IBM System i Security: Protecting i5/OS Data with Encryption Yessong
Johng, Beth Hagemeister, John Concini, Milan Kalabis, Robin Tatam, IBM
Redbooks, 2008-07-24 Regulatory and industry-specific requirements, such as
SOX, Visa PCI, HIPAA, and so on, require that sensitive data must be stored
securely and protected against unauthorized access or modifications. Several
of the requirements state that data must be encrypted. IBM® i5/OS® offers
several options that allow customers to encrypt data in the database tables.
However, encryption is not a trivial task. Careful planning is essential for
successful implementation of data encryption project. In the worst case, you
would not be able to retrieve clear text information from encrypted data.
This IBM Redbooks® publication is designed to help planners, implementers,
and programmers by providing three key pieces of information: Part 1,
Introduction to data encryption on page 1, introduces key concepts,
terminology, algorithms, and key management. Understanding these is important
to follow the rest of the book. If you are already familiar with the general
concepts of cryptography and the data encryption aspect of it, you may skip
this part. Part 2, Planning for data encryption on page 37, provides critical
information for planning a data encryption project on i5/OS. Part 3,
Implementation of data encryption on page 113, provides various
implementation scenarios with a step-by-step guide.

Design Process Improvement John Clarkson,Claudia Eckert,2010-03-26 vi The process is important! I learned this lesson the hard way during my previous existence working as a design engineer with PA Consulting Group's Cambridge Technology Centre. One of my earliest assignments involved the development of a piece of labo- tory automation equipment for a major European pharmaceutical manufacturer.Two things stick in my mind from those early days – first, that the equipment was always to be ready for delivery in three weeks and,second,that being able to write well structured Pascal was not sufficient to deliver reliable software performance. Delivery was ultimately six months late,the project ran some sixty percent over budget and I gained my first promotion to Senior Engineer. At the time it puzzled me that I had been unable to predict the John Clarkson real effort required to complete the automation project – I had Reader in Engineering Design, genuinely believed

that the project would be finished in three Director, Cambridge Engineering weeks. It was some years later that I discovered Kenneth Cooper's Design Centre papers describing the Rework Cycle and realised that I had been the victim of "undiscovered rework". I quickly learned that project plans were not just inaccurate, as most project managers would attest, but often grossly misleading, bearing little resemblance to actual development practice.
