing tax liability.
