Architectural Graphic Standards American Institute of Architects,Dennis J. Hall,Nina M. Giglio,2016-03-21 The 'Architect's Bible' since 1932, updated with the latest codes and standards Architectural Graphic Standards is the written authority for architects, designers, and building contractors. It provides comprehensive guidance on the visual representation of materials, products, systems, and assemblies. Updated to reflect the most current codes and standards, this new 12th edition features over 300 new drawings, tables, and designs and twenty-five percent new content. In response to architects' feedback and overwhelming demand for a more graphics-heavy format, this edition employs shorter, more accessible texts and more images of the standards and evolution of design and construction. New coverage includes building resiliency and the building envelope, expert discussion on the fundamentals of design and construction documentation, and new examination of environmental factors and material properties and performance. Sustainable Design is no longer separated, but incorporated throughout, and extensive appendices keep useful data right at your fingertips. Graphic standards are essential to building design. They cover everything from door frames and roof designs to air ducts and outdoor sports facilities. This meticulous resource provides a compendium of planning standards, optimum dimensions, and normative construction details. The book is organized into three core sections covering: design and documentation, materials, and building elements. Architectural Graphic Standards features: Key architectural design and production processes—functional planning, environmental assessment, building resiliency, and architectural construction documentation Thorough coverage of materials: concrete, masonry, metals, wood, plastics, composites, and glass An exhaustive survey of building elements—substructures, shells, services, equipment, furnishings, special structures, and siteworks Comprehensive appendixes filled with pertinent data such as: classic architectural elements, mathematical data, and structural calculations Endorsed by the American Institute of Architects, this book has an enduring and unsurpassed reputation for high-quality illustration, text, and graphic design. For crucial information in a user-friendly format, Architectural Graphic Standards is the go-to reference on building design and construction.

Beginning Access 2002 VBA Robert Smith,Dave Sussman,Ian Blackburn,John Colby,Mark Horner,Martin Reid,Paul Turley,Helmut Watson,2004-08-18 What is this book about? Access 2002 is the core database application within the Office XP suite. Using VBA (Visual Basic for Applications), the user can create his or her own programs in what is essentially a subset of the Visual Basic programming language. Using VBA with

Access is a tremendously powerful technique, as it allows you to create great user interfaces (like forms or reports) as a front end to actual data storage and manipulation within the database itself. What does this book cover? This book is a revision of the best-selling Beginning Access 2000 VBA, reworked to provide a rich tutorial to programming Access 2002 with VBA. New material covers the enhanced options in Access 2002 for publishing data to the Web, handling XML, integrating with SQL Server Desktop Engine, and so on. Who is this book for? This book is for the Access user who already has a knowledge of databases and the basic objects of an Access database, and who now wants to learn how to program with VBA. No prior knowledge of programming is required.

*Sustainable Energy in the Built Environment - Steps Towards nZEB* Ion Visa,2014-09-17 This book addresses the main challenges faced today in implementing the Nearly Zero Energy Buildings (nZEB) concept. The book starts with a chapter that addresses problems related to the energy demand and renewable energy sources available in the built environment, along with the restrictions and opportunities in developing sustainable, efficient and affordable solutions, also gaining aesthetic and architectural acceptance. Advanced solutions to cover the energy needs by using various renewable-based energy mixes are presented in two chapters. These two chapters discuss the problem of conversion efficiency at the level of components and systems, aiming at giving value to the variable renewable energy sources, in producing thermal and electric energy. The concept is discussed further in a chapter on advanced solutions for water re-use and recycling wastes as second raw materials. The need for new strategies and implementation tools, for education and training is addressed in the final chapter as part of the nZEB concept, towards sustainable communities. The sub-chapters of the book were openly presented during the 4th Edition of the Conference for Sustainable Energy, held 6-8 November, 2014 and organized by the R&D Centre Renewable Energy Systems and Recycling at the Transilvania University of Brasov, Romania. This event was developed under the patronage of the International Federation for the Promotion of Mechanism and Machine Science (IFTToMM), through the Technical Committee Sustainable Energy Systems.
