Historic Hikes to Athabasca Pass, Fortress Lake & Tonquin Valley Emerson Sanford,Janice Sanford Beck,2011 When authors Emerson Sanford and Janice Sanford Beck began backpacking together nearly 20 years ago, they often wondered whose footsteps they were retracing and how today's Rockies trails came to be there. In the Life of the Trail series, they share their findings with hikers and history buffs, adventurers and armchair travellers. Life of the Trail 6 details historic routes in the area north of the Columbia Icefields and south of the Miette River, bordered on the east by the Athabasca and Sunwapta rivers (today's highway 93). Along with the mythical Mounts Hooker and Brown, readers will come across historical character David Thompson, A.P. Coleman, Hudson's Bay Company Governor Sir George Simpson and Group of Seven painters Lawren Harris and A.Y. Jackson.

Training for the New Alpinism Steve House,Scott Johnston,2014-03-11 In Training for the New Alpinism, Steve House, world-class climber and Patagonia ambassador, and Scott Johnston, coach of U.S. National Champions and World Cup Nordic Skiers, translate training theory into practice to allow you to coach yourself to any mountaineering goal. Applying training practices from other endurance sports, House and Johnston demonstrate that following a carefully designed regimen is as effective for alpinism as it is for any other endurance sport and leads to better performance. They deliver detailed instruction on how to plan and execute training tailored to your individual circumstances. Whether you work as a banker or a mountain guide, live in the city or the country, are an ice climber, a mountaineer heading to Denali, or a veteran of 8,000-meter peaks, your understanding of how to achieve your goals grows exponentially as you work with this book. Chapters cover endurance and strength training theory and methodology, application and planning, nutrition, altitude, mental fitness, and assessing your goals and your strengths. Chapters are augmented with inspiring essays by world-renowned climbers, including Ueli Steck, Mark Twight, Peter Habeler, Voytek Kurtyka, and Will Gadd. Filled with photos, graphs, and illustrations.

Mountains James Fargo Balliett,2016-07-01 Always awe-inspiring, mountainous areas contain hundreds of millions of years of history, stretching back to the earliest continental landforms. This book shows how mountains are characterized by their distinctive geological, ecological, and biological conditions. Often, they are so large that they create their own weather patterns. They also store nearly one-third of the world's freshwater—in the form of ice and snow—on their slopes. Despite their daunting size and often formidable climates, mountains are affected by growing local populations, as well as distant influences, such as air pollution and global climate change. Three detailed case studies are presented. The first shows how global warming in East Africa is harming Mount Kenya's regional population, which relies on mountain runoff to irrigate farms for subsistence crops. The second examines the fragile ecology of the South Island Mountain in New Zealand's Southern Alps and how development threatens the region's endemic plant and animal species. The third discusses the impact of mountain use over time in New Hampshire's White Mountains, where management efforts have been used to limit the growing footprint of millions of annual visitors and alpine trekkers.
