**Global Nomads and Extreme Mobilities** Päivi Kannisto,2017-05-15 Presenting a ground-breaking study of the emerging phenomenon of location-independence, this book examines the way in which the practices of 'global nomads', who live on the road, without fixed abode, place of employment or localised circle of friends, question many of the unwritten norms and ideals that characterise settled life in societies. With the lifestyles of global nomads blurring the boundaries between travel, migration, and dwelling, Global Nomads and Extreme Mobilities draws on in-depth interviews with a worldwide group of location-independent travellers, together with virtual and instant ethnography and discourse analysis, to show how lives oriented around extreme forms of mobility offer researchers in migration, tourism and mobilities a unique opportunity for examining the complex subjectivities and power relations associated with multi-mobility. With close attention to the nationalistic, political, and travel-related attachments of global nomads and the ways in which their own representation and justification of their lifestyles and subjectivities constitute a power negotiation, the book examines 'global nomads' social and intimate relationships and the forms of exclusion and discrimination that they encounter, raising the question of whether they live inside or outside societies - and indeed, whether there can be any life outside societies. A re-assessment of much contemporary research in the fields of mobility, migration and tourism studies, Global Nomads and Extreme Mobilities will appeal to scholars across the social sciences.

*Nitrided-steel Piston Rings for Engines of High Specific Power* John H. Collins,Edmond E.

Bisson,Ralph F. Schmiedlin,1944 Several designs of nitrided-steel piston rings were performance-tested under variable conditions of output. The necessity of good surface finish and conformity of the ring to the bore was indicated in the first tests. Nitrided-steel rings of the same dimensions as cast-iron rings operating on the original piston were not satisfactory. The final design was a lighter, rectangular, thin face-width ring used on a piston having a maximum cross-head area and the proper skirt shape. Results were obtained from tests of single-cylinder and multicylinder engines.
