Key Indicators of the Labour Market International Labour Office,2003 This valuable, wide-ranging reference tool meets the ever-increasing demand for timely, accurate and accessible information on the rapidly changing world of work. Now in its third edition, Key Indicators of the Labour Market (KILM) provides the general reader, as well as the expert, with concise explanations and analysis of the data on the world's labour markets. Harvesting vast information from international data repositories, and regional and national statistical sources, this important reference work offers data for over 200 countries for the years 1980, 1990, 1995 and the latest available subsequent five years. The volume employs an expanded, up-to-date range of 20 key labour market indicators allowing researchers to compare and contrast between economies and within regions across time. Using statistical data on the labour force, employment, unemployment, underemployment, educational attainment of the workforce, wages and compensation, productivity and labour costs, labour market flows, and poverty and income distribution as market indicators, it enables users to access the most current information available. Maps and graphics are used throughout to highlight key points. The third edition of the KILM includes interactive software which duplicates the printed book but allows for data updates every six months.

Report Of The Dpf Committee On Long-term Planning**

Robert N Cahn,Roberto Peccei,Michael E Zeller,Jonathon A Bagger,David G Cassel,Paul D Grannis,Frank J Sciulli,1995-09-20 This book is the result of a broad-based and in-depth study of high energy physics commissioned by the Executive Committee of the Division of Particles and Fields of the American Physical Society. This year-long study was initiated in the early 1994, in the wake of

the cancellation of the SSC, and is meant to complement the report of the Drell HEPAP subpanel, charged with providing a vision for the future of the field. The DPF study of high energy physics was organized on the basis of the working groups, each led by a number of co-conveners chosen among established leaders in the various subspecialties in the field. These conveners, in turn, organized their working groups by inviting other active workers in the discipline to participate and gathered further input from the community by holding a variety of specialized meetings and workshops. This book contains the final reports of the 11 working groups assembled for the study, along with an extended overview and executive summary by the editors.

The Humanist Controversy and Other Writings François Matheron, Louis Althusser, 2020-05-05 There can be little doubt that Louis Althusser was one of the most influential philosophers of the twentieth century, and his influence subsists in many of the concepts currently deployed in disciplines such as cultural studies, social theory and literary criticism. Yet Althusser was also a leading intellectual in the French Communist Party and a foremost participant in the debates in the human sciences that are marked by the names of Claude Lvi-Strauss, Jacques Lacan and Georges Canguilhem. His writings were major interventions in a specific political and theoretical conjuncture and it is this aspect of his work that this new collection of previously untranslated texts seeks to reflect. Consisting of writings from the very height of Althusser's intellectual powers, during the period 1966-67, this book covers, among other things, the critique of Lvi-Strauss's structuralism, the theory of discourse and its relationship to psychoanalysis, the place of Ludwig Feuerbach, the tasks of Marxist philosophy, and the famous humanist controversy.

Principles of Free-Electron Lasers H. P. Freund,2012-12-06 At the time that we decided to begin work on this book, several other volumes on the free-electron laser had either been published or were in press. The earliest work of which we were aware was published in 1985 by Dr T. C. Marshall of Columbia University [1]. This book dealt with the full range of research on free-electron lasers, including an overview of the extant experiments. However, the field has matured a great deal since that time and, in our judgement, the time was ripe for a more extensive work which includes the most recent advances in the field. The fundamental work in this field has largely been approached from two distinct and, unfortunately, separate viewpoints. On the one hand, free-electron lasers at sub-millimetre and longer wavelengths driven by low-energy and high-current electron beams have been pursued by the plasma physics and microwave tube communities. This work has confined itself largely to the high-gain regimes in which collective effects may play an important role. On the other hand, short-wavelength free-electron lasers in the infrared and optical regimes have been pursued by the accelerator and laser physics community. Due to the high-energy and low-current electron beams appropriate to this spectral range, these experiments have operated largely in the low-gain single-particle regimes. The most recent books published on the free-electron laser by Dr C. A.
