World Investment Report 2019 United Nations Conference on Trade and Development,2019-08-09 The 2019 edition of the World Investment Report focuses on special economic zones (SEZs) which are widely used across most developing and many developed economies. Although the performance of many zones remains below expectations, the rate of establishment of new zones is accelerating as governments increasingly compete for internationally mobile industrial activity. Policymakers face not only the traditional challenges to making SEZs succeed, including the need for strategic focus, sound governance models, and effective investment promotion tools, but also new challenges brought about by the sustainable development imperative, the new industrial revolution, and changing patterns of international production. The Report explores the place of SEZs in today's global investment landscape and provides guidance for policymakers on how to make SEZs work for sustainable development. It presents international investment trends and prospects at global, regional and national levels, as well as the evolution of international production and global value chains. It analyses the latest developments in new policy measures for investment promotion, facilitation and regulation around the world, as well as updates on investment treaties, their reform and investment dispute settlement cases.

The Design and Engineering of Curiosity Emily Lakdawalla, 2018-03-27 This book describes the most complex machine ever sent to another planet: Curiosity. It is a one-ton robot with two brains, seventeen cameras, six wheels, nuclear power, and a laser beam on its head. No one human understands how all of its systems and instruments work. This essential reference to the Curiosity mission explains the engineering behind every system on the rover, from its rocket-powered jetpack to its radioisotope thermoelectric generator to its fiendishly complex sample handling system. Its lavishly illustrated text explains how all the instruments work -- its cameras, spectrometers, sample-cooking oven, and weather station -- and describes the instruments' abilities and limitations. It tells you how the systems have functioned on Mars, and how scientists and engineers have worked around problems developed on a faraway planet: holey wheels and broken focus lasers. And it explains the grueling mission operations schedule that keeps the rover working day in and day out.

Gandharan Buddhism Kurt Behrendt, Pia Brancaccio, 2011-11-01 The ancient region of Gandhara, with its prominent Buddhist heritage, has long fascinated scholars of art history, archaeology, and textual studies. Discoveries of inscriptions, text fragments, sites, and artworks in the last decade have added new pieces to the Gandharan puzzle, redefining how we understand the region and its cultural complexity. The essays in this volume reassess Gandharan Buddhism in light of these

findings, utilizing a multidisciplinary approach that illuminates the complex historical and cultural dynamics of the region. By integrating archaeology, art history, numismatics, epigraphy, and textual sources, the contributors articulate the nature of Gandharan Buddhism and its practices, along with the significance of the relic tradition. Contributions by several giants in the field, including Shoshin Kuwayama, John Rosenfield, and the late Maurizio Taddei, set the geographical, historical, and archaeological parameters for the collection. The result is a productive interdisciplinary conversation on the enigmatic nature of Gandharan Buddhism that joins together a number of significant pieces in a complex cultural mosaic. It will appeal to a large and diverse readership, including those interested in the early Buddhist religious tradition of Asia and its art, as well as specialists in the study of South and Central Asian Buddhist art, archaeology, and texts. A Buddha Dharma Kyokai Foundation Book on Buddhism and Comparative Religion.

Lake Titicaca C. Dejour, 2012-12-06 Lake Titicaca, because of its area and volume and its situation at high altitude within the tropics, is a unique hydrological site in the world. It should be noted that it stands at the transition point between two very distinct geographical regions: the desert fringe of the Pacific coast to the west and the great Amazonian forest extending to the Atlantic coast to the east. Many scientists have been attracted to the lake in the past because of its unusual limnological features. In this book the editors have compiled an exhaustive review of current knowledge from the existing literature and from the results of more recent observations. It is certain that this book will become the essential reference work for scientists wanting to make progress in revealing the lake's secrets. It can be stated unequivocally that this work constitutes a complete review of the present state of knowledge on Lake Titicaca and that it provides the latest results of research on this habitat.

The Earliest Vinaya and the Beginnings of Buddhist Literature Erich Frauwallner,1956

Mississippi Forests and Forestry James E. Fickle,2001 From prehistory to the present, people have harvested Mississippi's trees, cultivated and altered the woodlands, and hunted forest wildlife. Native Americans, the first foresters, periodically burned the undergrowth to improve hunting and to clear land for farming. *Mississippi Forests and Forestry* tells the story of human interaction with Mississippi's woodlands. With forty black-and-white images and extensive documentation, this history debunks long-held myths, such as the notion of the first settlers encountering virgin forests. Drawing on primary materials, government documents, newspapers, interviews, contemporary accounts, and secondary works, historian James E. Fickle describes an ongoing commerce between people and place, from Native American maintenance of the woods, to white exploration and settlement, to early economic activities in Mississippi's forests, to present-day conservation and

responsible use. Viewed over time, issues of conservation are rarely one-sided. Mississippi Forests and Forestry describes how the rise of scientific forestry coincided with the efforts of some early lumber companies and industrial foresters to operate responsibly in harvesting trees and providing for reforestation. Surprisingly, the rise of the pulp and paper industry made reforestation possible in many parts of the state. Mississippi Forests and Forestry is a history of individuals as well as industries. The book looks closely at the ways the lumber industry operated in the woods and mills and at the living and working conditions of people in the industries. It argues that the early industrial foresters, some lumber companies, and pulp and paper manufacturers practiced utilitarian conservation. By the late 1950s, they accomplished what some considered a miracle. Mississippi's forests had been restored. With the rise of environmentalism in the 1960s, popular ideas concerning the proper management and use of forests changed. Practices such as clear-cutting, single-age management, and manufacturing by chip mills became highly controversial. Looking ahead, Mississippi Forests and Forestry examines the issues that remain heated topics of conservation and use.
