*E-Commerce* Henry Chan,2001-12-21 A comprehensive introduction to the underlying technologies of e-commerce. This book explores the full range of technologies, protocols, and techniques necessary for building successful e-commerce sites. The authors begin with an overview of the Internet and the Web, then quickly move on to explain server-side programming techniques, cryptography and Internet security, and how to take advantage of leading-edge technologies such as mobile agents, WAP, XML, and data mining tools. Placing this technical know-how in business context, the authors then walk readers through actual e-commerce applications, from Internet payment systems to Web advertising and publishing. A running case study depicting a Virtual Book Store (VBS), step-by-step programming exercises, and real-world examples round out this highly practical, easily accessible guide.

**Dataset Shift in Machine Learning** Joaquin Quinonero-Candela,Masashi Sugiyama,Anton Schwaighofer,Neil D. Lawrence,2022-06-07 An overview of recent efforts in the machine learning

community to deal with dataset and covariate shift, which occurs when test and training inputs and outputs have different distributions. Dataset shift is a common problem in predictive modeling that occurs when the joint distribution of inputs and outputs differs between training and test stages. Covariate shift, a particular case of dataset shift, occurs when only the input distribution changes. Dataset shift is present in most practical applications, for reasons ranging from the bias introduced by experimental design to the irreproducibility of the testing conditions at training time. (An example is - email spam filtering, which may fail to recognize spam that differs in form from the spam the automatic filter has been built on.) Despite this, and despite the attention given to the apparently similar problems of semi-supervised learning and active learning, dataset shift has received relatively little attention in the machine learning community until recently. This volume offers an overview of current efforts to deal with dataset and covariate shift. The chapters offer a mathematical and philosophical introduction to the problem, place dataset shift in relationship to transfer learning, transduction, local learning, active learning, and semi-supervised learning, provide theoretical views of dataset and covariate shift

(including decision theoretic and Bayesian perspectives), and present algorithms for covariate shift. **Conquering Complexity** Mike Hinchey, Lorcan Coyle, 2012-01-03 Software has long been perceived as complex, at least within Software Engineering circles. We have been living in a recognised state of crisis since the first NATO Software Engineering conference in 1968. Time and again we have been proven unable to engineer reliable software as easily/cheaply as we imagined. Cost overruns and expensive failures are the norm. The problem is fundamentally one of complexity: software is fundamentally complex because it must be precise. Problems that appear to be specified quite easily in plain language become far more complex when written in a more formal notation, such as computer

code. Comparisons with other engineering disciplines are deceptive. One cannot easily increase the factor of safety of software in the same way that one could in building a steel structure, for example. Software is typically built assuming perfection, often without adequate safety nets in case the unthinkable happens. In such circumstances it should not be surprising to find out that (seemingly) minor errors have the potential to cause entire software systems to collapse. The goal of this book is to uncover techniques that will aid in overcoming complexity and enable us to produce reliable, dependable computer systems that will operate as intended, and yet are produced on-time, in budget, and are evolvable, both over time and at run time. We hope that the contributions in this book will aid in understanding the nature of software complexity and provide guidance for the control or avoidance of complexity in the engineering of complex software systems.

## **Prenatal and Maternal Diagnosis, Screening and Infant Development Implications Aaron**

Henderson (Editor),2015 One of the challenging issues of contemporary pediatrics is potential long-term effects of maternal cigarette smoking during pregnancy on the subsequent infant behavioral and cognitive development. The chapters in this book address to what extent and in what direction maternal smoking during pregnancy may influence infant's behavior during sleep. Recent reports were highly indicative that sleep disturbances were common in the newborns of the mothers who have been heavy smokers during pregnancy. Snuff consumption during pregnancy is discussed, which has many adverse effects on the fetus, i.e., spontaneous abortion, premature delivery premature sagging of the placenta, vaginal bleeding, high blood pressure and heart rate, premature rupture of membranes, among others. The authors of the third chapter discuss orofacial clefts, and with the development of ultrasound technology, how they can be detected antenatally which can ultimately help with the planning postnatal management of babies. Nowadays, prenatal diagnosis is necessary for pregnant women. In the fourth chapter, technical advancements of using maternal circulating nucleic acids as

the sample in noninvasive studies is introduced, highlighting the utilization of next-generation sequencing in the screening of genetic diseases. The fifth and final chapter introduces Comparative Genomic Hybridization (CGH) analysis in postnatal analysis and its use as a first-tier test in cases of Intellectual Disabilities.

Blockchain Intelligence Zibin Zheng,Hong-Ning Dai,Jiajing Wu,2021-05-31 This book focuses on using artificial intelligence (AI) to improve blockchain ecosystems. Gathering the latest advances resulting from AI in blockchain data analytics, it also presents big data research on blockchain systems. Despite blockchain's merits of decentralisation, immutability, non-repudiation and traceability, the development of blockchain technology has faced a number of challenges, such as the difficulty of

data analytics on encrypted blockchain data, poor scalability, software vulnerabilities, and the scarcity of appropriate incentive mechanisms. Combining AI with blockchain has the potential to overcome the limitations, and machine learning-based approaches may help to analyse blockchain data and to identify misbehaviours in blockchain. In addition, deep reinforcement learning methods can be used to improve the reliability of blockchain systems. This book focuses in the use of AI to improve blockchain systems and promote blockchain intelligence. It describes data extraction, exploration and analytics on representative blockchain systems such as Bitcoin and Ethereum. It also includes data analytics on smart contracts, misbehaviour detection on blockchain data, and market analysis of blockchain-based cryptocurrencies. As such, this book provides researchers and practitioners alike with valuable insights into big data analysis of blockchain data, AI-enabled blockchain systems, and applications driven by blockchain intelligence.

#### **Population Dynamics: Algebraic And Probabilistic Approach Utkir A Rozikov, 2020-04-22 A**

population is a summation of all the organisms of the same group or species, which live in a particular

geographical area, and have the capability of interbreeding. The main mathematical problem for a given population is to carefully examine the evolution (time dependent dynamics) of the population. The mathematical methods used in the study of this problem are based on probability theory, stochastic processes, dynamical systems, nonlinear differential and difference equations, and (non-)associative algebras. A state of a population is a distribution of probabilities of the different types of organisms in every generation. Type partition is called differentiation (for example, sex differentiation which defines a bisexual population). This book systematically describes the recently developed theory of (bisexual) population, and mainly contains results obtained since 2010. The book presents algebraic and probabilistic approaches in the theory of population dynamics. It also includes several dynamical systems of biological models such as dynamics generated by Markov processes of cubic stochastic matrices; dynamics of sex-linked population; dynamical systems generated by a gonosomal evolution operator; dynamical system and an evolution algebra of mosquito population; and ocean ecosystems. The main aim of this book is to facilitate the reader's in-depth understanding by giving a

systematic review of the theory of population dynamics which has wide applications in biology, mathematics, medicine, and physics.

*ICE Specification for Piling and Embedded Retaining Walls* ,2017 This edition retains the three-part approach of the second edition. Part A is an introduction to the essential concepts necessary to procure a piling or retaining wall contract. Part B is the specification and is still the only part of this document intended for incorporation in contracts. Part C provides guidance for use of the specification and essential background information for specifiers and contractors alike. Unlike the second edition, Part 3 guidance notes immediately follow the relevant Part 2 specification requirements. The three sections provide the reader with a full compendium without being overly prescriptive.
