**History and Hope** Kevin M. Cahill,2013-05-01 The International Humanitarian Affairs Reader is a compilation of the most important chapters in the ten volume series published on this topic by Fordham University Press. Each chapter selected has been edited to delete dated material; where appropriate, chapters will have a brief addendum to present current information. The Series Editor, Kevin M. Cahill M.D., will write a substantial introductory essay explaining the academic evolution of the discipline of international humanitarian assistance. It will focus on the Fordham Experience--its Institute of International Humanitarian Affairs (IIHA) has developed practical programs for training field workers, especially those dealing with complex emergencies following conflicts, man-made or natural disasters. The book series has been as essential part of this effort. The new International Humanitarian Affairs Reader will be divided into seven sections, each introduced by a link page providing continuity for the text. There will be extensive appendices to assist in finding basic acronyms, abbreviations, important conventions, treaties and accepted standards. One appendix will also provide the full table of contents for each volume in the series, and all chapters are available for digital download. The International Humanitarian Affairs Reader, scheduled for publication in Spring 2013, should provide the growing number of people--both within and outside academia--with a better understanding of the multi-faceted demands posed by humanitarian assistance programs. At Fordham University there are programs at both the undergraduate (Minor) and graduate (Masters) levels. Fordham's innovative, very intense, one-month residential course for experienced humanitarian workers--the International Diploma in Humanitarian Assistance (IDHA)--is recognized worldwide. The Institute now has over 2000 graduates from 133 nations. Contributors to The International Humanitarian Affairs Reader include many of the leading figures in international diplomacy, relief and refugee operations, conflict resolution and reconciliation, and transition from disaster to stability and development, from the chaos of war to peace.

**The Places Where Community Is Practiced** Anna Steigemann,2019-02-25 In this open access publication, the social cohesion of urban neighborhoods and their residents is examined, which is often viewed as vulnerable since increased mobility, individualization, wider socio-economic and demographic changes have fundamentally altered the basis for everyday social interaction in urban neighborhoods. Anna Steigemann gives scholarly attention to the concrete places where neighborly interactions still take place and to how these interactions affect local community building. She illuminates and explores the ordinary everyday interactions and social practices in and around shops and gastronomic facilities on a shopping street in Berlin-Neukölln, revealing how these businesses are important places where community is practiced, but

also why they are increasingly threatened by commercial and residential gentrification.

**Cyber Security Politics** Myriam Dunn Cavelty,Andreas Wenger,2022-02-15 This book examines new and challenging political aspects of cyber security and presents it as an issue defined by socio-technological uncertainty and political fragmentation. Structured along two broad themes and providing empirical examples for how socio-technical changes and political responses interact, the first part of the book looks at the current use of cyber space in conflictual settings, while the second focuses on political responses by state and non-state actors in an environment defined by uncertainties. Within this, it highlights four key debates that encapsulate the complexities and paradoxes of cyber security politics from a Western perspective – how much political influence states can achieve via cyber operations and what context factors condition the (limited) strategic utility of such operations; the role of emerging digital technologies and how the dynamics of the tech innovation process reinforce the fragmentation of the governance space; how states attempt to uphold stability in cyberspace and, more generally, in their strategic relations; and how the shared responsibility of state, economy, and society for cyber security continues to be re-negotiated in an increasingly trans-sectoral and transnational governance space. This book will be of much interest to students of cyber security, global governance, technology studies, and international relations. The Open Access version of this book, available at [www.taylorfrancis.com](http://www.taylorfrancis.com), has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license.

**e-Democracy** David Rios Insua,Simon French,2010-09-02 Internet is starting to permeate politics much as it has previously revolutionised education, business or the arts. Thus, there is a growing interest in areas of e-government and, more recently, e-democracy. However, most attempts in this field have just envisioned standard political approaches facilitated by technology, like e-voting or e-debating. Alternatively, we could devise a more transforming strategy based on deploying web based group decision support tools and promote their use for public policy decision making. This book delineates how this approach could be implemented. It addresses foundations, basic methodologies, potential implementation and applications, together with a thorough discussion of the many challenging issues. This innovative text will be of interest to students, researchers and practitioners in the fields of e-government, e-democracy and e-participation and research in decision analysis, negotiation analysis and group decision support.

By examining recently introduced security techniques for wireless point-to-point communications, the book proposes new solutions to physical layer security based on stochastic geometric frameworks for random cellular networks. *Vaccines: A Biography* Andrew W. Artenstein, 2009-12-11 Why another book about vaccines? There are already a few extremely well-written medical textbooks that provide comprehensive, state-of-the-art technical reviews regarding vaccine science. Additionally, in the past decade alone, a number of engrossing, provocative books have been published on various related issues ranging from vaccines against specific diseases to vaccine safety and policy. Yet there remains a significant gap in the literature – the history of vaccines. *Vaccines: A Biography* seeks to fill a void in the extant literature by focusing on the history of vaccines and in so doing, recounts the social, cultural, and scientific history of vaccines; it places them within their natural, historical context. The book traces the lineage – the “biography” – of individual vaccines, originating with deeply rooted medical problems and evolving to an eventual conclusion. Nonetheless, these are not “biographies” in the traditional sense; they do not trace an individual’s growth and development. Instead, they follow an idea as it is conceived and developed, through the contributions of many. These are epic stories of discovery, of risk-takers, of individuals advancing medical science, in the words of the famous physical scientist Isaac Newton, “by standing on the shoulders of giants. ” One grant reviewer described the book’s concept as “triumphalist”; although meant as an indictment, this is only partially inaccurate.
