Analysis of Biological Networks Björn H. Junker, Falk Schreiber, 2011-09-20 An introduction to biological networks and methods for their analysis *Analysis of Biological Networks* is the first book of its kind to provide readers with a comprehensive introduction to the structural analysis of biological networks at the interface of biology and computer science. The book begins with a brief overview of biological networks and graph theory/graph algorithms and goes on to explore: global network properties, network centralities, network motifs, network clustering, Petri nets, signal transduction and gene regulation networks, protein interaction networks, metabolic networks, phylogenetic networks, ecological networks, and correlation networks. *Analysis of Biological Networks* is a self-contained introduction to this important research topic, assumes no expert knowledge in computer science or biology, and is accessible to professionals and students alike. Each chapter concludes with a summary of main points and with exercises for readers to test their understanding of the material presented. Additionally, an FTP site with links to author-provided data for the book is available for deeper study. This book is suitable as a resource for researchers in computer science, biology, bioinformatics, advanced biochemistry, and the life sciences, and also serves as an ideal reference text for graduate-level courses in bioinformatics and biological research.

Understanding and Combatting African Swine Fever Laura Iacolina, Mary-Louise Penrith, Silvia Bellini, Erika Chenais, Ferran Jori, Maria Montoya, Karl Ståhl, Dolores Gaviera-Widén, 2021-03-15 The recent introduction and spread of African swine fever (ASF) into Europe and Asia has shown that an integrated, multidisciplinary effort is needed to tackle this disease and the complex challenges it poses. This book presents practical guidelines on surveillance for detection of ASF virus, how to prevent outbreaks in the domestic pig sector through biosecurity and cleaning and disinfection routines, including in backyard holdings, and how to control and eradicate this disease in wild boar. Information on pathological lesions and diagnostic practices are provided to support practitioners. Virus infection mechanisms and the consequent host immune response are reported together with an overview on the status of vaccine and treatment development. Information on ASF epidemiology and the European wild boar and domestic pig populations is presented to assist breeders, wildlife managers and policy makers in designing practices aimed at preventing, or controlling and eradicating, this disease. The book provides currently available knowledge in a single place, and identifies knowledge gaps, prompting policy makers and funding bodies to support the scientific community in investigating the gaps.

Approaches in Bioremediation Ram Prasad, Elisabet Aranda, 2018-12-08 Bioremediation refers to the clean-up of pollution in soil, groundwater, surface water, and air using typically microbiological processes. It uses naturally occurring bacteria and fungi or plants to degrade, transform or detoxify hazardous substances to human

health or the environment. For bioremediation to be effective, microorganisms must enzymatically attack the pollutants and convert them to harmless products. As bioremediation can be effective only where environmental conditions permit microbial growth and action, its application often involves the management of ecological factors to allow microbial growth and degradation to continue at a faster rate. Like other technologies, bioremediation has its limitations. Some contaminants, such as chlorinated organic or high aromatic hydrocarbons, are resistant to microbial attack. They are degraded either gradually or not at all, hence, it is not easy to envisage the rates of clean-up for bioremediation implementation. Bioremediation represents a field of great expansion due to the important development of new technologies. Among them, several decades on metagenomics expansion has led to the detection of autochthonous microbiota that plays a key role during transformation. Transcriptomic guides us to know the expression of key genes and proteomics allow the characterization of proteins that conduct specific reactions. In this book we show specific technologies applied in bioremediation of main interest for research in the field, with special attention on fungi, which have been poorly studied microorganisms. Finally, new approaches in the field, such as CRISPR-CAS9, are also discussed. Lastly, it introduces management strategies, such as bioremediation application for managing affected environment and bioremediation approaches. Examples of successful bioremediation applications are illustrated in radionuclide entrapment and retardation, soil stabilization and remediation of polycyclic aromatic hydrocarbons, phenols, plastics or fluorinated compounds. Other emerging bioremediation methods include electro bioremediation, microbe-availed phytoremediation, genetic recombinant technologies in enhancing plants in accumulation of inorganic metals, and metalloids as well as degradation of organic pollutants, protein-metabolic engineering to increase bioremediation efficiency, including nanotechnology applications are also discussed.

Microbial Metatranscriptomics Belowground Manoj Nath,Deepesh Bhatt,Prachi Bhargava,D. K. Choudhary,2021-06-02 The book emphasizes role of functional microbes in soil to improve fertility and plant health in agro-ecosystem. In this compendium main emphasis is on occurrence and distribution of microbial communities, In situ active microbial quorum in rhizosphere, metatranscriptomics for microflora- and fauna, and functional diversity in rhizosphere. The book also highlights the importance of PGPRs in rhizosphere, root endotrophic microbes, functional niche under biotic stress, functional niche under abiotic stress, functional root derived signals, as well as functional microbe derived signals. Approaches deployed in metatranscriptomics, and molecular Tools used in rhizosphere are also discussed in detail. The book presents content is useful for students, academicians, researchers working on soil rhizosphere and as a policy document on sustenance of agriculture.

