Rings for the Finger, from the Earliest Known Times to the Present... George F. Kunz,1917

The Finger Angus Trumble,2010 In this collision between art and science, history and pop culture, the acclaimed art historian Angus Trumble examines the finger from every possible angle. His inquiries into its representation in art take us from Buddhist statues in Kyoto to the ceiling of the Sistine Chapel, from cave art to Picasso's Guernica, from Van Dyck's and Rubens's winning ways with gloves to the longstanding French taste for tapering digits. But Trumble also asks intriguing questions about the finger in general: How do fingers work, and why do most of us have five on each hand? Why do we bite our nails? This witty, odd, and fascinating book is filled with diverse anecdotes about cow-milking, the fingerprint of a grave robber in King Tut's tomb, and a woman in Trumble's local bank whose immensely long, coiled fingernails do not prevent her from signing a check. Side by side with historical discussions of rings and gloves and nail varnish are meditations on the finger's essential role in writing, speech, sports, crime, law, sex, and, of course, the eponymous show of contempt.

Finger Gymnastics: Warm-up, Flexibility, Speed & Strength CHARLES H. CHAPMAN,2016-05-24 This book is for all levels and styles of guitarists. The exercises in this book are time-tested and will keep your technique at its optimum while helping to ensure injury-free performance. The online audio recording presents three versions of the exercises in chapters I and II, each version more advanced than the preceding one. In chapter III, bass and rhythm accompaniments are included for many of the examples. Matching the pitch and articulation with a rhythm background will not only assist in warming up, stretching, and building stamina, but will make your practice a more pleasurable experience. Includes access to online audio

Acute and Chronic Finger Injuries in Ball Sports Grégoire Chick,2013-07-09 Neglected finger injuries may lead to chronic lesions that often have detrimental consequences for the practice of a ball sport, whether at a recreational level or at the top athlete level. The initial injury management is crucial. Depending on the type and the severity of the lesions, different people may get involved: the players themselves or their entourage, physiotherapists, club doctors, emergency physicians, family doctors, sports doctors or hand surgeons. Treatment is usually conservative: the long fingers require rapid mobilization to prevent stiffness and contrary to that, the thumb requires stability. Surgery may be necessary to reach these

goals especially for athletes, because of the demands of their sport. Chronic lesions are also in part related to repeated trauma, requiring specialized long-term multidisciplinary treatment. They can often lead to the end of a sporting career, but also may limit the functionality of the fingers at the time of conversion. Dr Chick is Consultant Hand Surgeon in Hôpital de la Tour (Geneva) and Clinique de Genolier, Switzerland, and Visiting Surgeon in Aspetar, Orthopaedic and Sports Medicine Hospital, Doha, Qatar.

Zinc Finger Proteins Shiro Iuchi,Natalie Kuldell,2007-03-06 In the early 1980s, a few scientists started working on a *Xenopus* transcription factor, TFIIIA. They soon discovered a novel domain associated with zinc, and named this domain zinc finger. The number of proteins with similar zinc fingers grew quickly and these proteins are now called C2H2, Cys2His2 or classical zinc finger proteins. To date, about 24,000 C2H2 zinc finger proteins have been recognized. Approximately 700 human genes, or more than 2% of the genome, have been estimated to encode C2H2 zinc finger proteins. From the beginning these proteins were thought to be numerous, but no one could have predicted such a huge number. Perhaps thousands of scientists are now working on C2H2 zinc finger proteins from various viewpoints. This field is a good example of how a new science begins with the insight of a few scientists and how it develops by efforts of numerous independent scientists, in contrast to a policy-driven scientific project, such as the Human Genome Project, with goals clearly set at its inception and with work performed by a huge collaboration throughout the world. As more zinc finger proteins were discovered, several subfamilies, such as C2C2, CCHC, CCCH, LIM, RING, TAZ, and FYVE emerged, increasing our understanding of zinc fingers. The knowledge was overwhelming. Moreover, scientists began defining the term zinc finger differently and using various names for identical zinc fingers. These complications may explain why no single comprehensive resource of zinc finger proteins was available before this publication.
