Creating the Viewer Justin Wyatt, 2024-04-23 A study of the largely hidden world of primary media market research and the different methods used to understand how the viewer is pictured in the industry. The first book on the intersection between market research and media, Creating the Viewer takes a critical look at media companies' studies of television viewers, the assumptions behind these studies, and the images of the viewer that are constructed through them. Justin Wyatt examines various types of market research, including talent testing, pilot testing, series maintenance, brand studies, and new show "ideation," providing examples from a range of programming including news, sitcoms, reality shows, and dramas. He looks at brand studies for networks such as E!, and examines how the brands of individuals such as showrunner Ryan Murphy can be tested. Both an analytical and practical work, the book includes sample questionnaires and paths for study moderators and research analysts to follow. Drawn from over fifteen years of experience in research departments at various media companies, Creating the Viewer looks toward the future of media viewership, discussing how the concept of the viewer has changed in the age of streaming, how services such as Netflix view market research, and how viewers themselves can shift the industry through their media choices, behaviors, and activities.

Principles of Counseling and Psychotherapy Gerald J. Mozdzierz,Paul R. Peluso,Joseph Lisiecki,2009-03-24 This text presents a novel approach to teaching and learning the fundamental skills and techniques of counseling and psychotherapy, based on a non-linear process of thinking that more accurately reflects the reality of mental health practice. At the core of this text lies the idea that to best prepare students for practice with real clients, they have to learn how to think in a new way, the way that research has shown the most effective practitioners think. The result is a paradigm shift in how to teach and learn basic counseling skills, which separates this text from the competition and brings training up to speed with current practice.

Trauma Psychology Elizabeth K. Carll Ph.D.,2007-08-30 These volumes by a team of internationally recognized experts reflect and highlight both recognized and under-recognized events that cause trauma. They also examine current and emerging research on effective interventions to minimize and heal the effects of the trauma. Special attention is also given to culture and context, because what is considered healthy or problematic may vary widely across cultures, and culture can influence people's coping styles. Sources of trauma discussed include stalking, killing, terrorism, torture, kidnap, workplace violence, domestic violence, children and war, fires, floods, AIDS, pain, burns, spinal cord injury, children and medical illness, homelessness, and more. Case examples, treatment recommendations, and public policy recommendations are included in each of the chapters. The growing field of trauma psychology has been spurred recently by natural events from Hurricane Katrina to the Tsunami, and by terrorist events worldwide, as well as chronic health and social issues—from persistent pain to homelessness—that are mounting. The experts offer a gripping overview of the most traumatic and widespread events causing trauma and of the symptoms and health impairment that may result. Most important, they explain how we can best recognize, understand, and treat the sufferers and develop intervention policies.