Nanopore Sequencing: An Introduction Branton Daniel,Deamer David W,2019-04-09 This is an introductory text and laboratory manual to be used primarily in undergraduate courses. It is also useful for graduate students and research scientists who require an introduction to the theory and methods of nanopore sequencing. The book has clear explanations of the principles of this emerging technology, together with instructional material written by experts that describes how to use a MinION nanopore instrument for sequencing in research or the classroom.

Harvard University the book serves as a textbook and lab manual for a university laboratory course designed to intensify the intellectual experience of incoming undergraduates while exploring biology as a field of concentration. Nanopore sequencing is an ideal topic as a path to encourage students about the range of courses they will take in Biology by pre-emptively addressing the complaint about having to take a course in Physics or Maths while majoring in Biology. The book addresses this complaint by concretely demonstrating the range of topics – from electricity to biochemistry, protein structure, molecular engineering, and informatics – that a student will have to master in subsequent courses if he or she is to become a scientist who truly understands what his or her biology instrument is measuring when investigating biological phenomena.

Arsenic in Groundwater M. Manzurul Hassan, Peter J. Atkins, 2016-01-15 Arsenic-contaminated groundwater has created one of the world's largest environmental health crises. This book addresses the arsenic issue within a scientific and social science framework, with the context set by environmental and legal considerations. The text explores the methodological issues of spatial, quantitative, and qualitative enquiries on arsenic poisoning, for instance, using GIS to investigate the distribution of arsenic-laced water in space-time to uncover the pattern of variations over scales from meters to kilometers. The authors also include spatial risk maps that indicate the possible long-term strategies of mitigation.

Linux Appliance Design Bob Smith, John Hardin, Graham Phillips, Bill Pierce, 2007 While there are books that tell readers how to run Linux on embedded hardware and books on how to build a Linux application, this volume is the first book to demonstrate how to merge the two to create a Linux appliance.

Allostery Luisa Di Paola, Alessandro Giuliani, 2021-12-29 This volume explores the basic issues of “allostery” and “network” that are fundamental to studying this field. Chapters in this book look at how the basic “machine-like” proteins, that are similar to “human machines,” need to be organized, architecturally, to relate to different organizational layers. Chapters cover topics such as methodological/computational factors focused on links between allostery and network formalism; the presence of oscillating modes transversing the structure and underlying network wiring of the allosteric process; the “action at distance” by transduction of signals across an organized network structure; and the P53 protein located at the cross-road of cell cycle regulation, genome integrity, and cancer development. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Thorough and practical, *Allostery: Methods and Protocols* is a valuable resource for any scientists and researcher interested in learning more about this developing field.

Extreme Canvas Clive Barker, 2000 In the 1980s a group of entrepreneurs in Ghana created small-scale, mobile film-distribution empires, hitting the road with videocassettes, television monitors, portable gas-powered generators and rolled-up, hand-painted, artist-signed canvas posters. This new medium created the first opportunity for some of the best young painters in Ghana to express themselves on a public scale. In the frequent absence of an original image upon which to base the work they had been commissioned to produce, the artists inevitably created cinematic paintings that were largely interpretive and imagination-driven. In the book's four major essays, author Ernie Wolfe III recounts the rise and fall of the mobile cinema tradition, while noted African art scholar Roy Sieber follows two-dimensional art in Africa from rock paintings in the Sahara to contemporary murals, wall paintings, and barber board paintings as well as the canvas movie posters themselves; Paul Hayes Tucker compares the phenomenon to 19th century European utility-based painting; and poet and art critic John Yau contributes the perspective of an American art historian. In addition, Hollywood film notables such as horror auteur Clive Barker, actor LeVar Burton, actress Anjelica Huston, and director Gus Van Sant contribute chapter introductions.

Anti-media Florian Cramer, 2013 Book reflects on anti-copyright, porn, creative industries, post-punk, Arts and Crafts and constructivism, cooking as contemporary art, Oulipo, post-digitality, mezangelle, Anonymous and 4chan, Fluxus, amateurism, file sharing networks, pop culture, 17th century poetry, electroacoustic music, Neonazi communication guerilla, Rotterdam, romanticism, electronic literature, Mail Art, ontology, Super 8, Rosicrucianism and conceptual art.
