New Trends in Intercalation Compounds for Energy Storage

Christian Julien, J.P. Pereira-Ramos, A. Momchilov, 2002-04-30

Recent advances in electrochemistry and materials science have opened the way to the evolution of entirely new types of energy storage systems: rechargeable lithium-ion batteries, electrochroms, hydrogen containers, etc., all of which have greatly improved electrical performance and other desirable characteristics. This book encompasses all the disciplines linked in the progress from fundamentals to applications, from description and modelling of different materials to technological use, from general diagnostics to methods related to technological control and operation of intercalation compounds. Designing devices with higher specific energy and power will require a more profound understanding of material properties and performance. This book covers the status of materials and advanced activities based on the development of new substances for energy storage.

Environment and Sustainable Development M.H.

Fulekar, Bhawana Pathak, R K Kale, 2013-10-04 Global society in the 21st century is facing challenges of improving the quality of air, water, soil and the environment and maintaining the ecological balance. Environmental pollution, thus, has become a major global concern. The modern growth of industrialization, urbanization, modern agricultural development and energy generation has resulted in the indiscriminate exploitation of natural resources for fulfilling human desires and needs, which has contributed in disturbing the ecological balance on which the quality of our environment depends. Human beings, in the truest sense, are the product of their environment. The man-environment relationship indicates that pollution and deterioration of the environment have a

social origin. The modern technological advancements in chemical processes/operations have generated new products, resulting in new pollutants in such abundant levels that they are above the self-cleaning capacity of the environment. One of the major issues in recent times is the threat to human lives due to the progressive deterioration of the environment from various sources. The impact of the pollutants on the environment will be significant when the accumulated pollutants load will exceed the carrying capacity of the receiving environment. Sustainable development envisages the use of natural resources, such as forests, land, water and fisheries, in a sustainable manner without causing changes in our natural world. The Rio de Janeiro-Earth Summit, held in Brazil in 1992, focused on sustainable development to encourage respect and concern for the use of natural resources in a sustainable manner for the protection of the environment. This book will be beneficial as a source of educational material to post-graduate research scholars, teachers and industrial personnel for maintaining the balance in the use of natural sources for sustainable development.

Sustainable Agriculture Reviews 54 Vinod Kumar Yata, Ashok Kumar Mohanty, Eric Lichtfouse, 2021-09-29 This book reviews concepts and recent advances of biotechnological approaches for

Forecasting the Health of Elderly Populations Kenneth G. Manton, Burton Singer, Richard M. Suzman, 2011-11-23 Models to forecast changes in mortality, morbidity, and disability in elderly populations are essential to national and state policies for health and welfare programs. This volume presents a wide-ranging survey of the forecasting of health of elderly populations, including the modelling of the incidence of chronic diseases in the elderly, the differing perspectives of actuarial and health care statistics, and an assessment of the impact of new technologies on the elderly population. Amongst the topics covered are - uncertainties in projections from census and social security data and actuarial approaches to forecasting - plausible ranges for population growth using biological models and epidemiological time series data - the financing of long term care programs - the effects of major disabling diseases on health expenditures - forecasting cancer

risks and risk factors As a result, this wide-ranging volume will become an indispensable reference for all those whose research touches on these topics.

Stereotactic Body Radiation Therapy Yasushi

Nagata,2015-08-06 This book serves as a practical guide for the use of stereotactic body radiation therapy in clinics. On the basis of more than 10 years of clinical experience with lung cancer, liver cancer and other cancers, a remarkable volume of knowledge has been accumulated. At the same time, great progress in techniques has been achieved. Various new fixing apparatuses, new respiratory regulation techniques, new dose fractionation schedules and new image-guided radiation therapy machines have been developed. This book reviews the history of those developments and reports on various types of toxicities. Review of recent clinical studies is also included. The authors were key members of the JCOG 0403 clinical trials on stereotactic body radiation therapy (SBRT) for both inoperable and operableT1N0M0 primary lung cancer. Readers will learn of the superior outcomes obtained with SBRT for lung cancer and other cancers in terms of local control and toxicities. With its practical focus, this book will benefit

radiation oncologists, medical physicists, medical dosimetrists, radiation therapists and senior nurses as well as medical oncologists and surgical oncologists who are interested in radiotherapy.

A Muslim Theologian in the Sectarian Milieu Gabriel Reynolds,2005-02-01 In 385 AH/AD 995 the Qāḍī ‘Abd al-Jabbār, well known for his Mu‘tazilī theological writings, wrote the Confirmation of the Proofs of Prophecy, a work that includes a

creative polemic against Christianity. ‘Abd al-Jabbār reinterprets the Bible, Church history (especially the lives of Paul and Constantine) and Christian practice to argue that Christians changed the Islamic religion of Jesus. The present work begins with an examination of the controversial theory that this polemic was borrowed from an unknown Judaeo-Christian group. The author argues that ‘Abd al-Jabbār’s polemic is better understood as a response to his particular milieu and the on-going inter-religious debates of the medieval Islamic world. By examining the life and thought of ‘Abd al-Jabbār, along with the Islamic, Christian and Jewish antecedents to his polemic, the author uncovers the intimate relationship between sectarian controversy and the development of an Islamic doctrine on Christianity.

Hiera kala Straten,2015-08-24 Hierà kalá presents a collection, analysis and interpretation of the representations of animal sacrifice from ancient Greece. The Archaic and Classical material is dealt with comprehensively. Later evidence is adduced more selectively, for the sake of comparison. All aspects of Greek sacrifice that are (or appear to be) represented in the iconographical material are treated in depth; interpretations are based on a combined study of

the archaeological, the epigraphical and the literary data. Full catalogues of vase paintings and votive reliefs with depictions of sacrifice are included. A generous selection of these are illustrated in more than 200 figures.

Strength of Materials and Structures Carl T. F. Ross, The late John Case, A. Chilver, 1999-08-27 Engineers need to be familiar with the fundamental principles and concepts in materials and structures in order to be able to design structures to resist failures. For 4 decades, this book has provided engineers with these fundamentals. Thoroughly updated, the book has been expanded to cover everything on materials and structures that engineering

students are likely to need. Starting with basic mechanics, the book goes on to cover modern numerical techniques such as matrix and finite element methods. There is also additional material on composite materials, thick shells, flat plates and the vibrations of complex structures. Illustrated throughout with worked examples, the book also provides numerous problems for students to attempt. New edition introducing modern numerical techniques, such as matrix and finite element methods Covers requirements for an engineering undergraduate course on strength of materials and structures

The Derivation of VO and OV Peter Svenonius, 2000-12-21 The Derivation of VO and OV takes a new look at the relationship between head-final or OV structures and head-initial or VO ones, in light of recent work by Richard Kayne and others. The various papers in the volume take different positions with respect to whether one type of structure is derived from the other, and if so, which of the two orders is primary. Different options explored include derivation of VO order by head movement from a basic OV structure, derivation of VO by fronting of a phrasal VP remnant containing only the verb, derivation of OV by fronting of a remnant VP which the verb has vacated, and others. Each paper is

thoroughly rooted in empirical observations about specific constructions drawn either from the Germanic languages or from others including Finnish, Hungarian, Japanese, and Malagasy. The volume consists of eleven original papers by Sjef Barbiers, Michael Brody, Naoki Fukui & Yuji Takano, Liliane Haegeman, Hubert Haider, Roland Hinterhölzl, Anders Holmberg, Thorbjorg Hróarsdóttir, Matthew Pearson, Peter Svenonius, and Knut Tarald Taraldsen, plus an introduction by the editor.
