Body Bereft Antjie Krog, 2011-05-13 Antjie Krog's iconic status as one of South Africa's most popular and critically-acclaimed poets began when she was eighteen, with her first collection, *Dogter van Jefta* (1970). Almost four decades later, this very different collection will confirm her reputation with poems that blur and ravage the boundaries between the lyrical and confessional, the private and public. *Body Bereft* is a fearless and ecstatic exploration of consciousness on the edge of decay and dissolution. The taboos within the tidal moods of the menopause are described with anger and verbal intensity in a voice that is uniquely Krog's. Close relationships are searingly explored, occasionally seeking conflict, often searching for resolution. In the final meditative section, the personal intensity is tempered, fantastically almost, by contemplations of Table Mountain as a looming, symbolic and androgynous godhead, echoing Adamastor, an abiding presence that endures as it suffers witness - an ostensibly inscrutable, ironically nurturing mirror to self and personal despair. These dramatic, even reckless poems, translated from the simultaneously published *Afrikaans*

Collection, Veweerskrif, bring an altogether new and unique energy to South African English-language poetry.

Troubleshooting SQL Server Jonathan Kehayias, Ted Krueger, 2011 This book describes, diagnoses, and solves the most common problems with SQL Server 2005, 2008, and 2008 R2. The authors explain a basic approach to troubleshooting and the essential tools. They explore areas in which problems arise with regularity: high disk I/O (RAID misconfiguration, inadequate I/O throughput, poor workload distribution, SAN issues, disk partition misalignment); high CPU usage (insufficient memory, poorly written queries, inadequate indexing, inappropriate configuration option settings); memory mismanagement; missing indexes; blocking (caused mainly by poorly designed databases that lack proper keys and indexing, and applications that apply needlessly restrictive transaction isolation levels); deadlocking (Bookmark Lookup, Serializable Range Scan, Cascading Constraint); full transaction logs (lack of log backups, hefty index maintenance operations, long running transaction, problems with replication and mirroring environments); and accidentally-lost data. Finally, the authors discuss diagnosing tools such as the Performance Monitor, Dynamic Management Views, and server-side tracing. -
