Central to her approach is a keen understanding of the unique way cats see the world—their need for safety and security, their acute territoriality, and their insatiable desire to catch and kill prey. Her proven C.A.T. cat behavior modification plan is a commonsense course of action that can be specifically tailored to your cat in the context of its behavior problems and its particular household environment. Easy-to-implement solutions help transform even the most anxiety-riddled companions into confident, gregarious, and relaxed cats who live longer, happier, and healthier lives. Inside you'll discover • how to harness the power of “friendly pheromones” to improve your cat's appetite, exploration, grooming, and play • where, when, and how to create a litter box environment that will provide ease of access and reduce anxiety for you and your cat • how to end aggression in multiple-cat households and help your cats coexist peacefully Who says you can't train a cat? In this fascinating and indispensable book, the Cat Whisperer takes you inside the mind of a feline to explain why members of one of the world's most inscrutable species act the way they do—and how you can convince them to change their behaviors for the sake of your peace of mind . . . and theirs.

Food Sovereignty, Agroecology and Biocultural Diversity Michel. P. Pimbert,2017-11-01 Contestations over knowledge - and who controls its production - are

a key focus of social movements and other actors that promote food sovereignty, agroecology and biocultural diversity. This book critically examines the kinds of knowledge and ways of knowing needed for food sovereignty, agroecology and biocultural diversity. 'Food sovereignty' is understood here as a transformative process that seeks to recreate the democratic realm and regenerate a diversity of autonomous food systems based on agroecology, biocultural diversity, equity, social justice and ecological sustainability. It is shown that alternatives to the current model of development require radically different knowledges and epistemologies from those on offer today in mainstream institutions (including universities, policy think tanks and donor organizations). To achieve food sovereignty, agroecology and biocultural diversity, there is a need to re-imagine and construct knowledge for diversity, decentralisation, dynamic adaptation and democracy. The authors critically explore the changes in organizations, research paradigms and professional practice that could help transform and co-create knowledge for a new modernity based on plural definitions of wellbeing. Particular attention is given to institutional, pedagogical and methodological innovations that can enhance cognitive justice by giving hitherto excluded citizens more power and agency in the construction of knowledge. The book thus contributes to the democratization of knowledge and power in the domain of food, environment and society. Chapters 1 and 8 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

Fumonisin in Food Lauren S. Jackson, Jonathan W. DeVries, Lloyd B. Bullerman, 2013-11-21 The contents of this book are the proceedings of the ACS symposium, Fumonisin in Food, which was held April 4-6, 1995, at the American Chemical Society National Meeting in Anaheim, CA. This symposium, which was international in scope, brought together researchers from diverse backgrounds in academia, government, and industry. Thirty-three speakers discussed topics ranging from the analysis of fumonisins to toxicology and regulatory aspects. The fumonisins became the spotlight of mycotoxin research in 1988, when researchers at the South African Medical Research Council isolated and structurally characterized the fumonisins. Since 1988, there has been an explosion in the numbers of papers dealing with fumonisin-related topics. The interest in the fumonisins has arisen for several reasons. First, fumonisins are found in measurable concentrations in corn grown throughout the world. Second, these compounds have been implicated as the causative agents in a variety of naturally occurring animal diseases. Finally, there is speculation that fumonisins may in part be responsible for the high incidence of esophageal cancer in regions of the world in which corn is the staple grain.

Unprotected Miriam Grossman, 2007-08-28 Our campuses are steeped in political correctness—that's hardly news to anyone. But no one realizes that radical social agendas have also taken over campus health and counseling centers, with dire consequences. Psychiatrist Miriam Grossman knows this better than anyone. She has treated more than 2,000 students at one of America's most prestigious universities, and she's seen how the anything-goes, women-are-just-like-men, safer-sex agenda is actually making our sons and daughters sick. Dr. Grossman takes issue with the experts who suggest that students' problems can be solved with free condoms and Zoloft. What campus counselors and health

providers must do, she argues, is tell uncomfortable, politically incorrect truths, especially to young patients in their most vulnerable and confused moments. Instead of platitudes and misinformation, it's time to offer them real protection.

Neural Stem Cell Assays Navjot Kaur, Mohan C. Vemuri, 2015-02-16 Neural stem cells offer a valuable model system for delineating the cellular and developmental processes in normal and diseased states of the central nervous system. In particular, neural stem cells have huge potential in regenerative medicine, owing to their expansion capability in culture and the ability to differentiate into multiple sub-neural lineages. Neural Stem Cell Assays provides a detailed and comprehensive review of the basic methods for neural stem cell cultures. Including an overview of progress in the field over the past decade, Neural Stem Cell Assays is a one-stop reference for consistent methods and reliable tools that span the entire assay work flow, from isolation or generation of neural stem cells to characterization, manipulation and final application of neural stem cells in disease paradigms such as Parkinson's disease, multiple sclerosis and amyotrophic lateral sclerosis. An excellent source of information for academic, pharmaceutical and biotechnology researchers who are new to the neural stem cell field, Neural Stem Cell Assays is an invaluable to experienced users who wish to integrate newly developed tools and technologies into their workflow. The book also covers important course material for students at the undergraduate and graduate level who are learning the basics of neural stem cell cultures, and differentiation to sub-neural lineages.
