The City Of Trembling Leaves Walter Van Tilburg Clark,2024-02-15 *The City of Trembling Leaves* by Walter Van Tilburg Clark was first published in 1945 by Random House and reprinted by the University of Nevada Press in paperback in 1991 with a new foreword by Robert Laxalt. Clark's novel broke new ground in his telling of the story of the rites of passage of a boy, Tim Hazard, into adulthood in the setting of the Western town of Reno, Nevada. The descriptions of Reno's landscape and the realistic characters depict the role of nature during the tumultuous stages of adolescence and the potential risk of obstruction and loss in the attainment of maturity.

Negro Slave Songs in the United States Miles

Fisher, 2013-04-16 This early work by Miles Mark Fisher is both expensive and hard to find in its first edition. It details the importance and meaning of slave songs in America. This fascinating work is thoroughly recommended for inclusion on the bookshelf of all with an interest in slave music and the political history of the United States. Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

American Reference Books Annual Juneal

Chenoweth, 2019-06-24 Read professional, fair reviews by practicing academic, public, and school librarians and subject-area specialists that will enable you to make the best choices from among the latest reference resources. This newest edition of American Reference Books Annual (ARBA) provides librarians with insightful, critical reviews of print and electronic reference resources released or updated in 2017-2018, as well as some from 2019 that were received in time for review in the publication. By using this invaluable guide to consider both the positive and negative aspects of each resource, librarians can make informed

decisions about which new reference resources are most appropriate for their collections and their patrons' needs. Collection development librarians who are working with limited budgets—as is the case in practically every library today—will be able to maximize the benefit from their monetary resources by selecting what they need most for their collection, while bypassing materials that bring limited value to their specific environment.

Team Geek Brian W. Fitzpatrick, Ben Collins-

Sussman, 2012-07-06 In a perfect world, software engineers who produce the best code are the most successful. But in our perfectly messy world, success also depends on how you work with people to get your job done. In this highly entertaining book, Brian Fitzpatrick and Ben Collins-Sussman cover basic patterns and anti-patterns for working with other people, teams, and users while trying to develop software. This is valuable information from two respected software engineers whose popular series of talks—including Working with Poisonous People—has attracted hundreds of thousands of followers. Writing software is a team sport, and human factors have as much influence on the outcome as technical factors. Even if you've spent decades learning the technical side of programming, this book teaches you about the

often-overlooked human component. By learning to collaborate and investing in the soft skills of software engineering, you can have a much greater impact for the same amount of effort. Team Geek was named as a Finalist in the 2013 Jolt Awards from Dr. Dobb's Journal. The publication's panel of judges chose five notable books, published during a 12-month period ending June 30, that every serious programmer should read.

Introduction to Physical Oceanography Robert H. Stewart, 2009-09 This book is written for college juniors and seniors and new graduate students in meteorology, ocean engineering, and oceanography. It begins with a brief overview of what is known about the ocean. This is followed by a description of the ocean basins, for the shape of the seas influences the physical processes in the water. Next, students will study the external forces, wind and heat, acting on the ocean, and the ocean's response. It also includes the equations describing dynamic response of the ocean. For example, the equations of motion, the influence of earth's rotation, and viscosity. Finally, students consider some particular examples: the deep circulation, the equatorial ocean and El Niño, and the circulation of particular areas of the ocean. Contents: 1) A Voyage of Discovery. 2) The Historical Setting. 3) The Physical Setting. 4) Atmospheric

Influences. 5) The Oceanic Heat Budget. 6) Temperature, Salinity and Density. 7) The Equations of Motion. 8) Equations of Motion with Viscosity. 9) Response of the Upper Ocean to Winds. 10) Geostrophic Currents. 11) Wind Driven Ocean Circulation. 12) Vorticity in the Ocean. 13) Deep Circulation in the Ocean. 14) Equatorial Processes. 15) Numerical Models. 16) Ocean Waves. 17) Coastal Processes and Tides.
